

**National Audit of Dementia
Care in General Hospitals 2016-2017**

Local report appendices for:

West Middlesex University Hospital

Chelsea and Westminster Hospital NHS Foundation Trust

July 2017

Commissioned by:

Many thanks to Hwyl for permission to use the cover artwork. Hwyl is an art project run by Dementia Matters in Powys (DMiP) and Arts Alive Wales based at the Brecon War Memorial Hospital. The project focuses on working with elderly patients on hospital wards, with their families, carers, the ward staff and artists on a weekly basis.

With thanks to Rhiannon Davies (DMiP) and Tessa Waite (Arts Alive Wales).

Introduction to the appendices

This is the appendices for your local report. Your local report is in a separate document. The appendices present data from Round 3 of the National Audit of Dementia, both at a national level and for your hospital. Data for your hospital in Round 2 is also shown where applicable. When comparing Round 2 data with Round 3 data, please be aware that differences in sample sizes and slight wording changes to some questions, can affect results in both rounds. Therefore, conclusions made from comparing the data should be with caution. Hospitals with less than five returns for the carer or staff questionnaires have not received any data and returns of 5 to 9 questionnaires have not received demographic information. The table below shows how the data tables in the appendices are laid out and what information you can find in each cell.

Std no. [Type]	Question number and text		National audit Round 3: % Num/Den	Your hospital Round 3: % Num/Den	Your hospital Round 2: % Num/Den
Standard reference and type. Standards document can be found on the audit website .	Question number. Orange items in the casenote audit appendix show low inter-rater reliability.	Question wording as in tool.	The national audit refers to all hospitals from England and Wales that participated in the Round 3 audit.	Data for your hospital from Round 3.	If the same question or a similar question was asked in Round 2, we have provided your Round 2 response for comparison. The carer and staff questionnaires are new tools and therefore this column has been excluded in these appendices.
			We have provided the percentage 'yes' response (unless otherwise indicated) and the numerator/denominator. The denominator will change throughout the appendices, depending on whether questions were routed (not asked in some instances), 'N/A' responses were chosen (these have been excluded from the analyses), or where staff and carers did not respond.		

For the organisational checklist, data from 199 hospitals are included in the national audit column (all the registered participants).

195 hospitals participated in the casenote audit, returning 10047 casenotes and this is shown in the national audit column. The national audit column for the casenote audit also shows the median and the inter quartile range for each question (where applicable). Question items which were found to have lower agreement in the inter-rater reliability analysis (see audit [website](#)) have been coloured orange.

196 hospitals returned carer questionnaires. Data from all questionnaires (4664) is presented in the carer questionnaire data tables in Appendix E.

198 hospitals returned staff questionnaires. Data from all questionnaires (14416) is presented in Appendix G. For some questionnaire items, the data for the two most positive answers have been combined, as well as being presented separately. This is provided both at a national level and for your hospital.

Appendix H: Staff suggestions for your hospital

The staff questionnaire included a question asking staff to make one suggestion on how their hospital could improve care and support provided to people with dementia. Below, all suggestions from staff at West Middlesex University Hospital are provided.

Registered Nurses (Band 5 or 6)

A few years ago, I attended a short teaching session organised by the Alzheimer's Society that has changed the way I care for patients with dementia. I wish that our hospital could provide ongoing teaching, be more open about dementia, be more vocal and, most of all, provide additional staff when acuity of the ward changes. On our ward, we care for very unwell patients with complex needs requiring intense nursing intervention - patients with dementia need time and stability of care provided by staff that has adequate knowledge about the condition.

By having more nurses or carers to sit with them and talk or play games, look back at nostalgic cards/ events and look at family photos.

Carers/ family encouraged and given the option to spend time visiting out of normal visiting hours to assist with mealtimes and patients' wellbeing.

Continuing to provide study days is vital for all the staff who work with dementia patients - is essential if we are to provide excellent care for dementia patients. Try, where possible, to gain feedback from clients and relatives involved during the care of dementia patients, and how we can improve the service.

Doing active games that patients like.

Employing more staff, allowing at least one member of the family to stay overnight if they so wish, automatically appointing a one to one nurse. Again, if the visiting time was wavered then the willing family members could help with feeding their relatives.

Including more relatives.

It would help to have more staff available to attend to patients with dementia so their nutritional needs are met.

Need to increase staffing level ratio of patient to staff as dementia patients are needing a high level of care and supervision.

Provide more staff so we can spend more time with people with dementia.

Provide more staff.

To potentially have a separate sheet of documentation from nursing/ clinical notes, with their specific needs, likes, dislikes, abilities and any other relevant information needed for staff to care for them and understand them appropriately.

Registered Nurses (Band 7 or above)

Our ward would benefit from an activity area for patients with dementia - we currently have this in our care of the elderly ward but not in the medical wards. Staffing needs to be looked at as well.

Patient passports would be so useful, especially from nursing homes as these patients normally arrive alone and many don't have any family or friends to visit, therefore leaving the staff and patient without the basic needs or wants of the patient.

Require more support staff so that patients are given extra time with all their care needs.

Healthcare Assistants

Maybe if they have a separate ward and the specialist would be able to support both patient and staff as well.

More patients' information. "This is me" passport.

Up to date dementia training for all staff, so they can help with better patient care as most of my ward, patients are elderly with dementia (any stage). This can help staff to deal with these patients efficiently and accurately.

Doctors

If nursing time was less pressured. If staffing levels were increased on the geriatric wards, there would be more time to spend with individual patients. There needs to be more awareness in other specialities, e.g. surgery, oncology, acute medicine.

Allied Healthcare Professionals

More flexible mealtimes and flexible meal sizes. More snacks available for nurses to offer patients. More mealtime helpers.

Nutrition between meals and ensuring patients regularly have a drinks and snacks and during mealtimes that patients with red trays are fully supported for the whole time.

Students

No comments from students for your hospital.

Therapy Assistants & Allied Healthcare Professional Assistants

No comments from therapy assistants and allied healthcare professional assistants for your hospital.

Ward-based Administrators

Maybe a special set up team of either clinical or non-clinical staff, could do things like craft workshops looking at old family pictures, listen to music from their age with them or just going around trying to talk to them rather than leaving them in bed. This is not the nursing staff's fault, they are stretched to the max.
