Many thanks to Hwyl for permission to use the cover artwork. Hwyl is an art project run by Dementia Matters in Powys (DMiP) and Arts Alive Wales based at the Brecon War Memorial Hospital. The project focuses on working with elderly patients on hospital wards, with their families, carers, the ward staff and artists on a weekly basis.

With thanks to Rhiannon Davies (DMiP) and Tessa Waite (Arts Alive Wales).

Introduction to the appendices

This is the appendices for your local report. Your local report is in a separate document. The appendices present data from Round 3 of the National Audit of Dementia, both at a national level and for your hospital. Data for your hospital in Round 2 is also shown where applicable. When comparing Round 2 data with Round 3 data, please be aware that differences in sample sizes and slight wording changes to some questions, can affect results in both rounds. Therefore, conclusions made from comparing the data should be with caution. Hospitals with less than five returns for the carer or staff questionnaires have not received any data and returns of 5 to 9 questionnaires have not received demographic information. The table below shows how the data tables in the appendices are laid out and what information you can find in each cell.

Std no. [Type]	Question number and text		National audit Round 3: % Num/Den	Your hospital Round 3: % Num/Den	Your hospital Round 2: % Num/Den
Standard reference and type. Standards document can be found on the audit website .	Question number. Orange items in the casenote audit appendix show low inter-rater reliability.	Question wording as in tool.	The national audit refers to all hospitals from England and Wales that participated in the Round 3 audit.	Data for your hospital from Round 3.	If the same question or a similar question was asked in Round 2, we have provided your Round 2 response for comparison. The carer and staff questionnaires are new tools and therefore this column has been excluded in these appendices.
			We have provided the percentage 'yes' response (unless otherwise indicated) and the numerator/denominator. The denominator will change throughout the appendices, depending on whether questions were routed (not asked in some instances), 'N/A' responses were chosen (these have been excluded from the analyses), or where staff and carers did not respond.		

For the organisational checklist, data from 199 hospitals are included in the national audit column (all the registered participants).

195 hospitals participated in the casenote audit, returning 10047 casenotes and this is shown in the national audit column. The national audit column for the casenote audit also shows the median and the inter quartile range for each question (where applicable). Question items which were found to have lower agreement in the inter-rater reliability analysis (see audit [website](#)) have been coloured orange.

196 hospitals returned carer questionnaires. Data from all questionnaires (4664) is presented in the carer questionnaire data tables in Appendix E.

198 hospitals returned staff questionnaires. Data from all questionnaires (14416) is presented in Appendix G. For some questionnaire items, the data for the two most positive answers have been combined, as well as being presented separately. This is provided both at a national level and for your hospital.

Appendix H: Staff suggestions for your hospital

The staff questionnaire included a question asking staff to make one suggestion on how their hospital could improve care and support provided to people with dementia. Below, all suggestions from staff at Worcestershire Royal Hospital are provided.

Registered Nurses (Band 5 or 6)

Easier access to specialist nurse. More study/ training days.

More dementia friendly wards.

Offering workshops for staff, more dementia training.

Patients are admitted with falls, urinary tract infections or lower respiratory tract infections. Some from own home or care homes. No information is available about how the patients' dementia is affecting them at home - what is normal for them. Long hospital stays occur very frequently as patient not safe to return to prior environment and it can take months before placement/ funding sorted out. Medically, they will be fit but mentally...

Perhaps they could bring finger foods in for patients with dementia.

Providing all staff, particularly those "hands on" at bedside, with relevant training in caring for dementia patients (and carers) in an acute hospital setting. Staff are keen to improve communication and care for this group of patients but lack resources and relevant practical help. This group of patients require time and individualised care in order to meet their needs and deliver a high standard of care. Dementia needs to be mandatory training.

Registered Nurses (Band 7 or above)

No comments from registered nurses (band 7 or above) for your hospital.

Healthcare Assistants

Dementia training.

Improve staff training, more individual information.

More 1:1 to be able to interact with patients.

This is to create hands-on care with provision of enough staff each shift because they need a very close care.

Training.

We need more training to deal with the aggressive side. We need more chaplaincy support.

Doctors

No comments from doctors for your hospital.

Allied Healthcare Professionals

No comments from allied healthcare professionals for your hospital.

Students

To gain a mental health nurse or someone with speciality in dementia that can give us knowledge and information that can better our care that we give to each individual.

Therapy Assistants & Allied Healthcare Professional Assistants

No comments from therapy assistants and allied healthcare professional assistants for your hospital.

Ward-based Administrators

To be on a ward that is not linked into another ward - this would let the patients walk around with support but let them feel they have some freedom.

Other / Unknown

No comments from other staff for your hospital.
