Many thanks to Hwyl for permission to use the cover artwork. Hwyl is an art project run by Dementia Matters in Powys (DMiP) and Arts Alive Wales based at the Brecon War Memorial Hospital. The project focuses on working with elderly patients on hospital wards, with their families, carers, the ward staff and artists on a weekly basis.

With thanks to Rhiannon Davies (DMiP) and Tessa Waite (Arts Alive Wales).

## Introduction to the appendices

This is the appendices for your local report. Your local report is in a separate document. The appendices present data from Round 3 of the National Audit of Dementia, both at a national level and for your hospital. Data for your hospital in Round 2 is also shown where applicable. When comparing Round 2 data with Round 3 data, please be aware that differences in sample sizes and slight wording changes to some questions, can affect results in both rounds. Therefore, conclusions made from comparing the data should be with caution. Hospitals with less than five returns for the carer or staff questionnaires have not received any data and returns of 5 to 9 questionnaires have not received demographic information. The table below shows how the data tables in the appendices are laid out and what information you can find in each cell.

Std no. [Type]	Question number and text		National audit Round 3: % Num/Den	Your hospital Round 3: % Num/Den	Your hospital Round 2: % Num/Den
Standard reference and type. Standards document can be found on the <a href="#">audit website</a> .	Question number. Orange items in the casenote audit appendix show low inter-rater reliability.	Question wording as in tool.	The national audit refers to all hospitals from England and Wales that participated in the Round 3 audit.	Data for your hospital from Round 3.	If the same question or a similar question was asked in Round 2, we have provided your Round 2 response for comparison. The carer and staff questionnaires are new tools and therefore this column has been excluded in these appendices.
			We have provided the percentage 'yes' response (unless otherwise indicated) and the numerator/denominator. The denominator will change throughout the appendices, depending on whether questions were routed (not asked in some instances), 'N/A' responses were chosen (these have been excluded from the analyses), or where staff and carers did not respond.		

For the organisational checklist, data from 199 hospitals are included in the national audit column (all the registered participants).

195 hospitals participated in the casenote audit, returning 10047 casenotes and this is shown in the national audit column. The national audit column for the casenote audit also shows the median and the inter quartile range for each question (where applicable). Question items which were found to have lower agreement in the inter-rater reliability analysis (see audit [website](#)) have been coloured orange.

196 hospitals returned carer questionnaires. Data from all questionnaires (4664) is presented in the carer questionnaire data tables in Appendix E.

198 hospitals returned staff questionnaires. Data from all questionnaires (14416) is presented in Appendix G. For some questionnaire items, the data for the two most positive answers have been combined, as well as being presented separately. This is provided both at a national level and for your hospital.

## Appendix H: Staff suggestions for your hospital

The staff questionnaire included a question asking staff to make one suggestion on how their hospital could improve care and support provided to people with dementia. Below, all suggestions from staff at Kent & Canterbury Hospital are provided.

### Registered Nurses (Band 5 or 6)

By having adequate staff or extra staff.

I had dementia training in a previous hospital. The environment I now work in provides puzzles, games, picture cards etc. We have acute dementia patients with patients that don't have dementia - this can be very difficult at times. More family involvement. More staff! A lower ratio patient to staff with dementia.

I think it needs some more specialised people.

Improve discharge process so patients are not delayed for social purposes.

More training. More nursing staff with dementia training. Specialised bay/ unit.

Need more information on admission. Not all people with dementia have a "this is me" booklet completed and do not bring it to the hospital and if there are no relatives to ask about them, it becomes a difficult situation. Online access of "this is me" booklet would be easier, would improve the care for patients. The [Alzheimer's] society could create a website with "this is me" booklet [illegible] and accessed by healthcare professionals only.

We need more trained staff to support dementia patients. Also, need more time to spend with them; "WE NEED MORE STAFF".

### Registered Nurses (Band 7 or above)

Dementia nurses should be more readily available and help nurses on the ward more and visit regularly after initial assessment.

Physical layouts of wards, noise levels etc. cause increased sensory overload. In an ideal ward, smaller bays that aren't used as shortcuts to other areas on the ward would help.

### Healthcare Assistants

Dementia study day must be done or received by new staff.

More materials/ aids for illustrative purposes for patients admitted to the ward.

### Doctors

Improved communication with family members.

Improved teaching for junior doctors to diagnose and manage dementia. Flyers or flowchart for referral to memory clinics.

The overall care for people with dementia that I come into contact with is excellent.

Ward redesign along the lines of specialist dementia friendly wards.

## Allied Healthcare Professionals

Be given more time to deal with these patients.

eLearning and training on how to handle patients with dementia - particularly difficult or aggressive patients.

I feel doctors require more training around capacity training and best interest meetings.

I feel that there needs to be more staff on hand to deal with patients with dementia, especially on the fragility/ dementia care speciality ward. If there are patients with difficulty, who may become distressed or wander and therefore are a falls risk etc., may benefit from one-on-one nursing, and at present, there is not enough staff to be able to safely do this.

If they need help in managing their medication.

More activities available... orientation groups.

Offer more classroom-based workshops to staff to increase dementia awareness.

## Students

Applying effective communication with dementia patients to ensure they won't feel left out and neglected. Treating them as an individual.

## Therapy Assistants & Allied Healthcare Professional Assistants

Communication within the multidisciplinary team.

## Ward-based Administrators

By providing more staff on wards where there are more inpatients with dementia (staff to patient ratio is poor).

To have more facilities available.
