Many thanks to Hwyl for permission to use the cover artwork. Hwyl is an art project run by Dementia Matters in Powys (DMiP) and Arts Alive Wales based at the Brecon War Memorial Hospital. The project focuses on working with elderly patients on hospital wards, with their families, carers, the ward staff and artists on a weekly basis.

With thanks to Rhiannon Davies (DMiP) and Tessa Waite (Arts Alive Wales).

Introduction to the appendices

This is the appendices for your local report. Your local report is in a separate document. The appendices present data from Round 3 of the National Audit of Dementia, both at a national level and for your hospital. Data for your hospital in Round 2 is also shown where applicable. When comparing Round 2 data with Round 3 data, please be aware that differences in sample sizes and slight wording changes to some questions, can affect results in both rounds. Therefore, conclusions made from comparing the data should be with caution. Hospitals with less than five returns for the carer or staff questionnaires have not received any data and returns of 5 to 9 questionnaires have not received demographic information. The table below shows how the data tables in the appendices are laid out and what information you can find in each cell.

Std no. [Type]	Question number and text		National audit Round 3: % Num/Den	Your hospital Round 3: % Num/Den	Your hospital Round 2: % Num/Den
Standard reference and type. Standards document can be found on the audit website .	Question number. Orange items in the casenote audit appendix show low inter-rater reliability.	Question wording as in tool.	The national audit refers to all hospitals from England and Wales that participated in the Round 3 audit.	Data for your hospital from Round 3.	If the same question or a similar question was asked in Round 2, we have provided your Round 2 response for comparison. The carer and staff questionnaires are new tools and therefore this column has been excluded in these appendices.
			We have provided the percentage 'yes' response (unless otherwise indicated) and the numerator/denominator. The denominator will change throughout the appendices, depending on whether questions were routed (not asked in some instances), 'N/A' responses were chosen (these have been excluded from the analyses), or where staff and carers did not respond.		

For the organisational checklist, data from 199 hospitals are included in the national audit column (all the registered participants).

195 hospitals participated in the casenote audit, returning 10047 casenotes and this is shown in the national audit column. The national audit column for the casenote audit also shows the median and the inter quartile range for each question (where applicable). Question items which were found to have lower agreement in the inter-rater reliability analysis (see audit [website](#)) have been coloured orange.

196 hospitals returned carer questionnaires. Data from all questionnaires (4664) is presented in the carer questionnaire data tables in Appendix E.

198 hospitals returned staff questionnaires. Data from all questionnaires (14416) is presented in Appendix G. For some questionnaire items, the data for the two most positive answers have been combined, as well as being presented separately. This is provided both at a national level and for your hospital.

Appendix H: Staff suggestions for your hospital

The staff questionnaire included a question asking staff to make one suggestion on how their hospital could improve care and support provided to people with dementia. Below, all suggestions from staff at Grantham & District Hospital are provided.

Registered Nurses (Band 5 or 6)
"About me" booklets. "Cohort" bays allowing wandering. I work on ambulatory and assessment unit - not designed to accommodate [people with dementia].
Better staffing levels – nurse to patient ratio would help to support and improve care for dementia patients when assessments are completed and 1:1 care is needed, it isn't always honoured. Aggression is a major issue and these points need to be addressed and I am convinced patients wouldn't get to the aggressive stage, if the help and support was there in the first place.
Better support and training.
May need to give more training to the staff.
More awareness of dementia patients identifying key relations of what dementia patients need.
More staff so we have time to spend with the dementia patients and give them the support they need.
Nursed on appropriate ward - not transferred to acute orthopaedic/ surgical ward as medically fit outliers - pace is too busy to accommodate their needs.
People with dementia should have time taken to speak and interact with them, allowing them to walk around, and we are encouraged as staff to do this. [However,] staffing levels are not always increased to allow this, and current establishment does not allow at all for this.
Provide dementia training for all healthcare professionals. Need increase in specialist services, only have mental health liaison team during office hours. Need to improve on gaining personal information; if not available cannot use. [Due to staff resources, I cannot always] spend a lot of time and [interact with patients with dementia].
Provide more training for all staff at all levels from HCA to registered nurses to doctors.
Provide staff training.
Staff training, equipment i.e. games, puzzles, things for diversional therapy.
We don't always have enough staff to ensure mobile dementia patients are able to move as much as possible. Also, there is no flexibility with mealtimes or the availability of having nibbles to snack on.
When a patient is confused and restless, we need a person to bay watch at all times, which at present we need to a 24 [bed] care of the elderly ward diary first.
With the national increase in dementia, I feel patients are at risk due to short staffing. Time spent with dementia patients, effects time spent with other patients. Requires safe environment (safer) if patients have had their capacity and deprivation of liberty safeguards completed and require 1:1 - and it has been [requested], it doesn't happen. 1:1 means one nurse to one patient, not one nurse to two or bay watch.

Registered Nurses (Band 7 or above)

Have undertaken as pilot ward for enhanced care project supported by NHS Improvement (90-day project). New risk assessment and involving family and carers in patient's care. Carer badges and "all about me book" to be used.

More dementia friendly side rooms. More distraction training. Dementia band 4's to help with 1:1. More training required on nutritional needs for dementia patients. Need to start leaving snacks provided and finger foods by the kitchen.

Healthcare Assistants

As patients with dementia are on a busy general ward, staff lack the time they need.

By getting more staff instead of filling in paperwork. This does not help with their care.

Extra members of staff, which would give us more time to support patients. At times, some patients require 1:1 and staff are not always available due to shortage.

More staff.

Need more snacks/ drinks to encourage patients to eat as they desire.

There was a dementia course started but not followed through due to staff moving wards. Maybe the hospital could focus on skills its staff have and utilise these.

We must use the dementia "all about me" booklets more which automatically explain and individualise the patient being admitted. Is there a dementia nurse in the hospital? If so, why not liaise with the wards so we can carry out specified nursing for those patients.

Doctors

"About me" booklets describing what patient likes and dislikes etc.

Dementia screen mandatory for every elderly patient.

Designated dementia bay/ area.

I provide a specialist support service to assess and support patients rather than being involved in day to day care and I struggle to find personal information. I would like to see "All about me" or similar easily available.

More information/ signposting re: memory clinic and services.

Allied Healthcare Professionals

Ensure patients are hydrated to avoid dehydration could improve.

Not to move bed/ wards as this disorients them. To have bright colours on walls or toilet doors so they can identify where the toilets are. To dress them in their own clothes.

Provide an activity coordinator to engage dementia patients.

Reduce the movement of patients between wards.

Specialist support for care of patients with dementia and prevention of multiple ward movements around the hospital.

Students

More one to one care. A member of staff or student to spend one to one time with the patient.

To encourage staff to spend more time to understand patients and to try and learn a little about their background e.g. their profession. As a student, I feel that I have more time to give dementia patients in comparison to qualified nurses/ doctors.

Therapy Assistants & Allied Healthcare Professional Assistants

To have dementia training added to the trust induction and update courses available to all staff levels.
