Many thanks to Hwyl for permission to use the cover artwork. Hwyl is an art project run by Dementia Matters in Powys (DMiP) and Arts Alive Wales based at the Brecon War Memorial Hospital. The project focuses on working with elderly patients on hospital wards, with their families, carers, the ward staff and artists on a weekly basis.

With thanks to Rhiannon Davies (DMiP) and Tessa Waite (Arts Alive Wales).

## Introduction to the appendices

This is the appendices for your local report. Your local report is in a separate document. The appendices present data from Round 3 of the National Audit of Dementia, both at a national level and for your hospital. Data for your hospital in Round 2 is also shown where applicable. When comparing Round 2 data with Round 3 data, please be aware that differences in sample sizes and slight wording changes to some questions, can affect results in both rounds. Therefore, conclusions made from comparing the data should be with caution. Hospitals with less than five returns for the carer or staff questionnaires have not received any data and returns of 5 to 9 questionnaires have not received demographic information. The table below shows how the data tables in the appendices are laid out and what information you can find in each cell.

Std no. [Type]	Question number and text		National audit Round 3: % Num/Den	Your hospital Round 3: % Num/Den	Your hospital Round 2: % Num/Den
Standard reference and type. Standards document can be found on the <a href="#">audit website</a> .	Question number. Orange items in the casenote audit appendix show low inter-rater reliability.	Question wording as in tool.	The national audit refers to all hospitals from England and Wales that participated in the Round 3 audit.	Data for your hospital from Round 3.	If the same question or a similar question was asked in Round 2, we have provided your Round 2 response for comparison. The carer and staff questionnaires are new tools and therefore this column has been excluded in these appendices.
			We have provided the percentage 'yes' response (unless otherwise indicated) and the numerator/denominator. The denominator will change throughout the appendices, depending on whether questions were routed (not asked in some instances), 'N/A' responses were chosen (these have been excluded from the analyses), or where staff and carers did not respond.		

For the organisational checklist, data from 199 hospitals are included in the national audit column (all the registered participants).

195 hospitals participated in the casenote audit, returning 10047 casenotes and this is shown in the national audit column. The national audit column for the casenote audit also shows the median and the inter quartile range for each question (where applicable). Question items which were found to have lower agreement in the inter-rater reliability analysis (see audit [website](#)) have been coloured orange.

196 hospitals returned carer questionnaires. Data from all questionnaires (4664) is presented in the carer questionnaire data tables in Appendix E.

198 hospitals returned staff questionnaires. Data from all questionnaires (14416) is presented in Appendix G. For some questionnaire items, the data for the two most positive answers have been combined, as well as being presented separately. This is provided both at a national level and for your hospital.

## Appendix H: Staff suggestions for your hospital

The staff questionnaire included a question asking staff to make one suggestion on how their hospital could improve care and support provided to people with dementia. Below, all suggestions from staff at St Mary's Hospital, Isle of Wight are provided.

### Registered Nurses (Band 5 or 6)

According to how bad the dementia is, [for a risk assessment] to be given time to each individual. For medical assessment unit to be honest on handover about patients' dementia.

Allow relatives to visit 24/7 for orientation. Also, not move patients from ward to ward as this does not help with confusion.

Appropriate courses, which advise and support those who are new to dementia care.

Give adequate courses/ training to staff. Should not be transferred to different wards. Patients need coloured crockery and cutlery so patients can see them. Food should be more colourful to encourage eating.

Good dementia training and staffing level.

Higher staffing levels to improve the time spent per patient.

Increasing dementia awareness by offering more support to healthcare professionals and the patients entrusted within their care. Training days on dementia awareness etc.

Make the 'eye' dementia friendly.

More HCAs and more training for HCAs.

More quality time with patient.

Need more support workers who have specialist training in dementia.

On handover from the medical assessment unit, [we need] an honest and clear handover of patients' mental state, not just 'muddled'.

Patients who are very confused may benefit from one on one nursing care to ensure their safety, but this is sometimes impossible because most wards are short staffed.

There should be a specific ward to cater only patients with dementia. They should also be in an environment with a better nurse to patient ratio to cater all of their needs, not just the medical ones.

Training should be provided to all staff who are looking after dementia patients. Additional staff like 1 to 1 to severely advanced dementia. Support to the family and staff available at all times. Is there an additional institution where they can be admitted, and not on the acute surgical or medical ward because it is not safe for other patients.

### Registered Nurses (Band 7 or above)

Have a dedicated dementia team for acute care with a funded lead for dementia.

### Healthcare Assistants

By having better dementia training.

Courses, more staff.

Courses.

## Healthcare Assistants

Dementia courses available.

Making sure all patient with dementia have "this is me" leaflets filled in about them i.e. what they like, how they like their tea/ coffee etc.

Mark with a symbol above bed if patient has dementia, also provide information history books on dementia patients to help staff recognise what era the patient may be referring to.

More close supervision staff.

More outside training, dementia cafés. Could use coloured plates and cups. Make puree and daily meals more colourful.

Not to be moved from ward to ward too many times this makes matters worse and transfer to other wards during the night is frightening. I believe all dementia patients should be on food charts to allow specific people to observe and relatives to know.

Provide more colourful utensils.

To have an out of doors dementia support registered nurse or a specialist HCA/ health support worker, especially at weekends and night time - often, when dementia patients are more confused/ disorientated.

## Doctors

I think a better communication between different disciplines and clearer plans of action would be helpful.

## Allied Healthcare Professionals

I recently attended an in-house learning session at my hospital. It was only a couple of hours and was really helpful. it was aimed at all clinical staff and hearing their experiences and advice was valuable. I have encouraged my work colleagues to attend when staffing levels will allow.

More comprehensive, holistic handovers from carers/ family/ residential homes on patients' needs/ interests/ likes/ dislikes which may help direct therapy and make interactions more positive.

More trained staff/ volunteers to help look after the sometimes-complex needs of a patient with dementia.

## Students

Handling people with dementia requires patience and time. I do believe that helping someone who has time on their hands (like one to one/ close supervision) will help in managing those patients, thus additional trained staff (in handling dementia) will improve the care of the hospital.

More workshops and lessons/ teaching sessions on dementia.

Staffing sometimes makes it difficult to "allow" dementia patients the freedom to walk around ward. Without enough staff, they are encouraged to remain in chair for safety reasons.

## Therapy Assistants & Allied Healthcare Professional Assistants

More one-to-one care available to stop upsetting other patients and hindering nursing staff from doing their job.

## Ward-based Administrators

Better support from mental health team.

Give the patients an environment where they can access the outside, breath fresh air, instead of being incarcerated on a ward too small and three floors high. It is a human right surely. This ward was intended to be used for 6 months and it has already been several years now that these vulnerable people have been suffering. The old dementia Building "Shackleton" at Ryde was much better and suitable for the complex needs of dementia patients. It had a large garden and large rooms and it was peaceful, however, the Isle of Wight NHS Trust chose to move the dementia ward and have used the building as a clinic. I believe this was a very bad choice. At St Mary's the dementia ward is too small and prison like, they have no direct access to the outside. They have a designated garden 2 floors below the ward and this is supposed to be adequate. There are not enough staff to safely allow patients to go out and have fresh air. They have six beds on the ward, they only have 1 trained nurse on at a time and I think it is cruel, to say the least, to put people in this environment.

More staff as nurses and HCAs don't have the time they need.

## Other / Unknown

Relatives need to be able to visit the hospital at ANY time, not just visiting hours, this should apply to every ward, not just particular wards. I think the paramedics and team in A&E need to be more aware that the patient with dementia may be more frustrated and anxious if their carer or relative is not allowed with them on every step of their hospital journey. I think every hospital employee/ healthcare worker should be trained on how to approach dementia patients and how to adapt the way we care for them and also how to cope with their carers and families.

Courses.
