

**National Audit of Dementia  
Care in General Hospitals 2016-2017**

**Local report appendices for:**

**Rotherham General Hospital**

**The Rotherham NHS Foundation Trust**

**July 2017**

**Commissioned by:**

**HQIP**

Healthcare Quality  
Improvement Partnership

Many thanks to Hwyl for permission to use the cover artwork. Hwyl is an art project run by Dementia Matters in Powys (DMiP) and Arts Alive Wales based at the Brecon War Memorial Hospital. The project focuses on working with elderly patients on hospital wards, with their families, carers, the ward staff and artists on a weekly basis.

With thanks to Rhiannon Davies (DMiP) and Tessa Waite (Arts Alive Wales).

## Introduction to the appendices

This is the appendices for your local report. Your local report is in a separate document. The appendices present data from Round 3 of the National Audit of Dementia, both at a national level and for your hospital. Data for your hospital in Round 2 is also shown where applicable. When comparing Round 2 data with Round 3 data, please be aware that differences in sample sizes and slight wording changes to some questions, can affect results in both rounds. Therefore, conclusions made from comparing the data should be with caution. Hospitals with less than five returns for the carer or staff questionnaires have not received any data and returns of 5 to 9 questionnaires have not received demographic information. The table below shows how the data tables in the appendices are laid out and what information you can find in each cell.

| Std no.<br>[Type]   | Question number and text   |                              | National audit<br>Round 3:<br>%<br>Num/Den   | Your hospital<br>Round 3:<br>%<br>Num/Den | Your hospital Round 2:<br>%<br>Num/Den  |
|---|--|------------------------------|--|---|---|
| Standard reference and type. Standards document can be found on the <a href="#">audit website</a> . | Question number. Orange items in the casenote audit appendix show low inter-rater reliability. | Question wording as in tool. | The national audit refers to all hospitals from England and Wales that participated in the Round 3 audit.  | Data for your hospital from Round 3.      | If the same question or a similar question was asked in Round 2, we have provided your Round 2 response for comparison. The carer and staff questionnaires are new tools and therefore this column has been excluded in these appendices. |
|   |  |                              | We have provided the percentage 'yes' response (unless otherwise indicated) and the numerator/denominator. The denominator will change throughout the appendices, depending on whether questions were routed (not asked in some instances), 'N/A' responses were chosen (these have been excluded from the analyses), or where staff and carers did not respond. |   |   |

For the organisational checklist, data from 199 hospitals are included in the national audit column (all the registered participants).

195 hospitals participated in the casenote audit, returning 10047 casenotes and this is shown in the national audit column. The national audit column for the casenote audit also shows the median and the inter quartile range for each question (where applicable). Question items which were found to have lower agreement in the inter-rater reliability analysis (see audit [website](#)) have been coloured orange.

196 hospitals returned carer questionnaires. Data from all questionnaires (4664) is presented in the carer questionnaire data tables in Appendix E.

198 hospitals returned staff questionnaires. Data from all questionnaires (14416) is presented in Appendix G. For some questionnaire items, the data for the two most positive answers have been combined, as well as being presented separately. This is provided both at a national level and for your hospital.

|---------|----|--|
| 7.5 [3] | 28 | Hospitals were asked to provide figures on the number of staff trained in dementia awareness. Only 34 hospitals could provide this for at least one of the years specified. Therefore, there is no data on training figures. |
| N7b [3] | 29 | What is the total number of adult beds excluding maternity and mental health beds in your hospital at 31 March 2016? This information was to compare with question 28 so is therefore not included.                          |

## Appendix H: Staff suggestions for your hospital

The staff questionnaire included a question asking staff to make one suggestion on how their hospital could improve care and support provided to people with dementia. Below, all suggestions from staff at Rotherham General Hospital are provided.

### Registered Nurses (Band 5 or 6)

Employing more healthcare assistants and assigning them to people with dementia to accommodate their individual needs.

Inappropriate movement of patients i.e. going home the next day and they get moved to another ward.

Make more resources for patients and family.

More staff = more attention.

More staff at night with patients with dementia as most walk all night, hungry. Some patients can be violent and aggressive to staff.

More staff to allow the time to care properly.

More staff to cover patients' needs.

More staff to take pressure off nurses to enable more personalised care would be better.

More time to sit and talk to family who know the patient best and to create a log for others.

Need enough staff to have the time to give the extra support these patients need.

Not to transfer patients with dementia late at night. Additional staffing as needed.

Patients with dementia on busy hospital wards do not seem to have enough activities to keep them busy and their minds stimulated.

Ward not secure therefore patients are not able to walk around [due to] the risk of them leaving the ward/hospital.

We need the doors to the ward locking to keep our patients safe.

### Registered Nurses (Band 7 or above)

Care homes providing information when the patient is sent in e.g. "this is me" booklet information on the likes/ dislikes. Very few care homes provide. My role is as a matron for older people I am also a dementia champion. Out of hours, the hospital should have information for [illegible] of a champion who is on duty. Handover needs to focus on nutrition and multidisciplinary meetings too. Occupational therapists need to work more with nurses assessing patients for equipment e.g. different cups, spoons, plate guards.

I have a family member with dementia. She visits hospital often. It is not always obvious that she is not understanding the events around her. Staff need to take time to talk to her and assess her needs more thoroughly, such as feeding habits and likes, toileting, social needs (TV, radio which are not always present).

Improved 1:1 care for those experiencing behaviours that challenge.

More training. More time for meaningful activities.

To be aware of number of dementia patients on a ward and staff this accordingly. Dementia patents need more time and calmer environment.

To have a dedicated dietician for patients with dementia to assist staff with making the right choices and assisting patients to maintain their nutrition and hydration without causing stress to the individual.

## Healthcare Assistants

A nice sitting room, with a TV and some games for patient and family to engage. A nice sitting room would be nice for patient and family.

By having more available staff to look after the needs of these patients.

Doors locked to enable patients to walk round ward, but not all the wards.

Ensure all staff have relevant training at the level needed and all staff made aware of the dementia patients' needs.

Making sure families/ carers always fill in the "this is me" passports of the patients or that they are brought in from home/ care homes.

More staff on the wards to do 1 to 1.

More time to spend with patients in day room to do interactive activities.

Providing more people to become dementia champions in every ward.

Regular up to date training.

## Doctors

*No comments from doctors for your hospital.*

## Allied Healthcare Professionals

Avoid frequent moving of patients between different wards.

By not moving them from one ward to another, adding to any distress or disorientation they are already experiencing and we do this daily [currently].

Improve the information about those with dementia in community notes, such as system one, identifying their support groups and carers, so extra information can be passed to these people if required to give further support.

Increased number of nursing staff and assistants to aid people with dementia at mealtimes so they can eat their dinner hot.

More training to staff and awareness of dementia team and their role. More training would be beneficial and access to dementia nurse e.g. phone number, education on their role.

Promotion and awareness. Having the time to give the extra care and support that is needed.

## Students

Ensure all staff that are involved in a patient's care are aware of the patients likes/ dislikes and personal preferences. Rather than treating them as a pathology.

More dementia champions.

More time for those patients to talk to and have a conversation with.

## **Therapy Assistants & Allied Healthcare Professional Assistants**

*No comments from therapy assistants and allied healthcare professional assistants for your hospital.*

## **Ward-based Administrators**

I do a ward-based admin role and yet I have never been included in any formal training. As in my role I do come into contact with all patients, I feel I would benefit from this and of course the patients too.

## **Other / Unknown**

*No comments from other staff for your hospital.*
