

# Rethinking social media addiction:

## The importance of mechanisms for diagnosis and treatment

by Lukas Gunschera

# Conflicts of interest: none

# “Social Media Addiction”

Turner et al. (in preparation), Vandershuren & Everitt (2004), Young (1998)

**47%** of adolescents report feeling addicted to social media

**Addiction** is implicated in our thinking and conversations about social media.

- Frequent behaviour with potential negative consequences
- Treatment approaches (detox)
- Addiction treatment centres

# Measurement

Brown (1993), Griffiths (1996, 2005)

SALIENCE

MOOD MODIFICATION

CONFLICT

TOLERANCE

WITHDRAWAL SYMPTOMS

RELAPSE

# Measurement

Andreassen et al. (2016), Cataldo et al. (2022), Brown (1993), Griffiths (1996, 2005)

## SALIENCE

“You spend a lot of time thinking about social media or planning how to use it”

## MOOD MODIFICATION

“You use social media in order to forget about personal problems”

## CONFLICT

“You use social media so much that it has had a negative impact on your job/studies”

## TOLERANCE

“You feel an urge to use social media more and more”

## WITHDRAWAL SYMPTOMS

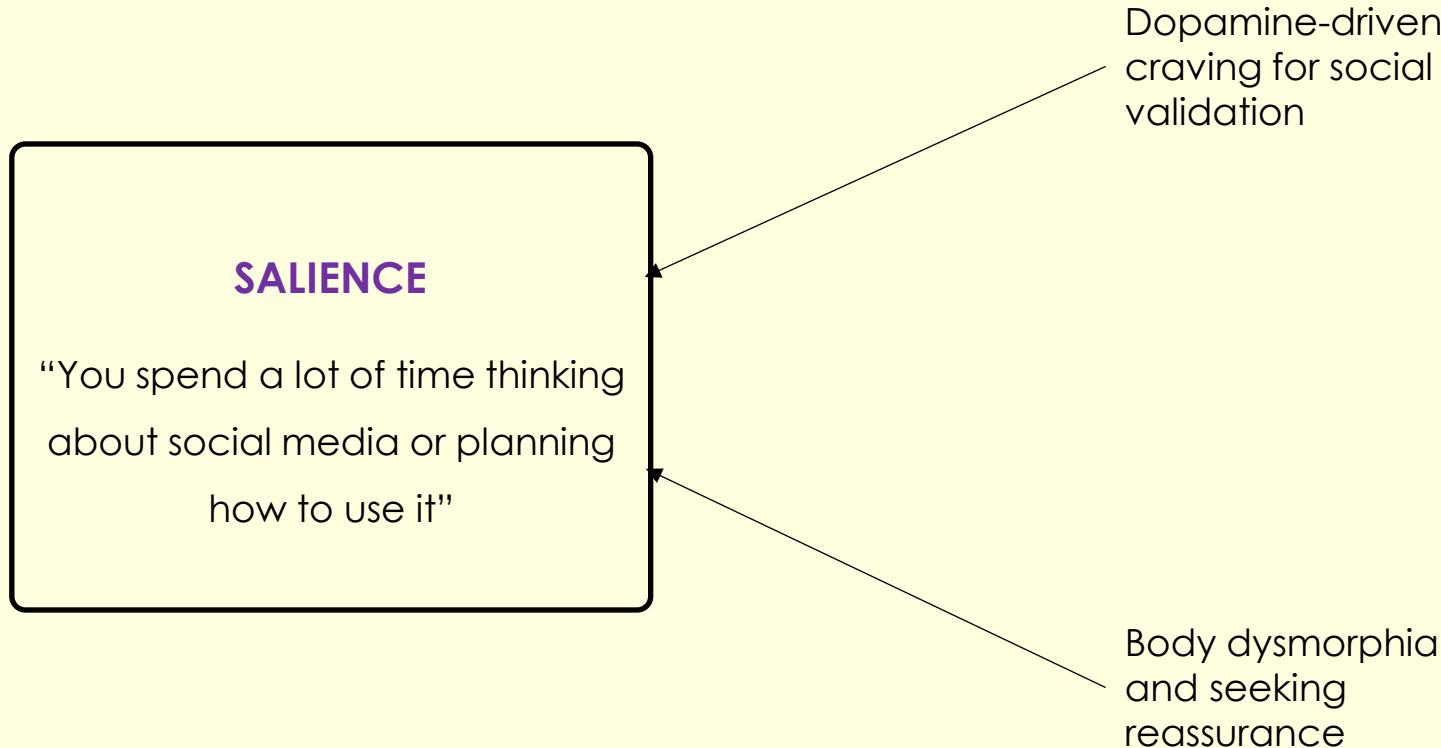

“You become restless or troubled if you are prohibited from using social media”

## RELAPSE

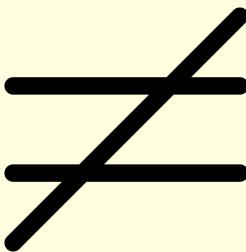

“You have tried to cut down on the use of social media without success”

# Measurement

Andreassen et al. (2016), Brown (1993), Griffiths (1996, 2005)

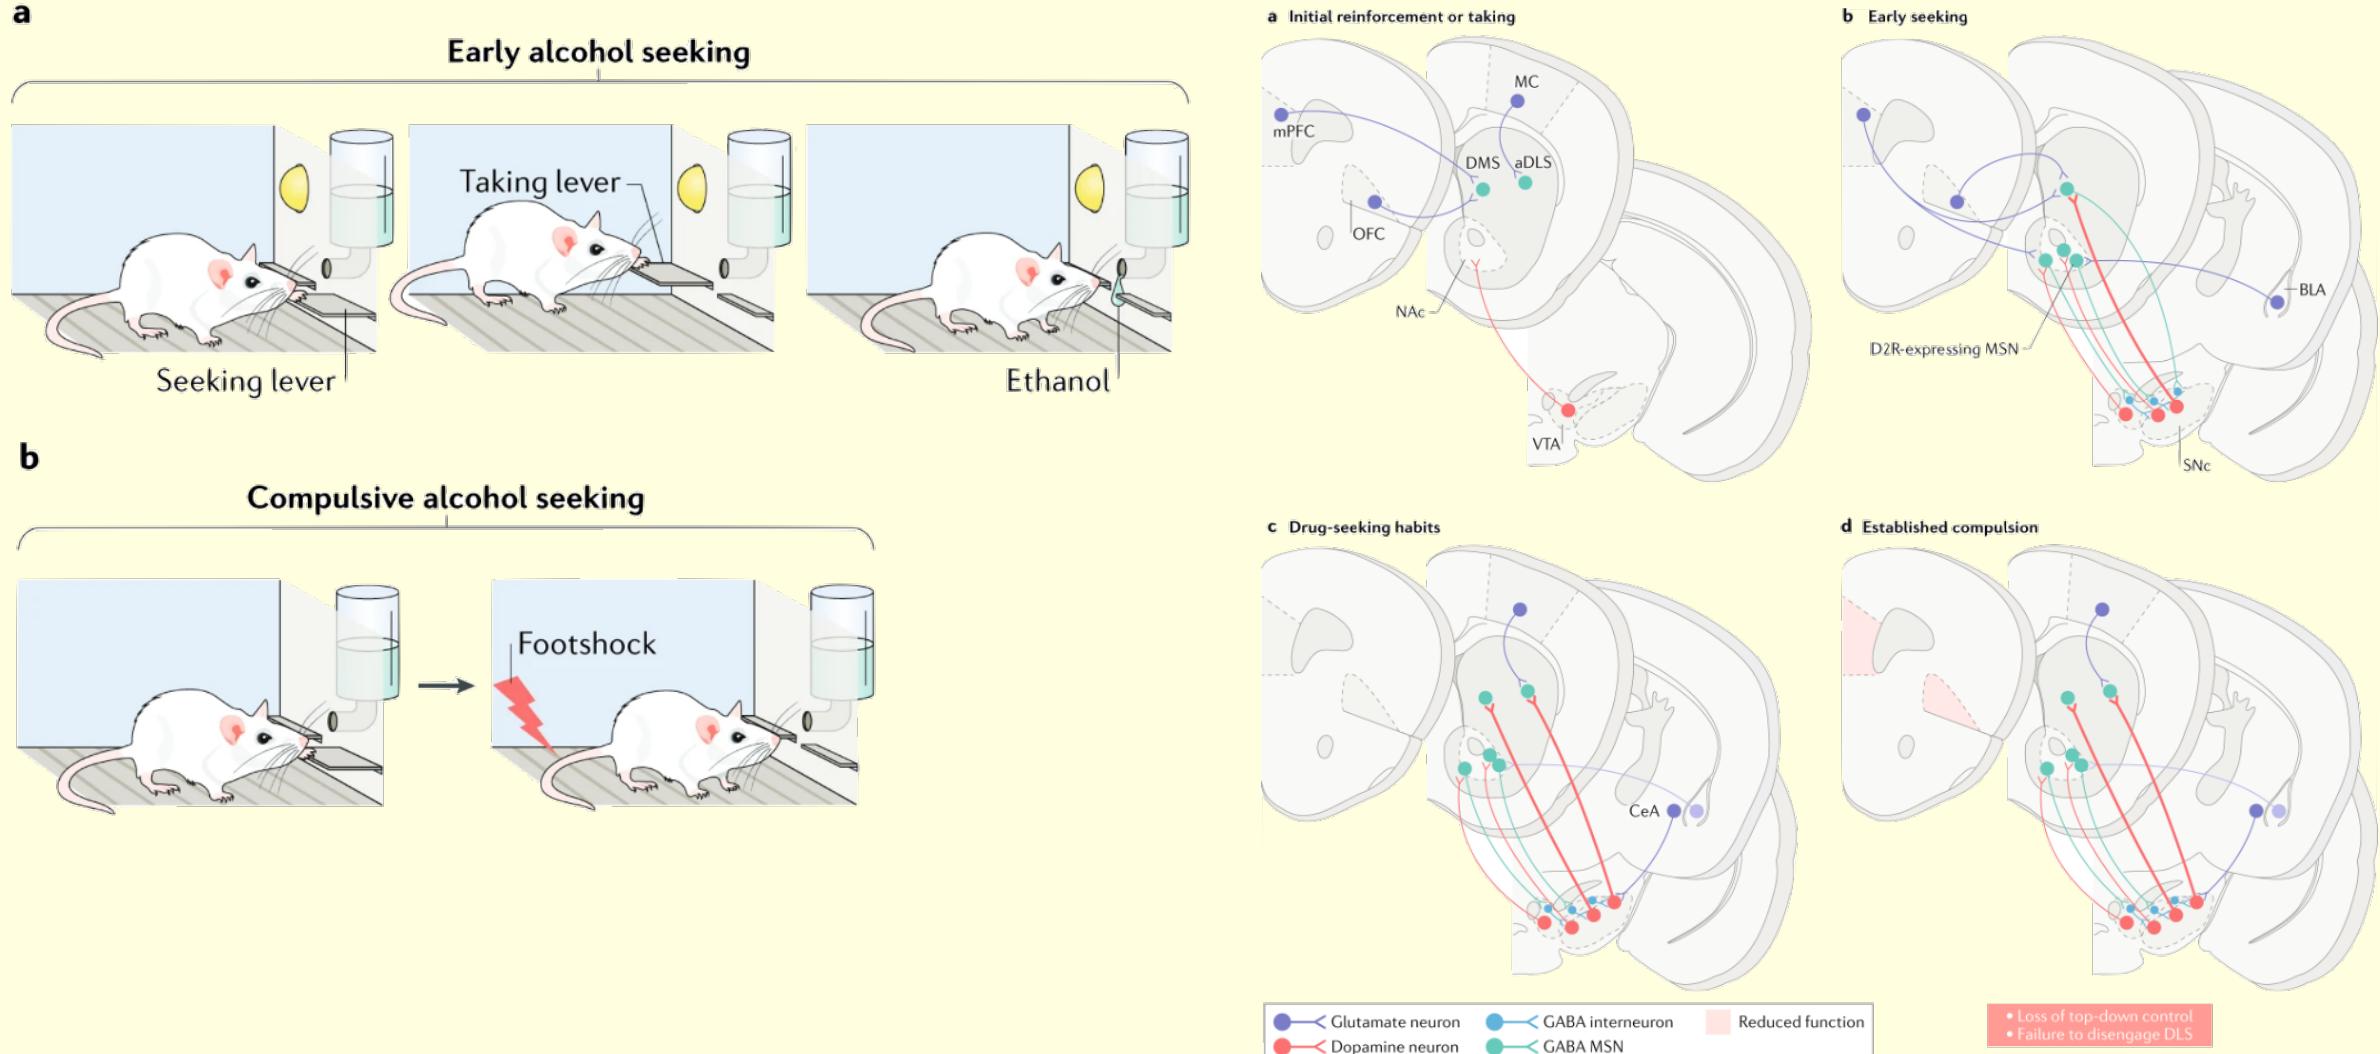

Phenotypic similarity

Mechanistic similarity

# Mechanisms of Addiction

Luescher et al. (2020)

# Mechanistic Approach

Berridge & Kringelbach (2015), Thomsen et al. (2014), Hellberg et al. (2019), Pool et al. (2016)

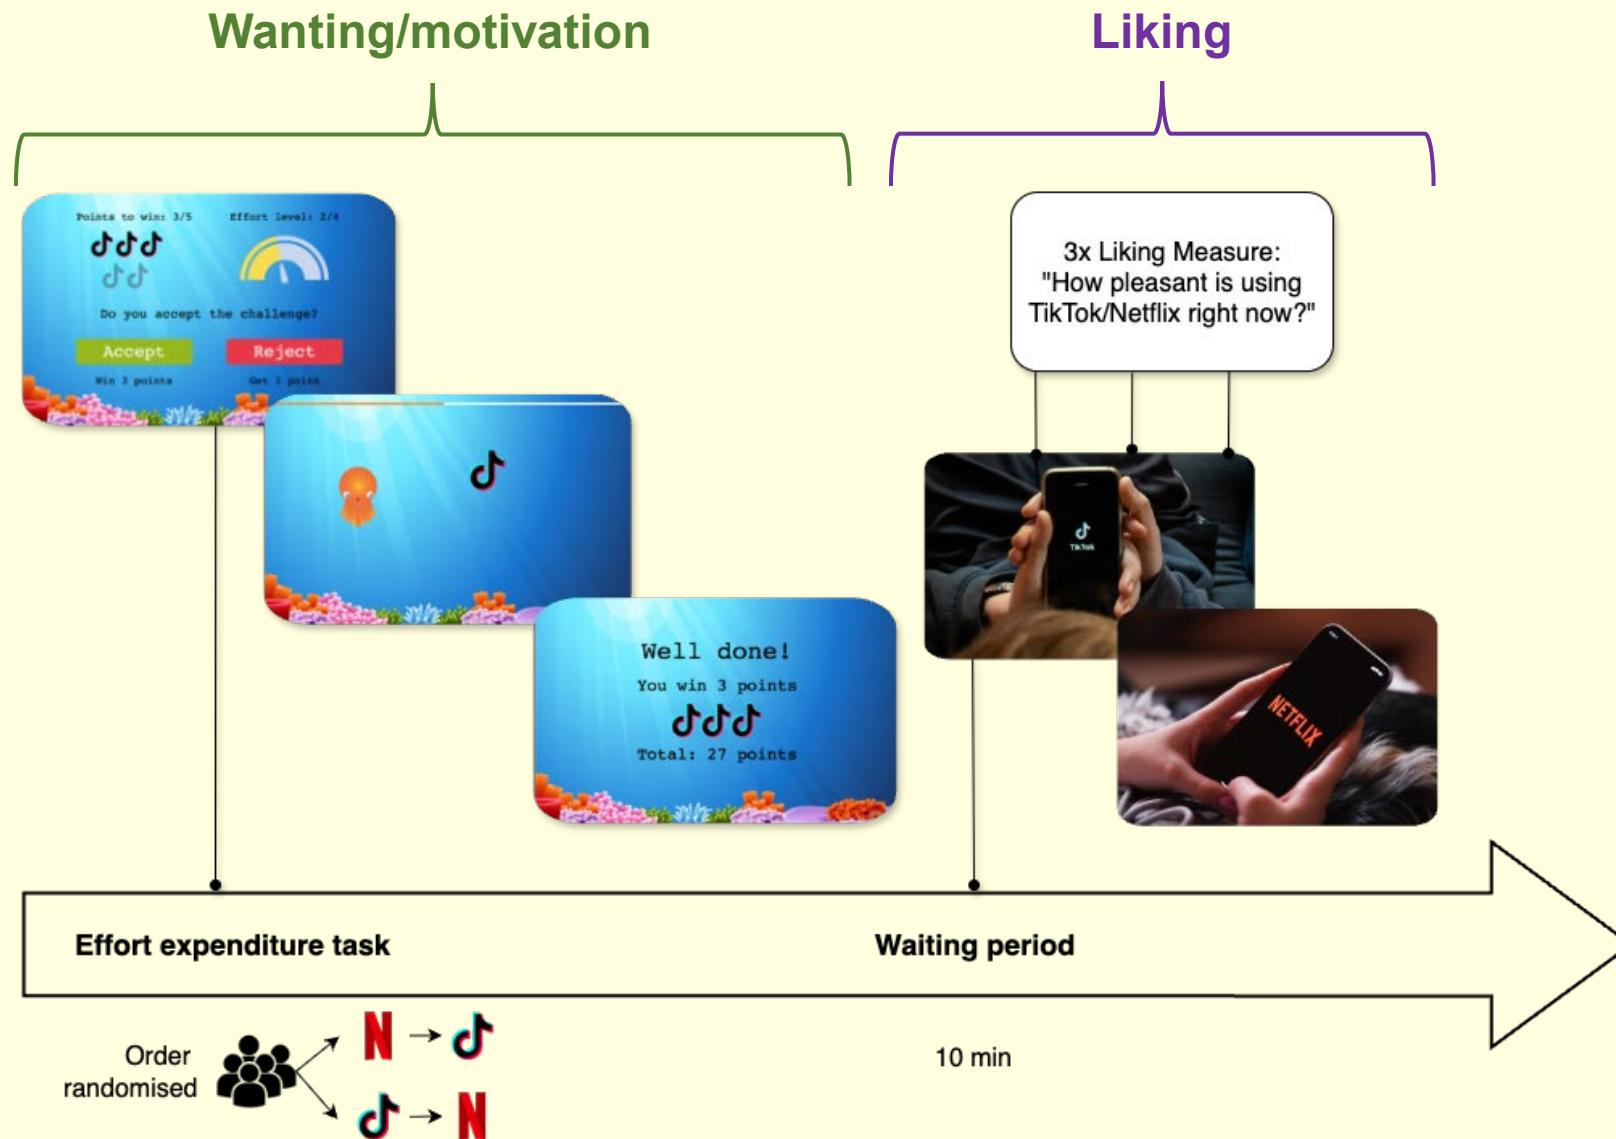

## RESEARCH QUESTION

Can we measure incentive sensitisation  
in social media users

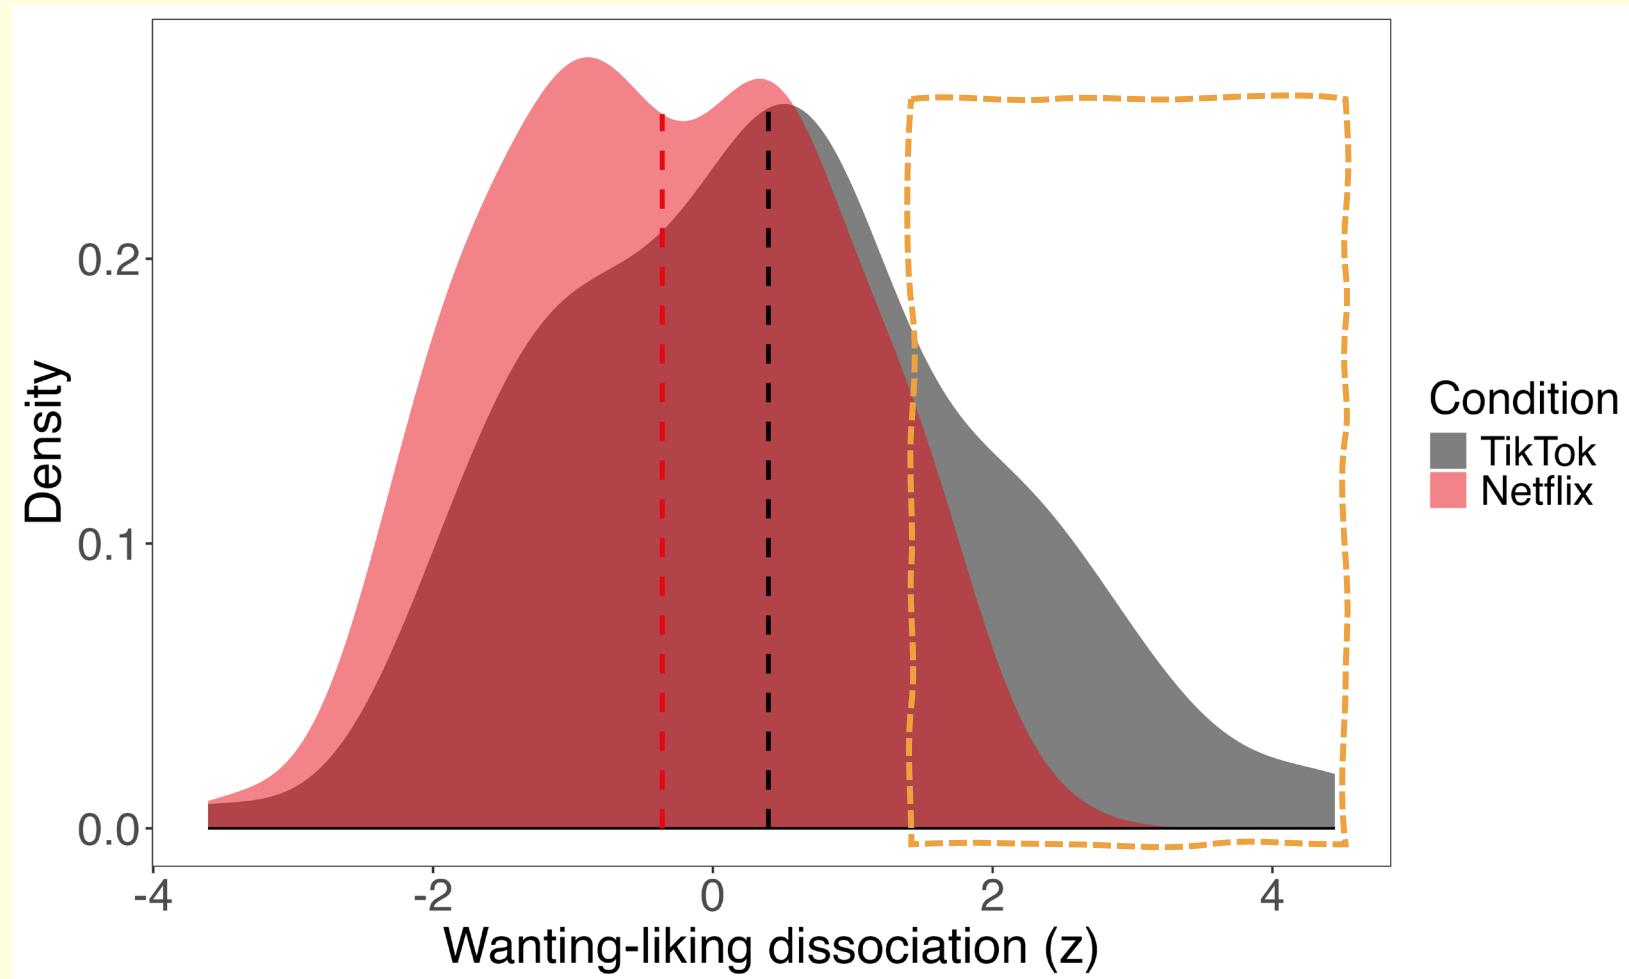

# Research Design

Gunschera et al. (in preparation)

# Dissociation is more pronounced for TikTok

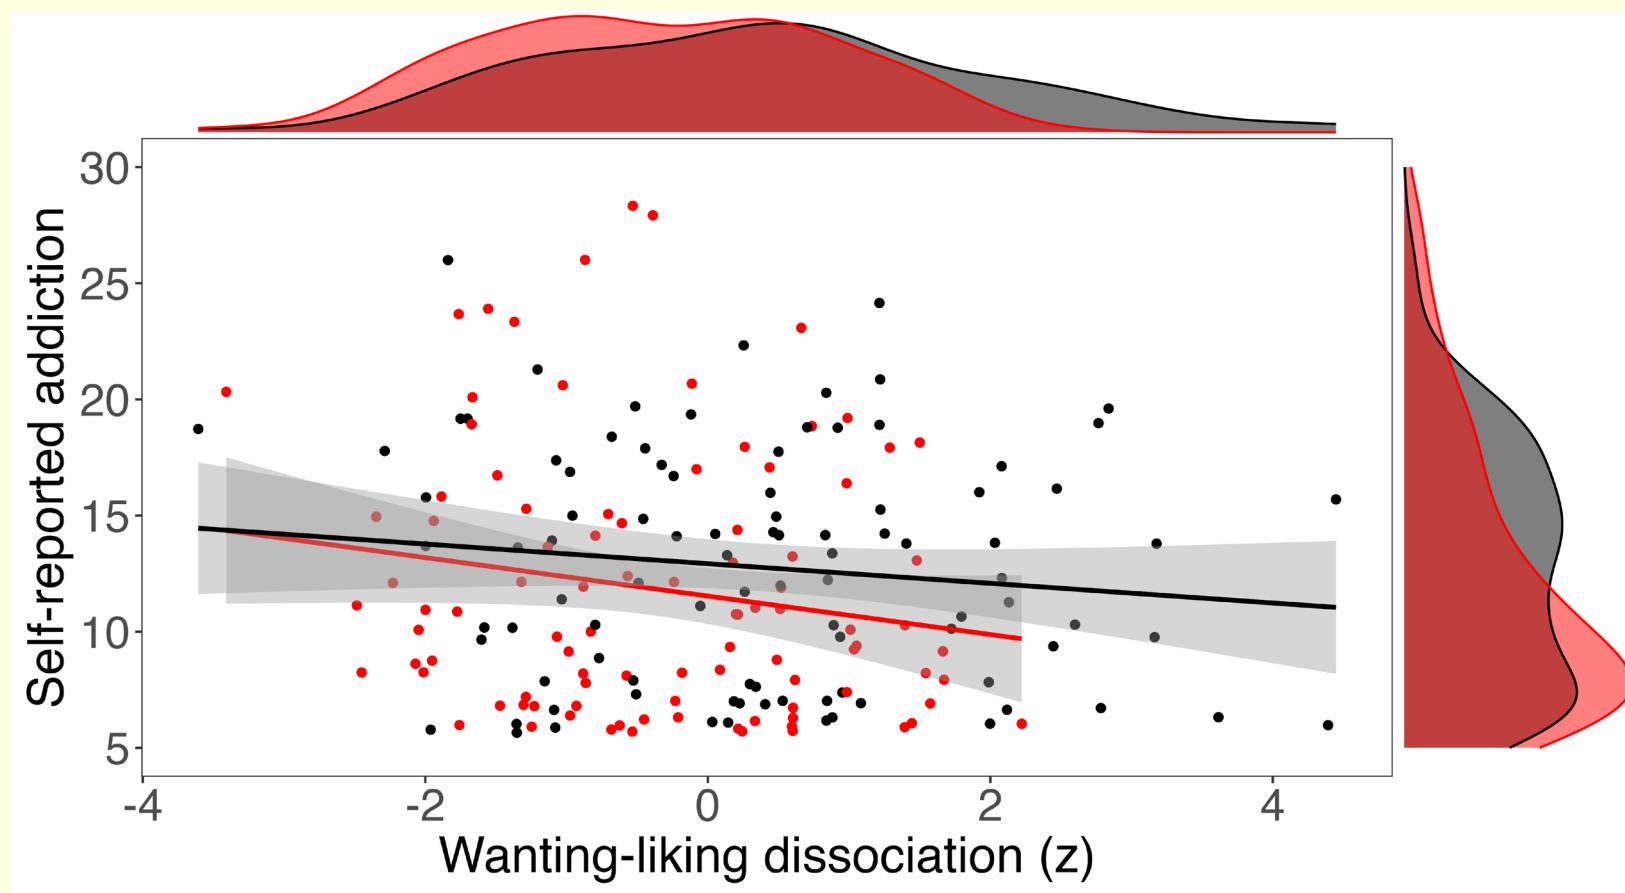

Gunschera et al. (in preparation)

Paired-samples *t*-test:  $BF_{01} = 121.207$ ; 95% CI [0.350, 1.092].  
Cohen's  $d = 0.404$

# Dissociation does not relate to self-reported addiction

Gunschera et al. (in preparation)

$BF01 = 0.884$ ,  $r = -0.158$ , 95% CI [-0.341, 0.038]  
Cohen's  $d = -0.130$

# Summary

## THEORETICAL RELEVANCE

Many adolescents feel addicted  
to social media

## MEASUREMENT

Measurement approaches are  
ad-hoc and lack validation

## MECHANISM

We need mechanistic  
approaches to disentangle  
symptoms and mechanisms

# Upcoming Research

## MECHANISM

Examine mechanistic manipulations using psychopharmacological drugs

## LIVED EXPERIENCE

Determine experiences and outcomes relevant to individuals who report feeling addicted

## CLINICAL UTILITY

Evaluate the clinical utility of experiences used to measure social media addiction using a Delphi approach with clinicians
