DEMENTIA

**National Audit of Dementia  
Care in General Hospitals 2016-2017**

**Local report appendices for:**

**Sandwell General Hospital**

**Sandwell and West Birmingham Hospitals NHS Trust**

**July 2017**

**Commissioned by:**

**HQIP**

Healthcare Quality  
Improvement Partnership

Many thanks to Hwyl for permission to use the cover artwork. Hwyl is an art project run by Dementia Matters in Powys (DMiP) and Arts Alive Wales based at the Brecon War Memorial Hospital. The project focuses on working with elderly patients on hospital wards, with their families, carers, the ward staff and artists on a weekly basis.

With thanks to Rhiannon Davies (DMiP) and Tessa Waite (Arts Alive Wales).

| Appendix H: Verbatim staff suggestions for your hospital, presented by job role ..... | 40 |

## Introduction to the appendices

This is the appendices for your local report. Your local report is in a separate document. The appendices present data from Round 3 of the National Audit of Dementia, both at a national level and for your hospital. Data for your hospital in Round 2 is also shown where applicable. When comparing Round 2 data with Round 3 data, please be aware that differences in sample sizes and slight wording changes to some questions, can affect results in both rounds. Therefore, conclusions made from comparing the data should be with caution. Hospitals with less than five returns for the carer or staff questionnaires have not received any data and returns of 5 to 9 questionnaires have not received demographic information. The table below shows how the data tables in the appendices are laid out and what information you can find in each cell.

| Std no.<br>[Type]   | Question number and text   |                              | National audit<br>Round 3:<br>%<br>Num/Den   | Your hospital<br>Round 3:<br>%<br>Num/Den | Your hospital Round 2:<br>%<br>Num/Den  |
|---|--|------------------------------|--|---|---|
| Standard reference and type. Standards document can be found on the <a href="#">audit website</a> . | Question number. Orange items in the casenote audit appendix show low inter-rater reliability. | Question wording as in tool. | The national audit refers to all hospitals from England and Wales that participated in the Round 3 audit.  | Data for your hospital from Round 3.      | If the same question or a similar question was asked in Round 2, we have provided your Round 2 response for comparison. The carer and staff questionnaires are new tools and therefore this column has been excluded in these appendices. |
|   |  |                              | We have provided the percentage 'yes' response (unless otherwise indicated) and the numerator/denominator. The denominator will change throughout the appendices, depending on whether questions were routed (not asked in some instances), 'N/A' responses were chosen (these have been excluded from the analyses), or where staff and carers did not respond. |   |   |

For the organisational checklist, data from 199 hospitals are included in the national audit column (all the registered participants).

195 hospitals participated in the casenote audit, returning 10047 casenotes and this is shown in the national audit column. The national audit column for the casenote audit also shows the median and the inter quartile range for each question (where applicable). Question items which were found to have lower agreement in the inter-rater reliability analysis (see audit [website](#)) have been coloured orange.

196 hospitals returned carer questionnaires. Data from all questionnaires (4664) is presented in the carer questionnaire data tables in Appendix E.

198 hospitals returned staff questionnaires. Data from all questionnaires (14416) is presented in Appendix G. For some questionnaire items, the data for the two most positive answers have been combined, as well as being presented separately. This is provided both at a national level and for your hospital.

## Appendix H: Staff suggestions for your hospital

The staff questionnaire included a question asking staff to make one suggestion on how their hospital could improve care and support provided to people with dementia. Below, all suggestions from staff at Sandwell General Hospital are provided.

### Registered Nurses (Band 5 or 6)

Additional training for dementia patients. Availability of resources. Additional staff available! Pre-booked only. No resource packs for dementia patients. No liaison service for dementia patients.

Employ more support staff qualified to support dementia patients and activity coordinators [as] previously or, teach volunteers to feel more confident assisting dementia patients, or, more volunteers to support care of patients without dementia, enabling ward staff to have more time for dementia patients care needs.

Encourage relatives to stay with their relative (the patient). This isn't suggested often and I don't feel relatives and patients are aware of this option. There should be plenty of information provided visible to visitors.

Ensure all staff are dementia friends.

Have had some good support from the mental health team where necessary for our service but there have also been times where it has been very difficult to access the mental health liaison. This could be because they are stretched, so more team members within the mental health team could be useful.

I appreciate that there is a cost implication but I do feel that the patients benefit from drinking using a cup and saucer/ mug rather than a plastic cup and cup holder.

In the process of appropriate coloured plates, cups etc. Meal picture flash cards. Introducing coloured dementia friendly cutlery. Need to implement food picture cards.

More staff ensure these patients are one to one. Sandwiches offered at lunchtime. Who says that is what they want. Need more choice.

More staff to be able to give the patients the time and attention they deserve.

Myself as a staff nurse on an assessment unit, I do not have the time to interact for long with patients with dementia. I feel assessment units at times are distressing to patients with dementia.

### Registered Nurses (Band 7 or above)

Consistent, focused care nurses, rather than agency.

Dementia coordinators visiting the wards.

Greater use of the "This is me" or "all about me" booklets. Finding out the biography of the patient.

Johns campaign. Relationships with carers. Better visiting facilities. Carers trained in reminiscence therapy. Staff trained in massage. Staff trained in enhanced communication skills. Staff trained in specific memory games and interactions. More equipment and dedicated staff that can be supernumerary to ward establishment but accountable to the ward managers.

## Healthcare Assistants

Cinema room or bus stop. Patients are often saying they need to catch the bus.

More staff to help with the one to one activities on the ward i.e. games such as cards, dominoes, maybe drawing and painting.

My observation on dementia patients is how you communicate with he/ she, so I feel that wards or units should have an area where things are displayed for them and they can choose what they like to do, so in that case they will be distracted for couple hours of the day.

The environment needs to be dementia friendly - i.e. bright coloured signs so patient know where to go, soothing music etc. Our wards need to be sign posted i.e. toilets - washing facilities, we also need more time when patients have dementia. We need more personal information about what the patients eats at home, likes and dislikes if they normally like condiments - salt, mustard, sugar, sweeteners.

We raise our own funds to make our dementia patients a better hospital stay.

When we have one to one focus care staff to interact with the patients, this works well. If we don't have focus care staff, that's when issues arise with safety.

## Doctors

Guaranteed staffing levels. Consistent environments on moving wards. Continuity of care. Continued frailty specialist cover. Combined community and hospital case notes. Too many patient moves/ transfers to accommodate single sex requirements and bed pressures, means these patients are put at risk. Quite difficult to get hold of families or collateral history to provide accurate appropriate management.

The dementia support team we had was excellent. Personal, appropriate stimulating human interaction is needed and acute care staff have not got time for this. Access for carers has increased and this helps but some patients have no one extra to help.

## Allied Healthcare Professionals

A mandatory programme that would at least establish a foundation and then staffing to support on the shop floor.

A separate room/ area on the wards where it shows pictures/ newspaper cuttings from years ago to maybe trigger patients' memories and for something that patients relate to, to maybe make them feel at ease in their environment and can interact with to help pass the time of day.

Mandatory training for all staff. More activity coordinators to support this patient group cross-site for improved engagement on ward. Full open visiting for families/ carers to aid patients who require additional support, such as orientation, or are agitated and require familiar faces. Potential to utilise patients' current carers to provide 1:1 specialising if patient requires, instead of unfamiliar agency staff.

Much better environments specialised to those that have dementia and consistent throughout the hospital i.e. colours/ lighting/ signage.

Need to adopt initiatives like "This is me" consistently.

Staff who rarely encounter people with dementia could be encouraged to spend some time, even if it is as little as 1/2 a day in a relevant environment/ ward. This would be in order to see how other members of staff who do routinely work with people with dementia cope efficiently - so that they would have more insight on how to treat these patients empathically, and with better understanding.

## **Students**

All dementia patients to have hospital passports brought in with them. This will help to provide person centred care for the patient.

## **Therapy Assistants & Allied Healthcare Professional Assistants**

By providing more activity coordinators or volunteers and by providing training to staff regarding dementia.

## **Ward-based Administrators**

*No comments from ward-based administrators for your hospital.*

## **Other / Unknown**

*No comments from other staff for your hospital.*
