

NAD NATIONAL AUDIT OF DEMENTIA

National Audit of Dementia 2023 Annual Dementia Statement

What is the Annual Dementia Statement?

The Annual Dementia statement collects information about your hospital relating to care provision and monitoring of the quality of care for people with dementia.

The output is a series of statements demonstrating the achievement and progress your hospital has made in its work to ensure a good standard of care. You will be able to download this as a poster.

This tool is divided into sections: Admissions, Assessment, Discharge, Feedback about the care provided to people with dementia, Governance, Staff Expertise and Training, Nutrition and Environment.

Some of the information required can be uploaded from the results of your casenote audit (these are greyed out and you cannot enter information into these fields). The rest of the information you are required to input.

The information can be inputted in any order, and you can save and come back to it up until the deadline of **13 November 2023**.

Only **ONE** ADS can be completed per hospital. Please decide with your colleagues who will take the lead on completing this form.

Questions and Guidance for the Annual Dementia Statement

Guidance shown below is found within the tool itself, by the side of each question (hover over the blue question mark) **with the exception of 5.2-5.3** - guidance for this is shown separately at the end of the list of questions below.

	Question	Guidance
	Admissions	Culdulice
1.1	How many admissions (overall) do you have within a year (past year) in your hospital?	This should be all admissions to the hospital , up to the last completed quarter
1.2	How many of these admissions were people with dementia?	This should be all admissions of above coded with any dementia code
1.3	Percentage of people with dementia admitted to the hospital	This will be calculated using the Total Number of patients identified, during your data collection period This percentage will be calculated automatically
1.4	Do dementia leads in your hospital think that most people with dementia are identified during admission?	
1.5	Can you estimate a proportion of people with dementia who may not be identified during admission?	
	Assessments	
2.1- 2.4		These percentages will be calculated and uploaded by the NAD Team, from the patient record information submitted in your last data collection period
	Discharge	
3.1	Percentage of patients who had discharge planning started within 24 hours of admission	These percentages will be calculated and uploaded by the NAD Team, from the patient record information submitted in your last data collection period
3.2	Median length of stay	These percentages will be calculated and

Q5.2 and 5.3 Mini-audit of people with dementia who had a completed personal information document:

For this question, you will need to select three wards which have a high proportion of admissions of people with dementia. You could establish this by:

- a. Comparing admissions over a single month, e.g. May 2023, or
- b. Holding a discussion with MDTs to get feedback on which wards have
- most patients of highest dependency due to cognitive impairment, or
- c. A combination of the above.

Once you have selected your wards, carry out the mini audit as in **Q5.2 – Q5.3**:

- Identify eligible patients across the three wards (see inclusion/exclusion criteria below).
- Organise the list in alphabetical order by surname.
- Review notes of the first 10 patients and check for the presence of a personal information document or other scheme.

You only need to include 10 patients **overall**, and not 10 for each ward. If you would like to include more than 10, that is fine.

Inclusion and Exclusion criteria

Please note that you should **only** include patients with diagnosed or known dementia. You **should not include**:

- Patients where dementia is recently suspected and unknown to family or carers
- Patients with dementia without communication problems (i.e. people with dementia who can make their needs and preferences known without the aid of a personal information document)
- Newly admitted patients whose admission is too recent for the information to have been collected from family or carers (e.g. if your target for having the information in place is 72 hours, exclude patients admitted for a shorter time)
- Patients where the information document has been given to a family member/carer to complete, and not yet returned.
