Many thanks to Hwyl for permission to use the cover artwork. Hwyl is an art project run by Dementia Matters in Powys (DMiP) and Arts Alive Wales based at the Brecon War Memorial Hospital. The project focuses on working with elderly patients on hospital wards, with their families, carers, the ward staff and artists on a weekly basis.

With thanks to Rhiannon Davies (DMiP) and Tessa Waite (Arts Alive Wales).

## Introduction to the appendices

This is the appendices for your local report. Your local report is in a separate document. The appendices present data from Round 3 of the National Audit of Dementia, both at a national level and for your hospital. Data for your hospital in Round 2 is also shown where applicable. When comparing Round 2 data with Round 3 data, please be aware that differences in sample sizes and slight wording changes to some questions, can affect results in both rounds. Therefore, conclusions made from comparing the data should be with caution. Hospitals with less than five returns for the carer or staff questionnaires have not received any data and returns of 5 to 9 questionnaires have not received demographic information. The table below shows how the data tables in the appendices are laid out and what information you can find in each cell.

Std no. [Type]	Question number and text		National audit Round 3: % Num/Den	Your hospital Round 3: % Num/Den	Your hospital Round 2: % Num/Den
Standard reference and type. Standards document can be found on the <a href="#">audit website</a> .	Question number. Orange items in the casenote audit appendix show low inter-rater reliability.	Question wording as in tool.	The national audit refers to all hospitals from England and Wales that participated in the Round 3 audit.	Data for your hospital from Round 3.	If the same question or a similar question was asked in Round 2, we have provided your Round 2 response for comparison. The carer and staff questionnaires are new tools and therefore this column has been excluded in these appendices.
			We have provided the percentage 'yes' response (unless otherwise indicated) and the numerator/denominator. The denominator will change throughout the appendices, depending on whether questions were routed (not asked in some instances), 'N/A' responses were chosen (these have been excluded from the analyses), or where staff and carers did not respond.		

For the organisational checklist, data from 199 hospitals are included in the national audit column (all the registered participants).

195 hospitals participated in the casenote audit, returning 10047 casenotes and this is shown in the national audit column. The national audit column for the casenote audit also shows the median and the inter quartile range for each question (where applicable). Question items which were found to have lower agreement in the inter-rater reliability analysis (see audit [website](#)) have been coloured orange.

196 hospitals returned carer questionnaires. Data from all questionnaires (4664) is presented in the carer questionnaire data tables in Appendix E.

198 hospitals returned staff questionnaires. Data from all questionnaires (14416) is presented in Appendix G. For some questionnaire items, the data for the two most positive answers have been combined, as well as being presented separately. This is provided both at a national level and for your hospital.

## Appendix H: Staff suggestions for your hospital

The staff questionnaire included a question asking staff to make one suggestion on how their hospital could improve care and support provided to people with dementia. Below, all suggestions from staff at Salisbury District Hospital are provided.

<b>Registered Nurses (Band 5 or 6)</b>
By improving the environment to make it more dementia friendly. Having activities organised everyday while awaiting to go home because of social situations to keep them occupied and engaged during the day. Dedicated and named staff could help improve care for dementia patients.
By providing an adequate or extra staffing in every shifts.
Ensuring adequate staffing levels can be difficult.
Extra staffing to provide assistance and activities.
Have a special ward in place that we could adequately care [for] needs regularly.
I believe the care and support we give is gold standard, however, I do think it would be fabulous to have some kind of day room/ activities room which will help keep patients busy and happier, [preventing] anxiety and agitation. This will prevent times of having to call for security for further support when patients become aggressive or/ and abusive.
In the ideal world, a ward dedicated to dementia patients which was secure to allow patients the freedom to wander. I would like a proper dining table where patients could sit together and interact where able. Staff that are constant instead of agency nurses who are looking after them one day, and gone the next.
More activities to help stimulate, or items they can use i.e. colouring books. Depending on how advanced the dementia is.
More awareness of the subject of dementia. Maybe snacks could be brought up on the supper trolley for people that require food in the night.
More nursing staff on ward or a team of nursing staff allocated to go around the wards to specifically give more time to dementia patients, taking work load off ward staff and making sure these patients get the care they need.
More staff to be available to give the one to one care they need, enabling assistance with personal needs/ feeding etc.
More staff, I know there is a national problem, but we do not just need the bare minimum of government guidelines, we need more, so that us nurses can spend the time talking to our patients, explaining procedures and why things take so long. You'd probably save more in the long run on complaints. Proper out of hours eating facilities. A day unit to entertain, but also prevent agitation and aggression from other patients. Fish tanks for meditation or relaxation.
More training. Staff available to help feed patients at mealtimes as this is also when nurses are doing medications, and IV meds for the other patients so you sometimes feel you rush the patient.
Not moving them late at night.
People with dementia need more time and [illegible], the unit has to be staffed well and adequately. At present the staff to patient ratio is one nurse to 10 patients and one carer to five patients.
Pet therapy.

## Registered Nurses (Band 5 or 6)

Please stop moving people with dementia overnight. Do they have a voice? Someone with dementia should have a medicines review on arrival, I have very rarely seen this in the whole time that I have worked here. Engaging the family more - these are the people that know them the best - be honest and open with them i.e. tell them that their confused relative is being moved overnight. Ensure we know what kind of dementia the patient has; the care is different for different dementias - once again I very rarely hear anybody [say] as to which dementia they have.

Provide a dementia carer or link who can spend time talking or doing activities.

Providing mental stimulation as hospitals are boring for patients. Patients tend to sleep in the day so don't sleep at night.

The hospital could improve some training and give more knowledge about this common mental disease.

The moving of patients with dementia on wards whilst in hospital.

The wards are staffed to such a minimal level that it's not always possible to give people with dementia the appropriate level of care and supervision.

To provide additional staff to clinical areas that are not staffed to care for, and meet the needs of, patients with dementia.

Trying to minimise transfer of patients with dementia to other wards.

## Registered Nurses (Band 7 or above)

Getting John's campaign fully running. Need better out of hours support. Courses for specialising - what to do/ how to do it. Resources for specialists to use to interact.

I think patients with dementia who are using support services such as x-ray should be given booked time slots so that family members can make sure they are available (if they wish) to accompany them, so they feel more secure.

More dementia training.

Not to limit visiting times for relatives.

Patients should not be moved after 8pm at night. Transport should arrive for people with dementia in a shorter window of time... 4 hours is too much and sometimes they do not arrive at all. This is very distressing for our dementia patients.

Shared learning forums to hear how other areas deal with dementia patients, as not all areas are exposed to it a great deal.

Specialised environment. Sitting service.

## Healthcare Assistants

Dementia patients can be very anxious in hospital, having more people to spend time with them would be useful. It wouldn't have to be clinical staff, volunteers can be great as they can spend quality time with patients, without being called away.

Ensure that the "this is me" document is completed for all patients who have been diagnosed with dementia.

Get more staff.

## Healthcare Assistants

I think the hospital setting can be very distressing for patients with dementia. I think additional staff would improve the quality of care we provide and the amount of time we can spend with each individual patient which I think would ease anxiety.

I think we would be able to provide better care for those with dementia if we had more time to actually spend with the patients, rather than filling out paperwork! I speak for others here too! Anyone can fill out a few pieces of paperwork, doesn't prove its been done, spending that time with a patient, and taking our time with them, would be massively beneficial [and] more meaningful to patients and relatives. Volunteers would be helpful and very much appreciated, feeding patients would then be less rushed.

Make sure all patients have a "this is me" document.

Making sure an "all about me" book is filled in; a lot of them get missed. More staff on the wards. I feel I do not have enough time with the patients and I am always in a rush.

More staff to help meet the needs of dementia patients, especially when they are at high risk of falls as [they are] more likely to fall and acquire an injury.

More staff trained to look after dementia patients.

More staff.

More staffing. The place is under staffed. Need more staff to special patients, one each, rather than two dementia patients to one carer.

More volunteers to spend time and do activities with dementia patients.

Need more staff so we can have the time to care for patients, and more time to talk to them.

We would be better equipped if we had full staffing.

## Doctors

Avoid moving patients with dementia from ward to ward unnecessarily.

More activities on the ward for patients. More interaction with dementia nurses (not seen).

More one to one nursing/ more nurses.

## Allied Healthcare Professionals

A dementia team to spend time with dementia patients, advocating for them (i.e. when site wants to move a dementia patient to another ward), meeting and supporting family and providing activities for patient group.

Dementia specific team to visit and liaise with patient and families, and assist healthcare planning. Would also benefit from "this is me" for every patient.

Having dementia specialists who come around and spend time with the patients. Not moving dementia patients between wards as disorientates them.

Make the study morning/ afternoon mandatory for all clinical staff. We had a brief overview of dementia within our trust induction. I then chose to go on the optional full dementia study day to consolidate my knowledge. This is not a requirement for all clinical staff. I am a rotational member of staff, meaning I move between wards every 6 months. I have found accommodating the needs of patients with a dementia varies greatly dependent on the ward I have been working on. For example, on the neurological ward, individuals with dementia are well supported, however, on acute surgical wards, this is much more limited.

## Students

More patients with "this is me" forms before arriving on our ward. More promotion of "this is me" for patients, relatives and staff. Maybe "this is me" name badges for all staff. More activities on wards for patients to do.

## Therapy Assistants & Allied Healthcare Professional Assistants

Ensuring that all staff are trained appropriately to manage a dementia patient's needs on all wards.

Many are prevented from mobilising around bay/ ward as 'too much effort' for nurses or nurse assistants to look after them. This means they are confined to a bay/ room.

To have a different coloured wristband/ ID bracelet (blue or purple) to flag up to staff this patient might be confused. Would alert staff in areas off ward e.g. radiology, theatre.

## Ward-based Administrators

Our dementia champion lady is quite vague about things - would not ask for her advice really.
