Many thanks to Hwyl for permission to use the cover artwork. Hwyl is an art project run by Dementia Matters in Powys (DMiP) and Arts Alive Wales based at the Brecon War Memorial Hospital. The project focuses on working with elderly patients on hospital wards, with their families, carers, the ward staff and artists on a weekly basis.

With thanks to Rhiannon Davies (DMiP) and Tessa Waite (Arts Alive Wales).

Introduction to the appendices

This is the appendices for your local report. Your local report is in a separate document. The appendices present data from Round 3 of the National Audit of Dementia, both at a national level and for your hospital. Data for your hospital in Round 2 is also shown where applicable. When comparing Round 2 data with Round 3 data, please be aware that differences in sample sizes and slight wording changes to some questions, can affect results in both rounds. Therefore, conclusions made from comparing the data should be with caution. Hospitals with less than five returns for the carer or staff questionnaires have not received any data and returns of 5 to 9 questionnaires have not received demographic information. The table below shows how the data tables in the appendices are laid out and what information you can find in each cell.

Std no. [Type]	Question number and text		National audit Round 3: % Num/Den	Your hospital Round 3: % Num/Den	Your hospital Round 2: % Num/Den
Standard reference and type. Standards document can be found on the audit website .	Question number. Orange items in the casenote audit appendix show low inter-rater reliability.	Question wording as in tool.	The national audit refers to all hospitals from England and Wales that participated in the Round 3 audit.	Data for your hospital from Round 3.	If the same question or a similar question was asked in Round 2, we have provided your Round 2 response for comparison. The carer and staff questionnaires are new tools and therefore this column has been excluded in these appendices.
			We have provided the percentage 'yes' response (unless otherwise indicated) and the numerator/denominator. The denominator will change throughout the appendices, depending on whether questions were routed (not asked in some instances), 'N/A' responses were chosen (these have been excluded from the analyses), or where staff and carers did not respond.		

For the organisational checklist, data from 199 hospitals are included in the national audit column (all the registered participants).

195 hospitals participated in the casenote audit, returning 10047 casenotes and this is shown in the national audit column. The national audit column for the casenote audit also shows the median and the inter quartile range for each question (where applicable). Question items which were found to have lower agreement in the inter-rater reliability analysis (see audit [website](#)) have been coloured orange.

196 hospitals returned carer questionnaires. Data from all questionnaires (4664) is presented in the carer questionnaire data tables in Appendix E.

198 hospitals returned staff questionnaires. Data from all questionnaires (14416) is presented in Appendix G. For some questionnaire items, the data for the two most positive answers have been combined, as well as being presented separately. This is provided both at a national level and for your hospital.

Appendix H: Staff suggestions for your hospital

The staff questionnaire included a question asking staff to make one suggestion on how their hospital could improve care and support provided to people with dementia. Below, all suggestions from staff at The Princess Royal Hospital, Shrewsbury are provided.

Registered Nurses (Band 5 or 6)

By providing more staff. The nursing staff do not always have enough time to spend with dementia patients i.e. allowing them to walk around or complete activities.

Correctly staffing the ward. We all need more training in and around dementia please.

Dementia awareness on statutory training.

Dementia link nurse on the ward.

More staff. Early diagnosis of dementia and informed relatives.

More time, training and staff on the ward would benefit people with dementia.

More training for staff.

More training.

Nurses in specialist unit will benefit them as staff will have better understanding. It could make a difference if finger food could be supplied for patients who decline to eat, or are reluctant.

Short training sessions up to action on dementia.

Specialist unit for dementia patients waiting to be discharged.

Stop night time moves of people with dementia - happens too frequently from clinical site management.
Poor planning with hospital beds from trust.

Registered Nurses (Band 7 or above)

Better access to lunch clubs on other wards, or support to manage our own lunch club.

Improve the use of snacks and finger foods in and out of regular hours. Increase the dementia service with more support workers.

More staff available.

Healthcare Assistants

A day room - we have a butterfly room but it is small so cannot get many people in there. We could do with more time with the patients, instead of rushing around.

Encouraging patients with dementia family to come in and help with their family member more, as well as us working with the patients.

Having more staff to spend with the dementia patients and keeping a log of what they've done in case they forget.

I think it would be good to know what patients were like before they came into hospital. Or make their surroundings more similar while they are here i.e. more of their own things from home.

I think the hospital should make it a mandatory thing for dementia patients to have a patient passport/background information on the patients so we can get a better understanding of their life/ life at home.

Healthcare Assistants

Make sure each bed in the hospital has a TV above it.

More staff would equal extra time to give to those who would really benefit from it.

More staff. More use of patient passport. Staff at the hospital do not always get the full "background" picture re: dementia patients prior to admission.

Need more staff.

We don't always have the time to sit and talk to patients, which is a shame.

With the growing needs of dementia patients, I feel that there should be an elderly mentally infirm ward at the hospital. Staffed by registered mental health nurses - so post operation, the patient should be moved to the mentioned ward to recover in a more suitable environment.

Doctors

Dementia specialist nurse who we can ask for advice.

If we could get dementia nurse full time [in the] hospital, then the patients care will improve.

Allied Healthcare Professionals

More consistent use of the butterfly scheme icon - sometimes forgotten. Every patient that is appropriate to sit out/ use bathroom facilities should be encouraged to do so, to increase orientation and functional normality.

More personal information. More background information about present normal presentation.

Time is a key factor for staff. People with dementia need time with individual staff.

Students

As a student adult nurse, I feel whilst training there should be more training on dementia. I am lucky I have done my training as an HCA on my bank shifts in a nursing home.

Dementia specific classes or groups - exercises to music once a week, as evidence suggests this improves cognitive function and physical health.

Ward-based Administrators

To have facilities and staff to provide a lunch club every day. To have activities for the patients to enjoy.

Other / Unknown

I feel a lot of the patients would benefit from more 1:1 care at parts of the day, as they are sat alone for a long time. Free TV all day or things to keep them occupied.
