Many thanks to Hwyl for permission to use the cover artwork. Hwyl is an art project run by Dementia Matters in Powys (DMiP) and Arts Alive Wales based at the Brecon War Memorial Hospital. The project focuses on working with elderly patients on hospital wards, with their families, carers, the ward staff and artists on a weekly basis.

With thanks to Rhiannon Davies (DMiP) and Tessa Waite (Arts Alive Wales).

## Introduction to the appendices

This is the appendices for your local report. Your local report is in a separate document. The appendices present data from Round 3 of the National Audit of Dementia, both at a national level and for your hospital. Data for your hospital in Round 2 is also shown where applicable. When comparing Round 2 data with Round 3 data, please be aware that differences in sample sizes and slight wording changes to some questions, can affect results in both rounds. Therefore, conclusions made from comparing the data should be with caution. Hospitals with less than five returns for the carer or staff questionnaires have not received any data and returns of 5 to 9 questionnaires have not received demographic information. The table below shows how the data tables in the appendices are laid out and what information you can find in each cell.

Std no. [Type]	Question number and text		National audit Round 3: % Num/Den	Your hospital Round 3: % Num/Den	Your hospital Round 2: % Num/Den
Standard reference and type. Standards document can be found on the <a href="#">audit website</a> .	Question number. Orange items in the casenote audit appendix show low inter-rater reliability.	Question wording as in tool.	The national audit refers to all hospitals from England and Wales that participated in the Round 3 audit.	Data for your hospital from Round 3.	If the same question or a similar question was asked in Round 2, we have provided your Round 2 response for comparison. The carer and staff questionnaires are new tools and therefore this column has been excluded in these appendices.
			We have provided the percentage 'yes' response (unless otherwise indicated) and the numerator/denominator. The denominator will change throughout the appendices, depending on whether questions were routed (not asked in some instances), 'N/A' responses were chosen (these have been excluded from the analyses), or where staff and carers did not respond.		

For the organisational checklist, data from 199 hospitals are included in the national audit column (all the registered participants).

195 hospitals participated in the casenote audit, returning 10047 casenotes and this is shown in the national audit column. The national audit column for the casenote audit also shows the median and the inter quartile range for each question (where applicable). Question items which were found to have lower agreement in the inter-rater reliability analysis (see audit [website](#)) have been coloured orange.

196 hospitals returned carer questionnaires. Data from all questionnaires (4664) is presented in the carer questionnaire data tables in Appendix E.

198 hospitals returned staff questionnaires. Data from all questionnaires (14416) is presented in Appendix G. For some questionnaire items, the data for the two most positive answers have been combined, as well as being presented separately. This is provided both at a national level and for your hospital.

## Appendix H: Staff suggestions for your hospital

The staff questionnaire included a question asking staff to make one suggestion on how their hospital could improve care and support provided to people with dementia. Below, all suggestions from staff at Chorley & South Ribble Hospital are provided.

<b>Registered Nurses (Band 5 or 6)</b>
Additional staffing to accommodate dementia patients' needs.
By having dedicated dementia champions on the ward. The trust could have dedicated dementia nurses within the trust to visit and support both staff and patients on the wards on a daily basis.
Dependency of patient should automatically equate to more staff.
Emergency Department need to look into care of dementia patients.
Extra staffing for end of life care.
Further training and champions.
Further training for all staff not just the staff that show an interest in dementia.
Given longer to eat meals before kitchen staff want to collect trolley/ trays.
Have designated activity coordinator at all times. More helpers at mealtimes.
Having more staff on the ward so it would enable us to give more 1-1 care.
Improved use of information from family and care homes to ensure "forget me notes" are completed on all dementia patients. Ensure everyone is aware of "forget me not" and ask for passports from resident homes when they are to be admitted. I feel we sometimes come up short on nutrition at times, handover needs to be improved at times.
It is other visitors of patient's who present problems when they meet patients with dementia as they can be rude within hearing of the patient. Staff try to minimise these potential problems by explaining that all patients need treating with respect and if necessary asking the relative to leave the room while they explain.
More staff to help with nutritional needs. A lot more training for wards who do not specialise in care of the elderly. Possibly open visiting, especially at mealtimes for family of the patients.
More training, more staff.
Not moving patients with dementia from one ward to another at night time.
Recruitment of more staff who are competent in dealing with dementia patients.
Some staff are not trained in the support of dementia patients and lack the requirements needed to provide the correct care down to the way they address them and communicate with them. Training for all staff should be compulsory.
Staff.
The hospital has very good policies in place - unfortunately due to high pressures on the wards and very poor staffing, it is hard to give the best standard of care to patients living with dementia which I believe is out of our hands. Specific dementia wards/ hospitals need to be put in place to care for and support them safely and appropriately.
We could have regular meetings as a team to discuss how we can improve the care dementia patients receive within a hospital setting. We could develop a specific care plan which outlines the patient's activities of daily living which require assistance from ward staff, for example regular toileting, assistance with meals, sit down friendly chats during the day, etc. We could encourage family and friends of the patient to come into hospital as an open visit access and they could help provide basic care to relieve the pressures of ward staff as we are a very busy acute medical ward.

## Registered Nurses (Band 5 or 6)

When patients come in from care homes, if they had a document with them that looks at their likes/ dislikes and any other useful information to avoid further distress to the patient. The more information we have the better to ensure individualised care.

## Registered Nurses (Band 7 or above)

I have bought some sticky back hooks for the sides of patients' beds which I am going to hand the forget me not forms off. The forms will be hung on the hooks inside out if they need completing (so any member of staff can see it still needs completing) and hung up closed when complete with the flower showing. This should make the forms easily accessible for all staff to quickly find and read to find out patient likes and dislikes and be able to personalise care. We are also starting to provide luncheon clubs weekly (sitting patients away from their bedsides in the dining room at dinner time) to encourage nutritional intake and to encourage a social occasion and get patients away from their bedsides for a change of scene. I feel that more staff to help assist with encouraging oral fluids would help. I think the patients do get adequate assistance at mealtimes but need encouraging more constantly throughout the day.

More access to finger foods outside of mealtimes.

The elective pathways in the hospital work well for patients with additional requirements. Communication is excellent between pre-operative and unit areas prior to admission and as such all necessary arrangements are made prior to admission, which hopefully leads to a seamless pathway for the patient and their family.

## Healthcare Assistants

Additional staff who are familiar with the patient would be a huge help.

Additional staffing would enhance the care provided. Releasing time to care for patients. Less paperwork, more care. Being able to provide more stimulating activities to enhance their stay, make them less fearful and help them remember.

All grades of staff to complete work books and allow new staff to complete the workbooks, they really do enhance patient care.

Faster referral to appropriate unit to better meet the needs of the patient.

I think as a medical assessment unit, we work really well together and do a good job in helping dementia patients. However, I do think there could be more training available.

Involving families and carers more because sometimes it can be simple things in which the patient may seem agitated and it could just mean they don't like certain sex of staff i.e. males looking after females.

It is an ongoing process caring and supporting dementia patients as needs change with each patient. In my opinion, there should be a dementia unit staffed by trained dementia staff and a different environment from a normal ward. Dementia patients in a general ward can be disruptive and cause anxiety, sleepless nights for the rest [of the] patients. Obviously, there is no quick fix as this condition comes in many different guises and in the end it is the individual patient who matters.

It would be beneficial that care plans are always available when dementia patients are admitted, and if none are available then a hospital care plan made up with favourites meals and likes and dislikes. Also, a dementia menu to be set in place such as finger foods cocktail sausages, sandwiches, desserts. Better communication with families also so that everyone is aware of the plans and updates of the patient.

More information.

More staff.

## Healthcare Assistants

More time for patients to help those with dementia have familiarisation to provide more efficient care. There is not enough staff to accommodate dementia needs. Need additional staff for better care. Feel free to send helpers to assist with needs of those with dementia.

More training - more time to train. Need more food alternatives for small appetites.

Provide a more varied interaction space, allow them to choose the meals they are used to, give them things to do during the day.

Provide more staff to allow the time to do things with patients such as activities.

Use of "forget me not" leaflet. All staff need to be more aware of this valuable tool which can help identify the individual needs and preferences/ history of the dementia patient who requires extra input. More variety of finger foods need to be available.

## Doctors

Diagnosed patient with cognitive impairment promptly with dementia to avoid unnecessary hospital admissions for 'worsening confusion'. Need more nursing staff to provide better care for patients with dementia e.g. feeding, washing/ changing.

More staff designated to one on one care.

Need more support and help from mental health teams, social services to place the patients in appropriate settings. Need more trained staff for enhanced care when needed.

## Allied Healthcare Professionals

Less ward moves to help reduce exacerbation of disorientation.

## Students

By having companion volunteers to spend time sitting and talking to the patients.

By having companion volunteers to take time and get to know them. Also by having family to bring in familiar things into hospital such as pictures.

## Therapy Assistants & Allied Healthcare Professional Assistants

*No comments from therapy assistants and allied healthcare professional assistants for your hospital.*

## Ward-based Administrators

More staff to provide one-to-one care. More opportunity to remember the past and talk about the way the person used to be and enjoy their likes and hobbies.
