Overview

This interactive second conference in the ‘Deteriorating Patient’ series will address new challenges and topics for the psychiatrist and other mental health professionals. Key topics will be covered including recognising sepsis, safe management of rapid tranquillisation, drugs and alcohol withdrawal as well as endocrine and oncology emergencies. Clinical scenarios will be used to illustrate talks and time has been allocated for interactive discussions.

This one-day event will be a great opportunity for psychiatrists whether consultant, staff grade or trainees to refresh their knowledge about acute illness and to learn from experts across medicine.
