

Fluoxetine

Antidepressant

Your medication

Fluoxetine

What is this leaflet for?

This leaflet is to help you understand more about your medicine.

Your medicine could look different to the pictures on this leaflet.

Fluoxetine is also called Prozac.

Fluoxetine is available as capsules and liquid.

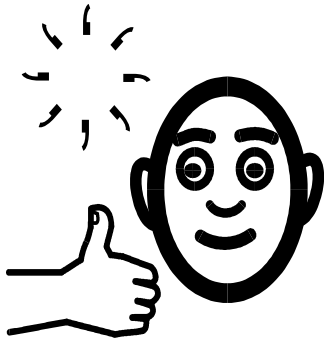

What is Fluoxetine used for?

Fluoxetine is commonly used to treat depression.

It is also used in:

- People having repetitive thoughts or behaviours
- People feeling tense or angry

Fluoxetine

What will Fluoxetine do?

Fluoxetine should help you feel calm and relaxed.

It could take a few weeks for Fluoxetine to have its full effect.

What are the side effects of Fluoxetine?

Side effects are the unwanted effects of any medicine on the body.

Not everyone taking a medicine will get side effects.

Many side effects will go away with time. But some side effects may last for longer.

Some side effects can be serious.

You should tell your doctor if you have any side effect.

Fluoxetine

Some side effects are more serious.

You should tell someone straight away if...

- you feel dizzy
- you feel shaky
- you have problems with passing water
- you have a rash on your skin or your skin feels itchy.

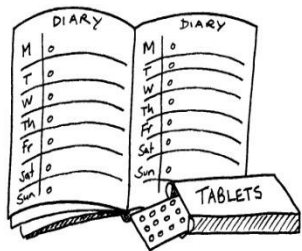

Other side effects of Fluoxetine can be...

- feeling restless or cannot sit still
- feeling sleepy or sluggish
- feeling sick
- having problems sleeping at night
- having the 'runs' or needing the toilet a lot
- dry mouth
- headache
- loss of interest in sex

Fluoxetine

How and when do I take Fluoxetine?

The label on your Fluoxetine packet should tell you when and how much you should take.

If you forget to take your medicine

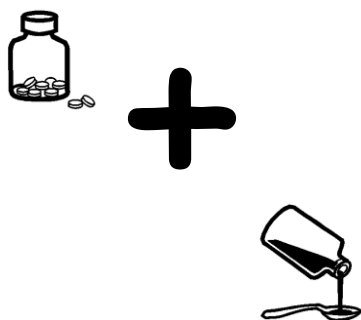

Tell your carer or doctor straight away.

When to stop taking Fluoxetine?

You should carry on taking your medicine unless your doctor asks you to stop.

Fluoxetine

Some medicines do not work well together.

You should tell your doctor about any other medicines you are taking.

What should I not do while taking Fluoxetine?

Drinking alcohol when you are on Fluoxetine could make you feel drowsy.
