Care in General Hospitals 2016-2017**

Local report appendices for:

Royal Gwent Hospital

Aneurin Bevan University Health Board

July 2017

Commissioned by:

Many thanks to Hwyl for permission to use the cover artwork. Hwyl is an art project run by Dementia Matters in Powys (DMiP) and Arts Alive Wales based at the Brecon War Memorial Hospital. The project focuses on working with elderly patients on hospital wards, with their families, carers, the ward staff and artists on a weekly basis.

With thanks to Rhiannon Davies (DMiP) and Tessa Waite (Arts Alive Wales).

Introduction to the appendices

This is the appendices for your local report. Your local report is in a separate document. The appendices present data from Round 3 of the National Audit of Dementia, both at a national level and for your hospital. Data for your hospital in Round 2 is also shown where applicable. When comparing Round 2 data with Round 3 data, please be aware that differences in sample sizes and slight wording changes to some questions, can affect results in both rounds. Therefore, conclusions made from comparing the data should be with caution. Hospitals with less than five returns for the carer or staff questionnaires have not received any data and returns of 5 to 9 questionnaires have not received demographic information. The table below shows how the data tables in the appendices are laid out and what information you can find in each cell.

Std no. [Type]	Question number and text		National audit Round 3: % Num/Den	Your hospital Round 3: % Num/Den	Your hospital Round 2: % Num/Den
Standard reference and type. Standards document can be found on the audit website .	Question number. Orange items in the casenote audit appendix show low inter-rater reliability.	Question wording as in tool.	The national audit refers to all hospitals from England and Wales that participated in the Round 3 audit.	Data for your hospital from Round 3.	If the same question or a similar question was asked in Round 2, we have provided your Round 2 response for comparison. The carer and staff questionnaires are new tools and therefore this column has been excluded in these appendices.
			We have provided the percentage 'yes' response (unless otherwise indicated) and the numerator/denominator. The denominator will change throughout the appendices, depending on whether questions were routed (not asked in some instances), 'N/A' responses were chosen (these have been excluded from the analyses), or where staff and carers did not respond.		

For the organisational checklist, data from 199 hospitals are included in the national audit column (all the registered participants).

195 hospitals participated in the casenote audit, returning 10047 casenotes and this is shown in the national audit column. The national audit column for the casenote audit also shows the median and the inter quartile range for each question (where applicable). Question items which were found to have lower agreement in the inter-rater reliability analysis (see audit [website](#)) have been coloured orange.

196 hospitals returned carer questionnaires. Data from all questionnaires (4664) is presented in the carer questionnaire data tables in Appendix E.

198 hospitals returned staff questionnaires. Data from all questionnaires (14416) is presented in Appendix G. For some questionnaire items, the data for the two most positive answers have been combined, as well as being presented separately. This is provided both at a national level and for your hospital.

Appendix H: Staff suggestions for your hospital

The staff questionnaire included a question asking staff to make one suggestion on how their hospital could improve care and support provided to people with dementia. Below, all suggestions from staff at Royal Gwent Hospital are provided.

Registered Nurses (Band 5 or 6)
"This is me", daisy sign, food chart, malnutrition universal screening tool score - dietician referral accordingly, good communication.
By staff/ public becoming dementia friends, which raises awareness of dementia, turning understanding of dementia into action.
Dementia link nurse in each ward.
Extra hands at mealtimes to help with feeding.
Get information from family, "This is Me" will give a picture [of the person], daisy sign, food and fluid chart, proper hand over, frequent chat.
In the current nursing environment on general hospital wards, it can be very difficult to fully meet the needs of patients with dementia, whilst being stretched by low staffing levels and high patient to nurse ratios. As a result, these two things have a direct negative impact on both the physical and mental health of patients with dementia. - An observation of a staff nurse.
Medical staff do not take protected mealtimes seriously in most cases within critical care and this should not be the case.
More family involvement.
My trust, I feel they are very supportive of meeting the needs of patients with dementia. Sometimes, if there are a lot of patients with dementia at any one time, it can be difficult, but especially out of hours - there are staff available to help from a staff pool. This would be useful in day time hours.
Snacks between meals.
Things to occupy the patients that are interesting to them or their previous hobbies, drawing, knitting etc. Different coloured cups and cutlery.
Training every staff in dementia please.
Wards better suited to their needs, not acute wards once medically fit. Confused patients would better benefit from wards that are locked giving them more freedom to wander, without fear of them coming to harm from leaving the ward.
We could make sure that patients do not have to be sent to the recovery unit to be nursed when we are not given ward beds for the patients. Recovery is totally unsuitable for any of our patients, especially those with dementia.

Registered Nurses (Band 7 or above)
Activities for dementia patients.
Bed management need to stop moving patients with dementia from ward to ward, especially at night, as this confuses them and also upsets them.
Management need to stop moving patients with dementia from ward to ward unnecessarily, especially at night, as this causes the patient distress and anxiety.

Registered Nurses (Band 7 or above)

Not to transfer patients with dementia/ acute confusion over night, to ensure they are nursed within appropriate speciality with appropriate staffing levels.

Volunteer groups could be developed and utilised to sit with and keep dementia patients entertained or to assist with mealtimes. The "this is me" booklet isn't used as widely as it could be.

We should have an improved environment where patients can be stimulated and encouraged to be active. There should be TVs and radios available, staffing levels need to be re-addressed as our population of elderly is increasing and therefore patients care needs are becoming more challenging.

When patients with dementia require an advocate, it takes a long time to arrange, no one ever seems to be able to signpost us to the correct area, and it seems more complicated that the process should be.

Healthcare Assistants

Adding more training and compulsory understanding before any staff take over the care of a patient. Providing more variety of foods and snacks for patients with dementia. Ensuring enough staff to provide sufficient care to dementia patients, and support for other patients in same bed area as affected patient.

Better access to finger foods. Better staffing levels to assist with meals. Better choice of finger foods.

Coloured mugs and coloured doors which patients with dementia can see. And by using the daisy above the bed and the "this is me" form.

Giving staff a lot more training and additional staff to help care for patients with dementia.

I think as there is a "this is me" document, there should be one just for food likes and dislikes of patients, with different food option on there of what they would eat or wouldn't eat. I mean like a list of food that they give in the hospital and get ticked off what they don't like. Also, if fizzy drinks could be included on a food menu because I find a lot of patients with dementia like a can of diet coke once in a while especially, Fanta.

More staff so you could spend more time with each patient.

More training for staff and resources available. Extra staff to accommodate when a patient is increasingly confused or wanders. Reduce transfers of patients with dementia to our ward unless absolutely necessary - transfer to one of the quieter surgical wards.

Personally, I think when first joining up to the job and you go through your training, such as clinical skills etc., they could also set up a course on dementia to educate staff and train staff on the best ways to assist a dementia patient in different scenarios. This is from a healthcare support workers point of view.

Provide more staff with better training, especially by night when confusion can increase. [Review care needs] - patients with dementia often don't sleep and more staff are needed.

When a patient is admitted with dementia, to always supply a special with the patient. Due to the busyness of the ward, we cannot always have time to sit and walk. When a special is in place for someone with dementia, it is much better for them as they have someone with them 24/7 which reduces the risk of falls.

When we have patients with dementia, it can be quite hard within your job role because these patients can take a lot of your time if they wander, or climb out of bed or the patient is aggressive... and you're trying to look after the other patients on your bay. It can be easier if you have a special but this is not always the case.
