The History-the English school  
The precedence of great men

Admit to  
hospital for  
nursing care.

““relatives and  
friends [are]  
generally the  
worst  
attendants” (Gull  
1874).

# Now we use NICE?

- To produce evidence for interventions that are cost effective.
- NICE works if there are RCT effectiveness studies with cost effectiveness added i.e. HTA funded studies for network analysis.
- Problem: Evidence based practice: also clinician knowledge (what sort of case & patient preference)
- Problem- Only one HTA funded study (Gowers et al 2007, 2010).
- Problem- Can you do RCT on the use of a parachute.
