Many thanks to Hwyl for permission to use the cover artwork. Hwyl is an art project run by Dementia Matters in Powys (DMiP) and Arts Alive Wales based at the Brecon War Memorial Hospital. The project focuses on working with elderly patients on hospital wards, with their families, carers, the ward staff and artists on a weekly basis.

With thanks to Rhiannon Davies (DMiP) and Tessa Waite (Arts Alive Wales).

## Introduction to the appendices

This is the appendices for your local report. Your local report is in a separate document. The appendices present data from Round 3 of the National Audit of Dementia, both at a national level and for your hospital. Data for your hospital in Round 2 is also shown where applicable. When comparing Round 2 data with Round 3 data, please be aware that differences in sample sizes and slight wording changes to some questions, can affect results in both rounds. Therefore, conclusions made from comparing the data should be with caution. Hospitals with less than five returns for the carer or staff questionnaires have not received any data and returns of 5 to 9 questionnaires have not received demographic information. The table below shows how the data tables in the appendices are laid out and what information you can find in each cell.

Std no. [Type]	Question number and text		National audit Round 3: % Num/Den	Your hospital Round 3: % Num/Den	Your hospital Round 2: % Num/Den
Standard reference and type. Standards document can be found on the <a href="#">audit website</a> .	Question number. Orange items in the casenote audit appendix show low inter-rater reliability.	Question wording as in tool.	The national audit refers to all hospitals from England and Wales that participated in the Round 3 audit.	Data for your hospital from Round 3.	If the same question or a similar question was asked in Round 2, we have provided your Round 2 response for comparison. The carer and staff questionnaires are new tools and therefore this column has been excluded in these appendices.
			We have provided the percentage 'yes' response (unless otherwise indicated) and the numerator/denominator. The denominator will change throughout the appendices, depending on whether questions were routed (not asked in some instances), 'N/A' responses were chosen (these have been excluded from the analyses), or where staff and carers did not respond.		

For the organisational checklist, data from 199 hospitals are included in the national audit column (all the registered participants).

195 hospitals participated in the casenote audit, returning 10047 casenotes and this is shown in the national audit column. The national audit column for the casenote audit also shows the median and the inter quartile range for each question (where applicable). Question items which were found to have lower agreement in the inter-rater reliability analysis (see audit [website](#)) have been coloured orange.

196 hospitals returned carer questionnaires. Data from all questionnaires (4664) is presented in the carer questionnaire data tables in Appendix E.

198 hospitals returned staff questionnaires. Data from all questionnaires (14416) is presented in Appendix G. For some questionnaire items, the data for the two most positive answers have been combined, as well as being presented separately. This is provided both at a national level and for your hospital.

## Appendix H: Staff suggestions for your hospital

The staff questionnaire included a question asking staff to make one suggestion on how their hospital could improve care and support provided to people with dementia. Below, all suggestions from staff at Basildon University Hospital are provided.

### Registered Nurses (Band 5 or 6)

By providing more staff.

If the hospital could provide better staffing levels, we could provide much more care.

Increase in staff numbers would help so that patient with dementia would be allocated more time.

More staff and volunteers.

More staff members. Patients are identified as high risk fallers, people with dementia need higher staff ratios. People at "risk" are identified and no more staff numbers given.

More support for highly aggressive patients.

More training- more study days. ELearning is not enough.

Provide more specials and one to one services to support patients and to tackle [staff] workload.

Provide more staff. Always short of staff, dementia ward not being supported in the view of not on the top priority list for safety staffing.

Staff with dementia training who are involved should be more helpful to nursing staff.

To give more training to staff. More books/ information leaflets to be distributed to staff to update their skills. Time given to attend training. If there was a training to start earlier so we can [illegible] our shift. Our ward most of them [illegible] elderly, with dementia mostly. We [illegible] assist them with their diet/ fluids but at times, the problem is staffing is not enough so I can't cope to go around one by one to assist them. Sometimes, it's frustrating but I can't do anything else. Not enough staff, hope they will take into consideration to add more staff to all elderly wards. Thanks.

### Registered Nurses (Band 7 or above)

As I have expressed before, elderly wards will need extra staffing as most patients will need [two members of staff for their care]. The fact that we're also an acute medical ward, the staff don't have that much time to interact with patients living with dementia. More staff needed to look after acutely ill, elderly patients and elderly patients living with dementia.

More education for John's campaign for patient carers, and that we support it on the wards.

More in depth training, specifically qualified nurses i.e. medications, aggression, self-defence.

### Healthcare Assistants

By providing sufficient staffing levels in caring for patients with dementia. If we had more staff, we would be able to provide patients with their individual needs. Although we are encouraged to do so, due to staffing levels we are not always able to.

Caring for four patients with dementia in one bay cannot be provided by just one HCA to an acceptable standard. Greater staff numbers needed.

Ensuring enough staff to give patients with dementia time to express their needs or concerns.

## Healthcare Assistants

Increase the level of staffing! Most days it is impossible to spend any quality time with patients.

Insufficient staff to give patients the time needed to deal with individual needs - training too broad does not address the issues. Insufficient training and staff to deal with aggressive confused patients. Ratio of dementia patients to staff is dangerous at times. Meals ordered in advance - need staff to be able to go get additional meals.

More staff needed as no time to spend with patients as sometimes can't even get round to make sure every patient is clean, comfortable and repositioned.

More staff, for example HCAs. Patients with dementia need more time for all needs e.g. washing, dressing, medication, feeding. Need more staff for patients that need help to feed.

More training to staff. More Staff. Trust can provide special dementia allowance to the staff.

On a dementia ward, we need more HCAs as it is us that care for the patients - extremely hard and demanding. Dementia patients are more likely to be incontinent and needing assistance, more than able patients. It's extremely stressful.

On wards that have a large number of patients with dementia, more staff are needed, and it would be nice if a dementia specialist, mental health, were on call 24 hours a day, seven days a week.

To be able to have someone permanently in the day room so some patients could enjoy it.

We need more staff to enable us to give the patients the care they deserve. One HCA in [name of bay] with four dementia patients, you cannot give the care they deserve.

## Doctors

Clear pathway for relevant [patients] with dementia in the community. Access to crisis team widely available.

## Allied Healthcare Professionals

Each patient with dementia should have a sheet with all of the key information on how the patient can be supported. For example, their preferred name, music they enjoy, likes and dislikes, food preferences.

Offer finger foods to those with dementia.

## Students

Training and awareness of dementia for staff is highly necessary.

## Therapy Assistants & Allied Healthcare Professional Assistants
