20 JANUARY 2024

Philosophy Special Interest Group of the Royal College of Psychiatrists

EDITION 53

Dear colleagues,

Welcome to the latest edition of the Philosophy SIG newsletter in a new format. As we enter 2024. let's take a moment to pause and reflect on the past year. For the philosophy SIG, it was a particular year with mixed emotions. We arranged two in-person events with mixed results. The interdisciplinary workshop on phenomenological psychopathology in April 2023 was a success, with attendees providing positive feedback. Unfortunately, our November 2023 in-person cocreation event did not generate enough interest, resulting in its cancellation. Several factors may have contributed to this, with one being the growing preference for online events due to their reduced cost, accessibility, and ability to provide on-demand access. For 2024 we have already planned 3 events. The first two events are collaborations with fellow SIGs. first one shows a collaboration with the HOPSIG and is just round the corner. it will take place as an online webinar on the 1st of February and is titled "Psychiatry, Society, and the State; The end of political neutrality?". The second one is a collaboration with EPSIG and will host Dr Iain McGilchrist on the 5th of April for an afternoon full of stimulating conversations. For October 2024 we will organise our annual conference on AI and Psychiatry. The event will take place online and we aspire to create a memorable event that will offer multiple perspectives on the impact of AI systems in our professions and mental health in general.

The Philosophy SIG looks for a new financial officer. There is still time to apply. For more info look at the <u>Special Interest Group</u> <u>Elections page.</u> The deadline is the 26th of January.

Event Announcements

On February 1st, 2024, there will be an online webinar co-organised with HOPSIG titled Psychiatry, Society and the State; The end of **Political neutrality?** The webinar will explore whether professional neutrality is outdated and a renewed professional activism is necessary. The event will feature George Ikkos and Jed Boardman, who will provide a comprehensive review of the history of British psychiatry and examine the impact of inequalities and social exclusion of people with mental health conditions. The event will also include a panel discussion with the **Royal College Registrar Trudi Seneviratne, Prof Rob Poole, and Prof Femi Oyebode** followed by a Q&A session.

On April the 5th 2024, the PHILSIG co-hosts with the EPSIG a half-day in-person event with Dr Iain McGilchrist. The title of the event is "The nature and importance of brain asymmetry; an afternoon with lain McGilchrist". Dr Iain McGilchrist is a retired psychiatrist and clinical director. He was previously an Oxford don in English_literature. He has authored a number of major works that have attracted worldwide attention. These include 'The Master and his Emissary' and 'The Matter with Things'. He is widely considered one of the pre-eminent thinkers of our time. This event will include presentations by Dr McGilchrist followed by open discussion. There is a limited number of places for this event so book early to avoid disappointment.

Editorial

2023 has been a year of change, as all years are and going to be, but somehow it felt different this time. Capturing this experience of difference in concrete propositional terms is arguably an elusive task. From a phenomenological standpoint, the difference appears to emerge from a shift in the perceived temporal flow of the emerging conditions of possibility for intersubjective life. The main disruptive quality in the experience of our shared lifeworld is that of accelerated pace of change.

When looking at the future, a business-as-usual temporal flow provides us for the most part with the ability to assimilate, adapt and change while maintaining a feeling of being attuned, and, to some degree, informed agents of it. The sped-up pace with which in 2023 the discourse on artificial intelligence and its impact in almost all forms of social life dominated, made it be a different year. Regardless of utopian/messianic claims or complete dismissal around its true potential, there is no doubt that the "coming wave", to use the title of the recent book by Deep Mind cofounder Mustafa Suleyman, will have profound effects on our everyday lives. The amount of intellectual and financial capital invested in the field is expected to increase significantly in coming years. According to an estimate by <u>Goldman Sachs</u> there is an exponential increase in ivestments in the field that will lead to wide adoption in the second half of the decade.

The promises and perils of AI Multimodal AI of the likes of Google LAMs (Large Action Models-AI agents) expanding field of possibilities, bring horizon a degree of uncertainty and future that exercises a gravitational There are already disruptive effects in professional practice, and the job market. systems will learn and mimic human proportionate effects in the fabric of principles of resource efficiency and highest value. Past Events

Philosophical psychopathology: Bridging descriptive accounts with first person perspectives: An interdisciplinary workshop 6th of April 2023- Royal College of Psychiatry

Prof Femi Oyebode

The "Philosophical Psychopathology Workshop" received positive feedback. Participants found the concepts and ideas explored interesting. The overall experience was rated as excellent by 63% and very good by 25%. A significant 88% found the content highly relevant to their interests and needs. Attendees appreciated the integration of phenomenological philosophy and psychopathology in psychiatric practice, with 56% finding it extremely valuable and relevant. Participants enjoyed the exposure to presenters who are not psychiatrists, the opportunity for interdisciplinary discussions, and the interactive format. Suggestions for improvement included more time for group discussions, better structured breakout sessions, and the creation of an environment that enhances participation from attendees. These are all helpful suggestions and will take them into consideration in planning similar events in the future.

Future events

<u>Philosophy SIG and HoPSIG event | Psychiatry, Society and the State:</u> <u>The end of political neutrality?</u> <u>Ist of February 2024 – online webinar</u>

George Ikkos

Are politics and psychiatry inextricably linked? Historically, professions have both been expected and seen themselves as being above the explicitly political arena. The reality is that politics has always been crucial to provide care, most obviously seen perhaps with the foundation of the NHS and the policies of

deinstitutionalization.

Jed Boardman

In recent decades there has been an overwhelming accumulation of evidence that social factors, often summarised as structural inequalities, are hugely influential both in health in general and in mental health in particular. With respect to mental health, they are crucial both in the generational morbidity and the provision of

services.

This event aims to explore whether the idea of professional neutrality has run its course and whether the time has come for a renewed professional activism in psychiatry and mental health.

In this event George Ikkos, joint editor of Mind State and Society; Psychiatry and Mental Health in Britain 1960–2010 (Society of American Publishers PROSE silver award in category of science, medicine and technology, 2022) will review the history of British psychiatry since the 1960s in its social and political context with a view to responding better to today's demands. Jed Boardman, joint author of Social Inclusion and Mental Health; Understanding Poverty, Inequality and Social Exclusion, will examine the social exclusion of people with mental health conditions and the inequalities in mental health services provision.

Trudi Seneviratne, RCPsych Registrar, Prof Rob Poole and Prof Femi Oyebode will provide commentary followed by an extensive Q&A session

Please note: The College is politically neutral and any political opinions or statements made by individuals during this event do not represent the views of the College.

Future Events

<u>PhilSIG and EPSIG event | The nature and importance of brain asymmetry;</u> <u>an afternoon with Iain McGilchrist</u> 05th of April 2024 at the Royal College of Psychiatry

Dr Iain McGilchrist

This is an exciting event and a rare opportunity to dive into Ian McGilchrist's impressive interdisciplinary effort and how it relates to our profession as psychiatrists. Here is an overview of the programme:

1pm – 2pm – Registration and coffee 2pm – 2.05pm – Introduction, Dr David Geaney 2.05pm – 3.30pm – Session 1: 'Hemisphere theory and the implications for psychiatry', Chaired by Dr Annie Swanepoel.

This session will be primarily based in neurology and neuroscience. It will address the important advances made in understanding brain asymmetry, its evolutionary origins, and the light it casts on aspects of neuropsychological functioning in different kinds of mental illness. It will also deal with its implications for phenomenology and the nature of the human mind, and ask how this might influence the diagnosis and treatment of patients.

Your 3.30pm – 3.45pm – Coffee break

5.45pm – 5.15pm – Session 2: 'The philosophical implications for the humane practice of medicine', Chaired by Dr Tassos Dimopoulos

This session will discuss the wider philosophical implications for the way we regard clinical practice both in psychiatry and more generally in medicine: the influence of models, the need for integrating different approaches, the significance of context and relationship, and ultimately how we see the human being and human life itself. 5.15pm – Event Close THE MATTER WITH THINGS UTH THINGS Our Brains, Our Delusions, and the Unmaking of the World IAIN MCILCHRIST VOLUME 1:

6pm – 8.30pm – Dinner (for those who have booked this option)

Events by other providers

<u>Events advertised in the International Network of Philosophy and Psychiatry website</u> Several events are taking place in the near future that can be of interest to many of you. Great destinations and themes to attend.
