Many thanks to Hwyl for permission to use the cover artwork. Hwyl is an art project run by Dementia Matters in Powys (DMiP) and Arts Alive Wales based at the Brecon War Memorial Hospital. The project focuses on working with elderly patients on hospital wards, with their families, carers, the ward staff and artists on a weekly basis.

With thanks to Rhiannon Davies (DMiP) and Tessa Waite (Arts Alive Wales).

## Introduction to the appendices

This is the appendices for your local report. Your local report is in a separate document. The appendices present data from Round 3 of the National Audit of Dementia, both at a national level and for your hospital. Data for your hospital in Round 2 is also shown where applicable. When comparing Round 2 data with Round 3 data, please be aware that differences in sample sizes and slight wording changes to some questions, can affect results in both rounds. Therefore, conclusions made from comparing the data should be with caution. Hospitals with less than five returns for the carer or staff questionnaires have not received any data and returns of 5 to 9 questionnaires have not received demographic information. The table below shows how the data tables in the appendices are laid out and what information you can find in each cell.

Std no. [Type]	Question number and text		National audit Round 3: % Num/Den	Your hospital Round 3: % Num/Den	Your hospital Round 2: % Num/Den
Standard reference and type. Standards document can be found on the <a href="#">audit website</a> .	Question number. Orange items in the casenote audit appendix show low inter-rater reliability.	Question wording as in tool.	The national audit refers to all hospitals from England and Wales that participated in the Round 3 audit.	Data for your hospital from Round 3.	If the same question or a similar question was asked in Round 2, we have provided your Round 2 response for comparison. The carer and staff questionnaires are new tools and therefore this column has been excluded in these appendices.
			We have provided the percentage 'yes' response (unless otherwise indicated) and the numerator/denominator. The denominator will change throughout the appendices, depending on whether questions were routed (not asked in some instances), 'N/A' responses were chosen (these have been excluded from the analyses), or where staff and carers did not respond.		

For the organisational checklist, data from 199 hospitals are included in the national audit column (all the registered participants).

195 hospitals participated in the casenote audit, returning 10047 casenotes and this is shown in the national audit column. The national audit column for the casenote audit also shows the median and the inter quartile range for each question (where applicable). Question items which were found to have lower agreement in the inter-rater reliability analysis (see audit [website](#)) have been coloured orange.

196 hospitals returned carer questionnaires. Data from all questionnaires (4664) is presented in the carer questionnaire data tables in Appendix E.

198 hospitals returned staff questionnaires. Data from all questionnaires (14416) is presented in Appendix G. For some questionnaire items, the data for the two most positive answers have been combined, as well as being presented separately. This is provided both at a national level and for your hospital.

## Appendix H: Staff suggestions for your hospital

The staff questionnaire included a question asking staff to make one suggestion on how their hospital could improve care and support provided to people with dementia. Below, all suggestions from staff at North Devon District Hospital are provided.

<b>Registered Nurses (Band 5 or 6)</b>
Consider protecting the staffing on the two general medical wards (where most of the dementia care takes place), rather than viewing them as an easy option for moving staff when other areas are short, but have a lower dependency. This would ensure staff have the time to sit with patients/ relatives/ carers and go through "This Is Me" documentation, to ensure all needs are met and any problems highlighted.
Hospital needs a dementia specialist nurse(s) to give support to staff, relatives and patients throughout their stay. Every hospital should increase specialist care.
Increase the availability of finger foods for dementia patients.
It would be great to have enough staff to be able to take a patient down to the coffee shop or walk outside to get some air.
More staff to be able to give one to one for those with dementia.
More staff, specifically at weekends - e.g. dementia specialists.
More staff. Not having to move dementia patients around the hospital unnecessarily. Not keeping patients in hospitals unnecessarily/ out of their known environment.
Not white sheets and blankets. Not white plates. Dementia patients cannot always see white things on white things. Open visiting hours. Need to have staff available to help encourage. Patients [are] moved around the hospital too much.
On occasion, more assistance could be available from the psychiatric team.
On the ward I work on, dementia patients are nursed alongside the young (16+), the very sick and those recovering from surgery - extra support staff/ dementia trained nurses could support us better. Nursing dementia patients in a surgical setting is often time consuming and distracting. The call bell system is very loud and wakes patients and disorients them. We need more time to assist with feeding. Hospital provides 'finger food' but it's often just sandwiches and crisps.
Patients with dementia become very confused and agitated when admitted to [illegible] due to the busy nature of the ward. Patients and staff constantly coming and little time to explain and reassure. Alternative route and entry for dementia patients.
Perhaps consider appointing a dual trained nurse (registered nurse and registered mental health nurse) as a clinical nurse specialist to offer advice.
Providing extra occupational therapy care to complete activities in the afternoons.
The acute wards could use tools to help improve dementia patients' time in the hospital i.e. not all of the wards use the "this is me" booklet. We could use pictures more with these patients to aid communication. Increase doctors' knowledge around dementia patients' behaviour. "This is me booklet" is for families/friends to fill in so we know more about what the individual likes/ doesn't like. Pictured menus, pictures of a toilet on toilet doors, foot prints for them to follow. Contrast in items i.e. different coloured top sheets on the beds so they aren't all white, different coloured bowls, cups etc. I believe wards could be more equipped with things to help dementia patients/ or make sure if these things are available staff know how to access them.

## Registered Nurses (Band 7 or above)

I have recently undertaken the virtual dementia bus tour. Whilst it was a traumatic experience for myself, it had a lasting impact and feel that this should definitely be made available to all staff who work on a dementia ward, if not to everyone in the healthcare profession.

Improving carer involvement and facilities.

More of a dedicated dementia outreach team.

More staff to cater for more time demanding needs of people with dementia.

Open visiting to be implemented across all wards.

Trained volunteers to complete activities with patients with dementia, these patients need time and patience and sometimes that it is difficult to manage alongside acute medical emergencies.

We are currently improving the facilities for patients and their carers in the dining room to allow for film clubs and a café setting/ environment with memory items.

We do not have a team specialising in this field which would help to drive this speciality forward. We also are not using volunteers yet and I think this would be useful for our teams to have support with nutrition and distraction.

## Healthcare Assistants

Give better instruction to relatives when they fill out "this is me" form. Most only put food likes and dislikes and nothing about life.

More staff to provide individualised, quicker discharge care to familiar care environment. Don't move patients to other wards as regular.

More volunteers to spend with [patients with] dementia.

Not move dementia/ confused patients around the hospital at all (day or night).

Quicker discharges. More use of community hospitals, respite, care homes. People with dementia are spending too long periods in hospital in emergency busy settings which are under staffed, most dementia patients are coming in medically fit on social admissions. Dementia should not be treated in emergency settings! It isn't fair on other patients, or the patient with dementia.

We have things for the dementia patients to do, i.e. books and games etc... but I think old songs being played and talking of the olden days, gets their brains working and so they will talk to you of their youth and memories... not this on main wards, just on the care for the elderly...

## Doctors

In a previous hospital, we have used blue wrist bands for patients with memory impairment to highlight staff to this information. This allows patients more freedom to walk around on wards and supports their care needs, whilst also always providing a prompt to staff to question someone if [they are] seen with a blue wristband on outside of the hospital ward - for patient safety.

## Allied Healthcare Professionals

Improved segregation/ separation of patients with dementia and those without, make care easier to deliver for dementia patients as the acute needs of the medical patients regularly outweigh the time available for full care to be delivered to the dementia patients. Our ward and philosophy of care try to ensure dementia patients have their needs met but due to staffing and acuity of patients, this level of desired care is not always achieved. This does affect staff morale who want to provide better care.

Treat patients holistically and provide good continuity of care.

## Students

## Therapy Assistants & Allied Healthcare Professional Assistants

*No comments from therapy assistants and allied healthcare professional assistants for your hospital.*

## Ward-based Administrators

Staff on wards that don't always deal with dementia, to have the appropriate training as they don't always know how to deal with their behaviour.

To ensure that all staff have dementia awareness training.
