Many thanks to Hwyl for permission to use the cover artwork. Hwyl is an art project run by Dementia Matters in Powys (DMiP) and Arts Alive Wales based at the Brecon War Memorial Hospital. The project focuses on working with elderly patients on hospital wards, with their families, carers, the ward staff and artists on a weekly basis.

With thanks to Rhiannon Davies (DMiP) and Tessa Waite (Arts Alive Wales).

## Introduction to the appendices

This is the appendices for your local report. Your local report is in a separate document. The appendices present data from Round 3 of the National Audit of Dementia, both at a national level and for your hospital. Data for your hospital in Round 2 is also shown where applicable. When comparing Round 2 data with Round 3 data, please be aware that differences in sample sizes and slight wording changes to some questions, can affect results in both rounds. Therefore, conclusions made from comparing the data should be with caution. Hospitals with less than five returns for the carer or staff questionnaires have not received any data and returns of 5 to 9 questionnaires have not received demographic information. The table below shows how the data tables in the appendices are laid out and what information you can find in each cell.

Std no. [Type]	Question number and text		National audit Round 3: % Num/Den	Your hospital Round 3: % Num/Den	Your hospital Round 2: % Num/Den
Standard reference and type. Standards document can be found on the <a href="#">audit website</a> .	Question number. Orange items in the casenote audit appendix show low inter-rater reliability.	Question wording as in tool.	The national audit refers to all hospitals from England and Wales that participated in the Round 3 audit.	Data for your hospital from Round 3.	If the same question or a similar question was asked in Round 2, we have provided your Round 2 response for comparison. The carer and staff questionnaires are new tools and therefore this column has been excluded in these appendices.
			We have provided the percentage 'yes' response (unless otherwise indicated) and the numerator/denominator. The denominator will change throughout the appendices, depending on whether questions were routed (not asked in some instances), 'N/A' responses were chosen (these have been excluded from the analyses), or where staff and carers did not respond.		

For the organisational checklist, data from 199 hospitals are included in the national audit column (all the registered participants).

195 hospitals participated in the casenote audit, returning 10047 casenotes and this is shown in the national audit column. The national audit column for the casenote audit also shows the median and the inter quartile range for each question (where applicable). Question items which were found to have lower agreement in the inter-rater reliability analysis (see audit [website](#)) have been coloured orange.

196 hospitals returned carer questionnaires. Data from all questionnaires (4664) is presented in the carer questionnaire data tables in Appendix E.

198 hospitals returned staff questionnaires. Data from all questionnaires (14416) is presented in Appendix G. For some questionnaire items, the data for the two most positive answers have been combined, as well as being presented separately. This is provided both at a national level and for your hospital.

## Appendix H: Staff suggestions for your hospital

The staff questionnaire included a question asking staff to make one suggestion on how their hospital could improve care and support provided to people with dementia. Below, all suggestions from staff at Glan Clwyd Hospital are provided.

### Registered Nurses (Band 5 or 6)

Additional support staff, more stimulation; TV, radios, etc.
All staff need to have training then they would understand the needs of this patient group.
At the cancer centre we have access to a 24hr kitchen and if patients request food out of kitchen hours snacks can be prepared by staff who have done the food handling course, I believe this access would help especially on care of elderly wards even if access could be via vending machine with coded access for ward.
By ensuring sufficient staffing levels!!! It also would be good if there was a specialist role that ensure people with dementia receive some form of additional support, i.e. in form of activities, allowing them to wander under supervision etc. Often, patients with dementia are accommodated in a single room without even a TV or window to distract.
Ensuring adequate staffing levels!!! Frequently it is not really possible to accommodate the needs and preferences of our patients with dementia due to staff shortages and the lay-out of the ward (e.g. isolated single rooms without windows/ TV).
Give nursing staff more time with their patients. Short-staffed most shifts and patients' needs are not always met, despite our best efforts. We have dementia support but (s)he is often used as a healthcare support workers due to staffing issues and the ward activity is high.
I have not seen a mental health support worker/specialist on the ward other than psychiatric liaison but that is only if we ask them to attend. I don't know how to contact any dementia specialist or who they are, office hours etc... more information provided to staff for support would be welcomed.
More activities.
More awareness and time for staff to attend.
More dementia support nurses.
More staff to be able to spend more time caring for their needs as dementia patients often require more time and complex care.
Not move them about from ward to ward at unsociable hours. Ensure an honest handover to ensure you are prepared for any difficulties you may encounter. More dementia support workers available to provide activities for patients especially when the ward acuity is high and patients need additional interaction.
Should be a few dementia nurses on ward as ward never free from patients with dementia.
We should have registered mental health nurses making up the team on our ward. I think we should have a dementia specific menu e.g. sandwiches/ finger foods etc.

### Registered Nurses (Band 7 or above)

Change the training from eLearning to face to face learning where questions can be answered!!! eLearning has become a paper exercise.
Dementia nurse for every ward as it has had such a positive impact on my ward.
Improved communication with family, carers and relatives are essential so as to manage expectations but also to ensure we are delivering the correct level of patient specific care so as to avoid harm. The majority of

## Registered Nurses (Band 7 or above)

our falls are usually associated with elderly patients who have a degree of cognitive impairment and therefore to keep these patients safe from harm i.e. falls, services need to be developed to provide the ward with support and assistance particularly where the acuity and dependency is high.

Improved environment, management support of this group of patients' special needs, supportive therapy and activities.

Increased availability of specialist staff, out of hours availability of specialist trained staff.

More dementia specialist nurses to visit clinical areas to support and guide.

More out of hours support - problems seem to arise out of hours when there is no support.

More staff. Better training...not eLearning.

Need more dementia assistants, improve community services so patients can be discharged sooner.

One to one care when possible is so helpful when the patient is particularly confused or disorientated and creates a better environment for the patient, their family, other patients and also staff.

Pleasanter surroundings.

Snack availability, not moving patients in night time hours.

Ward staff (all grades) released from wards to attend dementia meetings/ support group which is held monthly.

## Healthcare Assistants

By having a rotation all the time on the ward of dementia nurses -greatly needed.

By having more dementia support workers on all wards/ floors. Safer and more appropriate settings/ wards.

Having cover 24 hours.

Having dementia activities coordinator on the war has been a big help.

More close observation by staff who have an interest and knowledge in dementia.

More dementia support workers on a late shift and at weekends.

More dementia support workers please.

More staff on wards would mean HCAs could spend more time with dementia patients.

More staff would enable more time and better care for the patients.

More training for staff- staff aren't always trained in dementia care as it's not always seen as mandatory.

Need more dementia staff!

Provide further and in depth training - more people such as myself need this and needs to be mandatory. All wards work to their 100% but staffing is an issue and needs to be addressed.

We have very little in the way of stimulation on the ward, we do have a dementia activity room off the ward but that may not always be accessible to all patients. The ward would benefit from televisions in each bay and every cubicle.

## Doctors

By bringing [in a] specialist dementia nurse who can guide and train nurses to deal with dementia patients in hospital.

Education for staff on regular basis about dementia.

## Doctors

Electronic records between hospital & community would improve continuity.

Get patients to appropriate wards (care of the elderly) at the earliest opportunity and minimise number of ward transfers and out of hours ward transfers (which all increase delirium).

Making better provision for one-to-one care for older adults with dementia and challenging behaviour.

More cues for orientation such as large clocks with a date including day of the week and month.

More frequent access to psychiatry liaison nurse/ consultant psycho-geriatricians.

More in-house training.

More time/ one to one care.

More training/ education of staff regarding dementia care.

Study day and formal training for staff on dementia.

## Allied Healthcare Professionals

Complete 'This is Me' booklet and encourage family to bring photos in so that you can engage with the individual. Write down for people to see if you find a patient enjoys craft, they have a dog, or holding hands, so working relationships can be formed by whoever sees them.

Have dementia nurses to monitor patients with dementia all over the hospital. Dementia counsellors to be available to educate family and friends on diagnosis of dementia.

More staff would help. Also, one-to-one care would help.

## Students

More dementia support workers and more education e.g. good practice sharing.

## Therapy Assistants & Allied Healthcare Professional Assistants

Dementia champions lists need updating. Champions meetings in the past have been repetitive. Dementia activities coordinator works day times - need more of them to provide more ward support. Dementia care pathways need implementing earlier.

More staff/ activity.

## Ward-based Administrators

Better communication with patients giving them time and understanding to let them feel at ease while in hospital.
