Many thanks to Hwyl for permission to use the cover artwork. Hwyl is an art project run by Dementia Matters in Powys (DMiP) and Arts Alive Wales based at the Brecon War Memorial Hospital. The project focuses on working with elderly patients on hospital wards, with their families, carers, the ward staff and artists on a weekly basis.

With thanks to Rhiannon Davies (DMiP) and Tessa Waite (Arts Alive Wales).

Introduction to the appendices

This is the appendices for your local report. Your local report is in a separate document. The appendices present data from Round 3 of the National Audit of Dementia, both at a national level and for your hospital. Data for your hospital in Round 2 is also shown where applicable. When comparing Round 2 data with Round 3 data, please be aware that differences in sample sizes and slight wording changes to some questions, can affect results in both rounds. Therefore, conclusions made from comparing the data should be with caution. Hospitals with less than five returns for the carer or staff questionnaires have not received any data and returns of 5 to 9 questionnaires have not received demographic information. The table below shows how the data tables in the appendices are laid out and what information you can find in each cell.

Std no. [Type]	Question number and text		National audit Round 3: % Num/Den	Your hospital Round 3: % Num/Den	Your hospital Round 2: % Num/Den
Standard reference and type. Standards document can be found on the audit website .	Question number. Orange items in the casenote audit appendix show low inter-rater reliability.	Question wording as in tool.	The national audit refers to all hospitals from England and Wales that participated in the Round 3 audit.	Data for your hospital from Round 3.	If the same question or a similar question was asked in Round 2, we have provided your Round 2 response for comparison. The carer and staff questionnaires are new tools and therefore this column has been excluded in these appendices.
			We have provided the percentage 'yes' response (unless otherwise indicated) and the numerator/denominator. The denominator will change throughout the appendices, depending on whether questions were routed (not asked in some instances), 'N/A' responses were chosen (these have been excluded from the analyses), or where staff and carers did not respond.		

For the organisational checklist, data from 199 hospitals are included in the national audit column (all the registered participants).

195 hospitals participated in the casenote audit, returning 10047 casenotes and this is shown in the national audit column. The national audit column for the casenote audit also shows the median and the inter quartile range for each question (where applicable). Question items which were found to have lower agreement in the inter-rater reliability analysis (see audit [website](#)) have been coloured orange.

196 hospitals returned carer questionnaires. Data from all questionnaires (4664) is presented in the carer questionnaire data tables in Appendix E.

198 hospitals returned staff questionnaires. Data from all questionnaires (14416) is presented in Appendix G. For some questionnaire items, the data for the two most positive answers have been combined, as well as being presented separately. This is provided both at a national level and for your hospital.

Appendix H: Staff suggestions for your hospital

The staff questionnaire included a question asking staff to make one suggestion on how their hospital could improve care and support provided to people with dementia. Below, all suggestions from staff at Royal Sussex County Hospital are provided.

Registered Nurses (Band 5 or 6)

Environment changes. Activities available. Dementia staffing ratio to support needs. More choice. Access to a wider choice of food types, different times.

More integrated awareness with other multidisciplinary team members as I work in a specialist area and visit wards on a regular basis, and I need to know if the patient has capacity to consent to procedures.

More staff at times when the dementia wards are busy so that patients can get more individual care.

Patient/ staff ratio. Environment. Recognition of patient activity (dependency tool doesn't acknowledge cognitive decline and associated inputs).

Staffing levels. Social issues cannot be solved by hospital. A bigger ward.

To not move them during the night and make them more confused and agitated in an environment they are not familiar with.

Registered Nurses (Band 7 or above)

More dementia training sessions.

Healthcare Assistants

As own ward is dementia, own staff level is high but sometimes the authority take off staff from the ward, making things worse sometimes. I think we have to follow the ratio.

For A&E to have a form of dementia training to be able to give good assessment on arrival and porters as well, as they seem to enjoy pushing trolleys fast with dementia [patients on them].

Have enough members of staff on each shift to enable more interaction and activities for the patients. Make the whole hospital dementia friendly - staff and environment.

More activities, memory photos, games to stimulate the mind.

More HCAs to help care, feed, talk, walk, to meet individual needs instead of half-heartedly - then need to give attention fully to one and no one else gets assistance.

More training for other wards i.e. A&E and porters, some wards don't have a clue what to do with patients with dementia.

Often, it's lack of time to properly care for people with dementia that's the issue - I know what to do but I don't have time to do it, especially in places like A&E/ the acute medical unit (I work as a bank HCA). Sometimes patients with dementia are "specialled", sometimes the ward staff end up specialing a patient if necessary, effectively leaving the ward short staffed...

Staffing is a huge problem and the layout of the ward isn't ideal for people with dementia. Also, lots of noises from monitors and IV machines can't be helped but I feel doesn't help making people feel relaxed and comfortable in hospital.

Staffing.

Healthcare Assistants

Training would help. Staffing as well. Environment - with elderly with severe dementia environment is one of the factors. Our ward is not really a dementia ward [illegible]. Identifying their needs and probably a [hospital] ID would be great for start. [Transfer] of patients with dementia especially out of hours should be lesser etc. It triggers more confusion in the patients. More choices - I would prefer especially with dementia patients as they tend not to eat their main meals, although sandwiches and biscuits etc. are offered.

Wards should be more dementia friendly. Wards look bright/ cheerful colours, not enough activities too.

Doctors

No comments from doctors for your hospital.

Allied Healthcare Professionals

Encourage staff to allow patients to walk about/ get out of bed/ walk to the toilet. Encourage all staff to go on the three-day dementia training that is offered to all free of charge.

Finger food menu. Cooked breakfast. Nourishing drink rounds. Facilities to fortify foods - we have no diet kitchen. More helpers/ dietetic assistants at mealtimes. Training for staff. Better ratios of help at mealtimes on specific dementia wards, less so on other wards.

I have attempted to contact the dementia coordinator previously for assistance with my work and they have not responded to my emails. They should have a higher profile and perhaps a team, rather than a single person so that help can be requested when required. Have recently undertaken a project to make our service more accessible for [people with] dementia, had very little support and have found it hard to implement due to this.

Keep ward moves to a minimum for those with dementia, allowing for continuity of care and reducing disorientation.

Students

There is a hospital dementia lead without a team. When she is funded, money is taken unacceptably from the dementia unit.
