Many thanks to Hwyl for permission to use the cover artwork. Hwyl is an art project run by Dementia Matters in Powys (DMiP) and Arts Alive Wales based at the Brecon War Memorial Hospital. The project focuses on working with elderly patients on hospital wards, with their families, carers, the ward staff and artists on a weekly basis.

With thanks to Rhiannon Davies (DMiP) and Tessa Waite (Arts Alive Wales).

Introduction to the appendices

This is the appendices for your local report. Your local report is in a separate document. The appendices present data from Round 3 of the National Audit of Dementia, both at a national level and for your hospital. Data for your hospital in Round 2 is also shown where applicable. When comparing Round 2 data with Round 3 data, please be aware that differences in sample sizes and slight wording changes to some questions, can affect results in both rounds. Therefore, conclusions made from comparing the data should be with caution. Hospitals with less than five returns for the carer or staff questionnaires have not received any data and returns of 5 to 9 questionnaires have not received demographic information. The table below shows how the data tables in the appendices are laid out and what information you can find in each cell.

Std no. [Type]	Question number and text		National audit Round 3: % Num/Den	Your hospital Round 3: % Num/Den	Your hospital Round 2: % Num/Den
Standard reference and type. Standards document can be found on the audit website .	Question number. Orange items in the casenote audit appendix show low inter-rater reliability.	Question wording as in tool.	The national audit refers to all hospitals from England and Wales that participated in the Round 3 audit.	Data for your hospital from Round 3.	If the same question or a similar question was asked in Round 2, we have provided your Round 2 response for comparison. The carer and staff questionnaires are new tools and therefore this column has been excluded in these appendices.
			We have provided the percentage 'yes' response (unless otherwise indicated) and the numerator/denominator. The denominator will change throughout the appendices, depending on whether questions were routed (not asked in some instances), 'N/A' responses were chosen (these have been excluded from the analyses), or where staff and carers did not respond.		

For the organisational checklist, data from 199 hospitals are included in the national audit column (all the registered participants).

195 hospitals participated in the casenote audit, returning 10047 casenotes and this is shown in the national audit column. The national audit column for the casenote audit also shows the median and the inter quartile range for each question (where applicable). Question items which were found to have lower agreement in the inter-rater reliability analysis (see audit [website](#)) have been coloured orange.

196 hospitals returned carer questionnaires. Data from all questionnaires (4664) is presented in the carer questionnaire data tables in Appendix E.

198 hospitals returned staff questionnaires. Data from all questionnaires (14416) is presented in Appendix G. For some questionnaire items, the data for the two most positive answers have been combined, as well as being presented separately. This is provided both at a national level and for your hospital.

Appendix H: Staff suggestions for your hospital

The staff questionnaire included a question asking staff to make one suggestion on how their hospital could improve care and support provided to people with dementia. Below, all suggestions from staff at Chelsea & Westminster Hospital are provided.

Registered Nurses (Band 5 or 6)

By having a larger dementia team.

Get more family involved in meal time. Get more family/carers to complete "this is me" book on admission.

Improve staffing.

More training (rather than just a video) and support on extra needs of dementia patients. Especially on night shifts where they can disturb other patients. More support with staffing (trained staff) when necessary.

People with dementia could feel better if they could experience lunch/ dinner together in a group. It will be helpful to create a coloured pathway in the ward with big and clear signals and as we'll have more leisure activity for people with dementia, it will be helpful to create an information desk with staff members that give support and teaching to families with relatives with dementia. I think we could have more selection of food, in order to meet the demands of the patients taste and preferences.

The ward is a noisy fast moving environment, often causing increased levels of stress and disorientation for our patients, we need to look at our environment and patient mix to see how we can improve the patient experience.

Registered Nurses (Band 7 or above)

Bespoke dementia care training. Dementia case manager to attend multidisciplinary team meetings.

Managers on the general wards need to acknowledge that patients with dementia are complex and can require a huge amount of extra support, and they need to be willing to be flexible and try to find extra staff to help these patients be well cared for (as opposed to saying that we will be a zero-agency trust which is inflexible and unrealistic). These patients need help with the fundamentals of nursing care and unfortunately that is the first thing to go when there isn't time; it is difficult provide respectful and dignified care when you can't access more staff as needed.

More staff to allow us to do what is needed for patients we care for.

More training.

Restrict evening bed moves.

Healthcare Assistants

A brief handout on patient day-to-day routine, personal likes, dislikes etc.

Doctors

Dementia specialist nursing service should be more developed to provide care and support to the patients and the families. Additional staff/ volunteers required to help with feeding of patients with dementia.

Dementia team having more direct involvement with ward staff and patients/ family.

Doctors

Encourage patients/ next of kin to fill out this is me paperwork.

Provide continuity of medical and nursing care from initial admission through to discharge and outpatient follow up, with good liaison between secondary and primary care and with social services. Often, ambulant patients with no significant acute illness are brought to A&E by police/ DNS/ social carers and detained in hospital as 'vulnerable' and it is deemed that an acute hospital is a place of safety. IT IS NOT A SAFE PLACE FOR [PEOPLE WITH] DEMENTIA. Rapid community support at home available 365 days a year is required for quick return home of dementia sufferers, with well-trained support. Often the need [for nutritional support] is identified, and dietitian support provided, but the assistance with feeding/ eating and drinking is variable. More emphasis and volunteer support is required.

Specialist dementia nurse. Patient passport if unable to communicate – past medical history, past occupation, likes, dietary requirements.

Allied Healthcare Professionals

Dementia specialist nurse for guidance especially with complex discharge planning. I have used hospital dementia passports in previous trusts. Better training for staff about how to manage people with dementia - I would say feeding can be an issue especially when patients are physically quite able but perhaps not able to remember, or know how to eat/ drink.

More dementia specialist rooms/ environments and resources on the wards and in clinic areas to enable staff to utilise these when working with people with dementia.

Students

Have out of hours help. There is no support out of 9-5 that is specialised to dementia, no dementia clinical nurse specialist in this hospital.
