Many thanks to Hwyl for permission to use the cover artwork. Hwyl is an art project run by Dementia Matters in Powys (DMiP) and Arts Alive Wales based at the Brecon War Memorial Hospital. The project focuses on working with elderly patients on hospital wards, with their families, carers, the ward staff and artists on a weekly basis.

With thanks to Rhiannon Davies (DMiP) and Tessa Waite (Arts Alive Wales).

## Introduction to the appendices

This is the appendices for your local report. Your local report is in a separate document. The appendices present data from Round 3 of the National Audit of Dementia, both at a national level and for your hospital. Data for your hospital in Round 2 is also shown where applicable. When comparing Round 2 data with Round 3 data, please be aware that differences in sample sizes and slight wording changes to some questions, can affect results in both rounds. Therefore, conclusions made from comparing the data should be with caution. Hospitals with less than five returns for the carer or staff questionnaires have not received any data and returns of 5 to 9 questionnaires have not received demographic information. The table below shows how the data tables in the appendices are laid out and what information you can find in each cell.

Std no. [Type]	Question number and text		National audit Round 3: % Num/Den	Your hospital Round 3: % Num/Den	Your hospital Round 2: % Num/Den
Standard reference and type. Standards document can be found on the <a href="#">audit website</a> .	Question number. Orange items in the casenote audit appendix show low inter-rater reliability.	Question wording as in tool.	The national audit refers to all hospitals from England and Wales that participated in the Round 3 audit.	Data for your hospital from Round 3.	If the same question or a similar question was asked in Round 2, we have provided your Round 2 response for comparison. The carer and staff questionnaires are new tools and therefore this column has been excluded in these appendices.
			We have provided the percentage 'yes' response (unless otherwise indicated) and the numerator/denominator. The denominator will change throughout the appendices, depending on whether questions were routed (not asked in some instances), 'N/A' responses were chosen (these have been excluded from the analyses), or where staff and carers did not respond.		

For the organisational checklist, data from 199 hospitals are included in the national audit column (all the registered participants).

195 hospitals participated in the casenote audit, returning 10047 casenotes and this is shown in the national audit column. The national audit column for the casenote audit also shows the median and the inter quartile range for each question (where applicable). Question items which were found to have lower agreement in the inter-rater reliability analysis (see audit [website](#)) have been coloured orange.

196 hospitals returned carer questionnaires. Data from all questionnaires (4664) is presented in the carer questionnaire data tables in Appendix E.

198 hospitals returned staff questionnaires. Data from all questionnaires (14416) is presented in Appendix G. For some questionnaire items, the data for the two most positive answers have been combined, as well as being presented separately. This is provided both at a national level and for your hospital.

## Appendix H: Staff suggestions for your hospital

The staff questionnaire included a question asking staff to make one suggestion on how their hospital could improve care and support provided to people with dementia. Below, all suggestions from staff at William Harvey Hospital, Ashford are provided.

### Registered Nurses (Band 5 or 6)

Appropriate staffing levels.

As I have mentioned previously, I think if you have a patient with dementia who requires specialising, that member of staff should not be counted in overall numbers on the ward. Equally, if there are patients on the ward with dementia, it should be recognised and taken into account when considering staffing. This would hopefully increase patient safety and reduce the number of falls etc. I am also not aware of any out of hours dementia services? Perhaps if there is such a service, it could be advertised a bit more.

Encourage more dementia friends and volunteers.

It would be lovely to have a day room and more resources for our dementia patients to offer them a less scary environment and more stimulation. Also, as a ward with a high number of patients suffering from dementia, I feel we need a higher staff to patient ratio. This would reduce falls and allow us more time for individualised care. Providing better care in regards to all aspects of health and wellbeing. Would love to have more time to speak to patients and relatives.

Making sure that everyone is aware that the patient has dementia and that "this is me" documents are filled in in [illegible] by the patient's relatives or care worker. Encourage the carers/ relatives to come and visit at mealtimes so they can feed them, as patients generally are more at ease with someone they know.

Maybe organising more activities for patients with dementia like - tea party.

More staff to provide the care and time. Four beds to a bay. Day room/ sensor room to allow for distraction or quiet time. Blue lighting dimmers for the lights. [Adjustable]/ low beds for all dementia patients.

Provide a safe area i.e. key-coded doors so that patients when able, can wander freely.

Provide us with enough staff to be able to take the time to talk with and interact with dementia patients.

To have more full-time dementia nurses to support the wards and dementia patients, encouraging use of tools and implementing new ideas. Dementia friendly ward areas - day room on wards such as Cambridge L ward at William Harvey Hospital. Dementia friendly wards - wallpaper- colours etc.

### Registered Nurses (Band 7 or above)

By ensuring that each dementia patient has a one to one healthcare professional ratio 24/7 whilst an inpatient. Also, ensure that a GP medical summary and 'passport of care' for all dementia patients admitted to our hospitals is accessed to optimise their care and safe outcomes. Dementia individuals care would be improved on the wards if ward managers and nurses and the doctors communicated the individual's dementia needs better on ward rounds and in clinical notes documentation. Also, there can be confusion as to whether the patient has an actual dementia diagnosis. Clarification of diagnosis is lacking. I am unsure as to whether there are nominated dementia link staff on each ward/ clinical department, and of their names if there are. Is there a dementia link care worker directory for each of our hospital sites or a trust wide one?

Ideally, I'd like all "This is me" documents completed on admission to the ward, but staffing levels means it doesn't get done.

Increase staffing levels.

Increased specialist nurses.

## Registered Nurses (Band 7 or above)

Need to increase further estates work to make the environments more dementia friendly and compliant.

The buzzer system is loud, noisy and intrusive. It disturbs patients with dementia and can agitate them. We do not have enough distractions on the ward to accommodate dementia patients.

We are currently working on a safety checklist for handovers. I think it would be a good idea to add nutrition to this list. All our patients have paper food charts, whether they have dementia or not. It is not always easy to get extra help if we need it.

We really would just like TIME to sit with the patient so we can encourage them with food and drink and they are able to take as long as they need. Could we employ people to sit and do activities a couple of hours a day, would fit in with mums when children are at school. We have Headway attending ward once a week, they are happy to support these patients in their group, they love looking at books about the olden days which brings out lots of discussion when the patients join in. Need more people to have time to sit with patient to encourage diet.

## Healthcare Assistants

1. Correct number of staff - as time is needed to look after patients with dementia. 2. The right environment - hospital is not the correct environment, sometimes patients are with us for months. 3. Televisions, music, gardens. 4. Patients with dementia get bored and frustrated as they need stimulation. 5. Unfair also for others.

1. More training. 2. To increase people's general knowledge and understanding of dementia. Caring for dementia patients who behave aggressively physically and verbally, without training, is hard and difficult.

Activities for people who are in hospital for a long time. Possibly run by volunteers.

All the staff that work in dementia wards should have a training every 3-6 months. Find more volunteers to help feeding and talk with patients when staff don't have time.

Behaviour charts, "this is me" filled in even if it takes staff to ask visitors.

Have better training - activities for those with dementia as they either sit in the emergency department or chair all day, no TV, no activities. Patients do nothing.

More information about the different types of dementia. Some type of sign we could hang over the end of the bed so we know they have dementia. Maybe need a like and dislike chart.

More staff is needed where patients have dementia. This would allow us to spend time to understand and work with their individual needs. Would like more training on a regular basis.

More staff, maybe TV room or separate room for activities.

## Doctors

By educating, promoting, enforcing the provision of reliable clinical information from GPs. By making sure that healthcare professionals have enough time to interact in clinics with dementia patients (the short allocated time to see each patient is a frank impediment to address dementia patients' needs properly).

Improve environment for patients with dementia.

Lots of patients with dementia get stranded in hospital whilst awaiting placement. A more dementia friendly environment or activities coordinator would be really helpful on the frailty wards to aid managing behavioural issues. Trying to prevent escalation of their sometimes challenging behaviour, minimising falls risks/ injury to themselves etc. in the process.

More supporting staff e.g. health care assistants.

## Doctors

More time to interact with patients.

Provision of more clinical time for peri-operative geriatric care, especially orthogeriatrics.

Recognition and allocation of appropriate time and environment for clinicians to see this group of patients at all times.

Resource a sustainable multi-professional team to support the care of patients living with dementia.

## Allied Healthcare Professionals

Higher staffing levels on wards with high levels of dementia. Rooms set aside for activities. Staff to provide activities/ conversation that are employed just for this purpose.

Increased numbers in staffing levels. Increased dementia awareness. Extending hospitals at home role - dementia patients returned to home environment asap. More stimulation and comfort [illegible] (music, soft toys). Management plans in place with local care homes.

## Students

Increased use of tools such as dementia passports, "This is me" filled in by carers/ family would benefit so we know what services are needed and what to offer.

It could be beneficial for the hospital to organise dementia training for students on placement in the hospital.

## Therapy Assistants & Allied Healthcare Professional Assistants

*No comments from therapy assistants and allied healthcare professional assistants for your hospital.*

## Ward-based Administrators

Familiarise yourself with their likes/ dislikes - care staff... I am admin staff so do not deal directly with patients very often. It is nice to have a conversation with them if they are able to.

I would like to see staff spend more time with dementia patients, chatting to them, personal care, hair washing etc.

## Other / Unknown

Better food options available.

To have more staff on the ward, give us time to communicate to the patients.
