Many thanks to Hwyl for permission to use the cover artwork. Hwyl is an art project run by Dementia Matters in Powys (DMiP) and Arts Alive Wales based at the Brecon War Memorial Hospital. The project focuses on working with elderly patients on hospital wards, with their families, carers, the ward staff and artists on a weekly basis.

With thanks to Rhiannon Davies (DMiP) and Tessa Waite (Arts Alive Wales).

Introduction to the appendices

This is the appendices for your local report. Your local report is in a separate document. The appendices present data from Round 3 of the National Audit of Dementia, both at a national level and for your hospital. Data for your hospital in Round 2 is also shown where applicable. When comparing Round 2 data with Round 3 data, please be aware that differences in sample sizes and slight wording changes to some questions, can affect results in both rounds. Therefore, conclusions made from comparing the data should be with caution. Hospitals with less than five returns for the carer or staff questionnaires have not received any data and returns of 5 to 9 questionnaires have not received demographic information. The table below shows how the data tables in the appendices are laid out and what information you can find in each cell.

Std no. [Type]	Question number and text		National audit Round 3: % Num/Den	Your hospital Round 3: % Num/Den	Your hospital Round 2: % Num/Den
Standard reference and type. Standards document can be found on the audit website .	Question number. Orange items in the casenote audit appendix show low inter-rater reliability.	Question wording as in tool.	The national audit refers to all hospitals from England and Wales that participated in the Round 3 audit.	Data for your hospital from Round 3.	If the same question or a similar question was asked in Round 2, we have provided your Round 2 response for comparison. The carer and staff questionnaires are new tools and therefore this column has been excluded in these appendices.
			We have provided the percentage 'yes' response (unless otherwise indicated) and the numerator/denominator. The denominator will change throughout the appendices, depending on whether questions were routed (not asked in some instances), 'N/A' responses were chosen (these have been excluded from the analyses), or where staff and carers did not respond.		

For the organisational checklist, data from 199 hospitals are included in the national audit column (all the registered participants).

195 hospitals participated in the casenote audit, returning 10047 casenotes and this is shown in the national audit column. The national audit column for the casenote audit also shows the median and the inter quartile range for each question (where applicable). Question items which were found to have lower agreement in the inter-rater reliability analysis (see audit [website](#)) have been coloured orange.

196 hospitals returned carer questionnaires. Data from all questionnaires (4664) is presented in the carer questionnaire data tables in Appendix E.

198 hospitals returned staff questionnaires. Data from all questionnaires (14416) is presented in Appendix G. For some questionnaire items, the data for the two most positive answers have been combined, as well as being presented separately. This is provided both at a national level and for your hospital.

Appendix H: Staff suggestions for your hospital

The staff questionnaire included a question asking staff to make one suggestion on how their hospital could improve care and support provided to people with dementia. Below, all suggestions from staff at The Countess of Chester Hospital are provided.

Registered Nurses (Band 5 or 6)

Become more dementia friendly.

I feel that we need more space for patients. Putting confused patients next to each other doesn't work and they start to get worked up. We need funding for TV's it helps people with dementia orientate themselves to times and they enjoy soaps etc. We as a ward have raised money by doing various raffles and cake sales. However, it would cost over £20,000 for TVs and we can't raise that money. The TVs in the hospital cost £4 per day and patients cannot afford that.

Improve the environment, improve staff training, grow the dementia specialist service.

Increase staffing levels on wards to enable the staff to accommodate the individual needs and preferences of people with dementia.

Keeping staff on ward and not moving staff to other areas due to staffing shortages. 1:1 care not consistent, needs to be available at all times.

More dementia training days.

More staff members when we have a high number of dementia patients on the ward. Day room.

More staff to give quality time and care.

More volunteers to spend time with patients as ward-based staff don't always have time if there are acutely ill patients on the ward. Volunteers do use 'my life' software on the elderly care wards.

Staff need to be more aware, have better facilities to accommodate those with dementia. More staff.

Staff training modules, open visiting for dementia patients. Too institutional on ward. People do not like to sit all day long. Need more chair sensors, bed sensors, tabs alarms. Need a lounge/ café area - arts and crafts etc.

Would benefit from a 'lounge' area for patients as they often get fed up wandering around the ward - need some distractions. An outside area would also be great.

Registered Nurses (Band 7 or above)

More training, including practical advice for managing patients who are very confused or challenging.

The provision of side rooms/ quick areas for patients who do not have infection control issues.

Healthcare Assistants

1. Have a day room with a TV. 2. Large TVs in each bay. 3. Regular mandatory training (all staff). 4. I think relatives should be encouraged to help feed their own relatives at mealtimes. Also, help to fill menus in (as they know what their relatives likes and dislikes are).

Extra staff for 1:1 patients. Training.

More dementia friendly areas, I understand we have a lot of patients that aren't mobile, but for those who are, to be able to mobilise freely, as restricting them causes more distress.

Healthcare Assistants

More staffing.

More training.

Take the time to listen to the people looking after the patient on a day to day basis and not put them all under the same umbrella. Everyone is different and needs looking after differently. Not to be made to feel guilty when spending time talking to patients interacting with them. Patients with dementia sometimes find it difficult to eat a sandwich especially if its white bread on a white plate. Coloured plates would be useful, plus, a proper dining table and chairs where a group of them could sit and have a meal together, set the table properly.

Doctors

More manpower.

Provide joint care with psychiatrist for these patients.

The trust can improve by reinstating dementia nurse services in the front door in accident and emergency and medical assessment unit, in addition to support in the base ward.

Allied Healthcare Professionals

No comments from allied healthcare professionals for your hospital.

Students

Perhaps for students, workshops or training days.

Therapy Assistants & Allied Healthcare Professional Assistants

No comments from therapy assistants and allied healthcare professional assistants for your hospital.

Ward-based Administrators

More dementia specialist nurses and the ones we have spending time with patients rather than 'feathering their own nest and prancing about'. [name] would rather be in the local newspaper and hobnobbing with celebrities!

Other / Unknown

To make more time to interact and stimulate patients to improve agitation.
