Many thanks to Hwyl for permission to use the cover artwork. Hwyl is an art project run by Dementia Matters in Powys (DMiP) and Arts Alive Wales based at the Brecon War Memorial Hospital. The project focuses on working with elderly patients on hospital wards, with their families, carers, the ward staff and artists on a weekly basis.

With thanks to Rhiannon Davies (DMiP) and Tessa Waite (Arts Alive Wales).

Introduction to the appendices

This is the appendices for your local report. Your local report is in a separate document. The appendices present data from Round 3 of the National Audit of Dementia, both at a national level and for your hospital. Data for your hospital in Round 2 is also shown where applicable. When comparing Round 2 data with Round 3 data, please be aware that differences in sample sizes and slight wording changes to some questions, can affect results in both rounds. Therefore, conclusions made from comparing the data should be with caution. Hospitals with less than five returns for the carer or staff questionnaires have not received any data and returns of 5 to 9 questionnaires have not received demographic information. The table below shows how the data tables in the appendices are laid out and what information you can find in each cell.

Std no. [Type]	Question number and text		National audit Round 3: % Num/Den	Your hospital Round 3: % Num/Den	Your hospital Round 2: % Num/Den
Standard reference and type. Standards document can be found on the audit website .	Question number. Orange items in the casenote audit appendix show low inter-rater reliability.	Question wording as in tool.	The national audit refers to all hospitals from England and Wales that participated in the Round 3 audit.	Data for your hospital from Round 3.	If the same question or a similar question was asked in Round 2, we have provided your Round 2 response for comparison. The carer and staff questionnaires are new tools and therefore this column has been excluded in these appendices.
			We have provided the percentage 'yes' response (unless otherwise indicated) and the numerator/denominator. The denominator will change throughout the appendices, depending on whether questions were routed (not asked in some instances), 'N/A' responses were chosen (these have been excluded from the analyses), or where staff and carers did not respond.		

For the organisational checklist, data from 199 hospitals are included in the national audit column (all the registered participants).

195 hospitals participated in the casenote audit, returning 10047 casenotes and this is shown in the national audit column. The national audit column for the casenote audit also shows the median and the inter quartile range for each question (where applicable). Question items which were found to have lower agreement in the inter-rater reliability analysis (see audit [website](#)) have been coloured orange.

196 hospitals returned carer questionnaires. Data from all questionnaires (4664) is presented in the carer questionnaire data tables in Appendix E.

198 hospitals returned staff questionnaires. Data from all questionnaires (14416) is presented in Appendix G. For some questionnaire items, the data for the two most positive answers have been combined, as well as being presented separately. This is provided both at a national level and for your hospital.

Appendix H: Staff suggestions for your hospital

The staff questionnaire included a question asking staff to make one suggestion on how their hospital could improve care and support provided to people with dementia. Below, all suggestions from staff at New Cross Hospital are provided.

Registered Nurses (Band 5 or 6)

Additional staff support.

Elderly care wards should have their "space" for people with dementia to walk around and a common space with some kind of activity to keep them "busy". We should have always some staff (bank or not) that can provide 1 to 1 care with difficult patients.

Keeping staffing at adequate levels and not moved to other wards. As we have more staff due to ward need. Elderly wards same layout as C22 dementia ward (i.e. bigger, garden, day room), better diagnosis by doctors.

More activities for patients to take part in.

More staff needed - also need one to one. Ten patients to one nurse and one HCA is too much. Need more staff. Stop taking staff off our busy ward to work on other short wards when we are short ourselves. Encourage family to bring in food or fill out menu.

More support for families if they visit to stay with their loved one e.g. over night.

More than 1 dementia ward. We have a lot of patients with dementia, but don't always have time to take time to care - patients without dementia miss care due to high patient demand.

Need to expand dementia ward.

Social care placement, no urgency.

Support workers or volunteers to spend time with patients. Encourage visitors to attend at mealtimes to assist with meals.

The majority of the time there is not enough staff to allow time to interact with people with dementia.

Registered Nurses (Band 7 or above)

My ward operates with HCAs 1:10 patients and can sometimes require looking after 1:3 patients with reduced cognition/ dementia which does not allow us to complete extracurricular activities or time.

Staffing levels need increasing on care of elderly and the ward environment needs improving to increase the experience.

Healthcare Assistants

If caring for dementia patient on a one-to-one basis, I feel all attention to be given just on the one-to-one. Not to deliver care to nine other patients and care of the one-to-one, it's impossible.

If every ward had a specially trained nurse or HCA to forward the information to dementia team because most of the time it takes a long time for someone to come over and we don't [know how] to deal with patients especially if they are aggressive.

Increase staffing levels. Provide more training.

More activities/ sensory room/ objects that they enjoy, more variety.

Healthcare Assistants

More staff so you could have the time to spend with the patients when they are not on dementia ward. Our ward is having more things for dementia patients at present i.e. activities.

More staffing on ward with dementia than the standard nursing got [to] look above and [beyond] the national levels for staff and better care of people.

Sometimes more staff to be able to give a dementia one-to-one time. To settle the patient properly by spending time with them.

We could do with more dementia trained staff. When we have over 50% of the ward confused and wandering which is most of the time. Extra hands and skills would be utilised and appreciated.

When needed, it would be beneficial to have extra staff on shift when dealing with specific patients with dementia.

Doctors

It takes time for dementia outreach to review a patient once referral is made.

Reducing movements of patients between wards, especially at night.

Allied Healthcare Professionals

Our hospital does pretty well given NHS constraints, but there needs to be greater understanding of dementia [among] medics and surgeons (nurses are better I think), who frequently don't seem to fully appreciate the holistic needs of someone with dementia.

Staff to be person centred and encourage patients' independence. Have an established multidisciplinary team - dementia outreach to assist patients on medical wards with dementia.

Students

Send patients to the relevant ward, don't just treat them differently because they have dementia.

Therapy Assistants & Allied Healthcare Professional Assistants

No comments from therapy assistants and allied healthcare professional assistants for your hospital.

Ward-based Administrators

More training for all staff.

Other / Unknown

As a volunteer working on an elderly care ward improved identification of patients with dementia together with, for example, of their likes and dislikes, would enable me to more easily care for them.

More staff - for example, dementia support workers who could support taking dementia patients home on discharge to keep calm and keep settled.
