Many thanks to Hwyl for permission to use the cover artwork. Hwyl is an art project run by Dementia Matters in Powys (DMiP) and Arts Alive Wales based at the Brecon War Memorial Hospital. The project focuses on working with elderly patients on hospital wards, with their families, carers, the ward staff and artists on a weekly basis.

With thanks to Rhiannon Davies (DMiP) and Tessa Waite (Arts Alive Wales).

Introduction to the appendices

This is the appendices for your local report. Your local report is in a separate document. The appendices present data from Round 3 of the National Audit of Dementia, both at a national level and for your hospital. Data for your hospital in Round 2 is also shown where applicable. When comparing Round 2 data with Round 3 data, please be aware that differences in sample sizes and slight wording changes to some questions, can affect results in both rounds. Therefore, conclusions made from comparing the data should be with caution. Hospitals with less than five returns for the carer or staff questionnaires have not received any data and returns of 5 to 9 questionnaires have not received demographic information. The table below shows how the data tables in the appendices are laid out and what information you can find in each cell.

Std no. [Type]	Question number and text		National audit Round 3: % Num/Den	Your hospital Round 3: % Num/Den	Your hospital Round 2: % Num/Den
Standard reference and type. Standards document can be found on the audit website .	Question number. Orange items in the casenote audit appendix show low inter-rater reliability.	Question wording as in tool.	The national audit refers to all hospitals from England and Wales that participated in the Round 3 audit.	Data for your hospital from Round 3.	If the same question or a similar question was asked in Round 2, we have provided your Round 2 response for comparison. The carer and staff questionnaires are new tools and therefore this column has been excluded in these appendices.
			We have provided the percentage 'yes' response (unless otherwise indicated) and the numerator/denominator. The denominator will change throughout the appendices, depending on whether questions were routed (not asked in some instances), 'N/A' responses were chosen (these have been excluded from the analyses), or where staff and carers did not respond.		

For the organisational checklist, data from 199 hospitals are included in the national audit column (all the registered participants).

195 hospitals participated in the casenote audit, returning 10047 casenotes and this is shown in the national audit column. The national audit column for the casenote audit also shows the median and the inter quartile range for each question (where applicable). Question items which were found to have lower agreement in the inter-rater reliability analysis (see audit [website](#)) have been coloured orange.

196 hospitals returned carer questionnaires. Data from all questionnaires (4664) is presented in the carer questionnaire data tables in Appendix E.

198 hospitals returned staff questionnaires. Data from all questionnaires (14416) is presented in Appendix G. For some questionnaire items, the data for the two most positive answers have been combined, as well as being presented separately. This is provided both at a national level and for your hospital.

Appendix H: Staff suggestions for your hospital

The staff questionnaire included a question asking staff to make one suggestion on how their hospital could improve care and support provided to people with dementia. Below, all suggestions from staff at Queen Elizabeth Hospital, London are provided.

Registered Nurses (Band 5 or 6)

Better nurse/ patient ratio; more dementia training.

Easier access to food/ finger food 24/7 - not just at mealtimes.

Individual care is essential with good support from the healthcare provider. Responsibility of the nurse to handover thoroughly to next shift whether patient eaten enough or not or if you know what actual things the patient likes. Documentation is very important to improve patient' progress.

More staffing on ward with people living with dementia, as you do not need to rush when caring for people living with dementia. You really need to go at their own pace. They need people to walk with them when they are walking with purpose. Because there is not enough manpower on the ward where you have probably three-four people living with dementia, there is tendency for staff to ask a patient to sit down when they are walking with purpose because other staff are attending to other patients and told their patients are walking about.

Providing adequate information about dementia care and support and specialist nurses often available. For specials (one to one care) to be provided when needed.

Spending more time training staff. More staff is needed to provide better care to patients with dementia.

Staff should empathise. Learn and understand why they act, think and speak that way.

We need more staff on the ward - dementia needs are not met.

Registered Nurses (Band 7 or above)

By providing more one to one care and continuity of care. This will minimise changes for them.

Environment. Area safe and suitable for unrestricted walking.

More education.

Provision of dementia specialist nurse (with the right qualification), who must be visible and be able to monitor progress evaluation of all dementia patients from admission through to discharge.

Healthcare Assistants

More in depth training, on better ways to help dementia patients etc. when they are aggressive. We need more staff as dementia patients' needs are not met.

More snacks available between mealtimes would be good as patients with dementia often forget they've had a meal and so get hungry throughout the day.

More training and more support from the dementia team.

Support from NHS such [as] training.

To improve care and support for our patients, we need more staff. Having to care for six to eight patients with four [of those] patients having the condition (dementia), it's difficult in terms of giving them proper care and spending reasonable time with them.

Healthcare Assistants

Training that covers understanding of dementia and techniques to help. More one to one carers when they are needed.

We need more staff please because we do admit a high number of patients in our orthopaedic ward.

We need more support from specialists and more training.

Doctors

Dementia ward.

More nursing/ HCA staff so that it is safe for patients to get out of bed.

You cannot give adequate care to these vulnerable patients without adequate staffing levels - it is simply impossible, even if you have the best trained and educated staff with support from specialist dementia teams. Adequate staffing is a basic essential starting point!!!

Allied Healthcare Professionals

Develop dementia groups for patients and caregivers.

Students

No comments from students for your hospital.

Therapy Assistants & Allied Healthcare Professional Assistants

No comments from therapy assistants and allied healthcare professional assistants for your hospital.

Ward-based Administrators

Have additional nurses on the ward.

Patient info i.e. past jobs, hobbies, could be made more available as talking points.

The hospital could improve the care/ support by providing more staff (or volunteers) allowing them to spend more time talking to patients with dementia and perhaps take them outside to a garden for some fresh air. Also, many show signs of anxiety - by talking and sitting with patients with anxiety and providing/ teaching some coping techniques (if able to retain) would really help. Also, delayed discharges are not helpful and many medically fit patients can be in hospital for up to 4 months.

We recently had dementia awareness week which was useful as people need to understand that dementia patients are not responsible for their behaviour.

Other / Unknown

Less patient to nurse ratio in dementia ward.
