Many thanks to Hwyl for permission to use the cover artwork. Hwyl is an art project run by Dementia Matters in Powys (DMiP) and Arts Alive Wales based at the Brecon War Memorial Hospital. The project focuses on working with elderly patients on hospital wards, with their families, carers, the ward staff and artists on a weekly basis.

With thanks to Rhiannon Davies (DMiP) and Tessa Waite (Arts Alive Wales).

Introduction to the appendices

This is the appendices for your local report. Your local report is in a separate document. The appendices present data from Round 3 of the National Audit of Dementia, both at a national level and for your hospital. Data for your hospital in Round 2 is also shown where applicable. When comparing Round 2 data with Round 3 data, please be aware that differences in sample sizes and slight wording changes to some questions, can affect results in both rounds. Therefore, conclusions made from comparing the data should be with caution. Hospitals with less than five returns for the carer or staff questionnaires have not received any data and returns of 5 to 9 questionnaires have not received demographic information. The table below shows how the data tables in the appendices are laid out and what information you can find in each cell.

Std no. [Type]	Question number and text		National audit Round 3: % Num/Den	Your hospital Round 3: % Num/Den	Your hospital Round 2: % Num/Den
Standard reference and type. Standards document can be found on the audit website .	Question number. Orange items in the casenote audit appendix show low inter-rater reliability.	Question wording as in tool.	The national audit refers to all hospitals from England and Wales that participated in the Round 3 audit.	Data for your hospital from Round 3.	If the same question or a similar question was asked in Round 2, we have provided your Round 2 response for comparison. The carer and staff questionnaires are new tools and therefore this column has been excluded in these appendices.
			We have provided the percentage 'yes' response (unless otherwise indicated) and the numerator/denominator. The denominator will change throughout the appendices, depending on whether questions were routed (not asked in some instances), 'N/A' responses were chosen (these have been excluded from the analyses), or where staff and carers did not respond.		

For the organisational checklist, data from 199 hospitals are included in the national audit column (all the registered participants).

195 hospitals participated in the casenote audit, returning 10047 casenotes and this is shown in the national audit column. The national audit column for the casenote audit also shows the median and the inter quartile range for each question (where applicable). Question items which were found to have lower agreement in the inter-rater reliability analysis (see audit [website](#)) have been coloured orange.

196 hospitals returned carer questionnaires. Data from all questionnaires (4664) is presented in the carer questionnaire data tables in Appendix E.

198 hospitals returned staff questionnaires. Data from all questionnaires (14416) is presented in Appendix G. For some questionnaire items, the data for the two most positive answers have been combined, as well as being presented separately. This is provided both at a national level and for your hospital.

Appendix H: Staff suggestions for your hospital

The staff questionnaire included a question asking staff to make one suggestion on how their hospital could improve care and support provided to people with dementia. Below, all suggestions from staff at St Richard's Hospital, Chichester are provided.

Registered Nurses (Band 5 or 6)

Have training on [illegible] everybody and less working hours in a block.

Increased levels of staffing would enable us to provide more individualised care and would allow us extra time to spend with the patients. On some occasions, patients are unable to choose what foods they would like to eat due to their dementia. I feel that patients would benefit greatly if families gave further information to staff, and if there was more flexibility in food choices.

Less acute beds for patients demands - to meet high standards for all. We are very well supported in my area and feel proud to be able to support people with dementia and carers in a very difficult and challenging progressive decline. Every little helps - time is most valuable and precious. Increasingly people are becoming more able to understand the complexities and differences, however, training is VITAL to try and understand how to approach and manage someone who has a dementia. Continued learning is vital too.

More staff to support individuals with dementia and challenging behaviour.

Providing special one to one support to those patients who may be a high falls risk accompanied but anxiety, disorientation. It is very hard working 13 hour shifts with responsibility of 9 acute medical and surgical patients when three or four may have dementia, to give holistic personalised care.

Quiet areas are difficult to find at times, if the patient has become agitated or disorientated it might help.

Registered Nurses (Band 7 or above)

Areas that are less clinical looking. Better information on transfer from bed managers.

Provision of quiet spaces. More volunteers to sit with patients who don't have support of family.

Healthcare Assistants

Accrue more dementia volunteers - the staff I see now do a fantastic job and take the time when resources are unlimited. They give great support.

Due to fast pace of ward, can be difficult to give dementia patients the time they need e.g. food times, mornings, waking patients up, washing them, sundowning.

More activities on each ward. Not just dementia based wards.

More staff, more aids for communication and comfort or past times. Treating patients individually and giving them individual care for their specific needs. Having [illegible] in place to prevent falls e.g. sensory mats, mattresses. Respecting and identifying with a patient's religious beliefs, singing hymns and reading the bible out loud can help comfort them and bring familiarity into their lives. Also, not moving patients around too much and giving access to relatives or friends on a more flexible basis. I had a lady who was very difficult to care for. I found out she was a Christian so when I started to sing a hymn she knew, she joined in and had fun making her bed with me, and I was able to care for her in a much more personal way which made her feel safe and calm.

Healthcare Assistants

Staff dedicated to only one patient's wellbeing, no clinical responsibilities would mean they have more time to interact with dementia patients.

Doctors

By providing them with a quieter environment.

More staff. More time.

Staff training.

Allied Healthcare Professionals

More visually comfortable environment. More liberty tracker devices. White walls, ceiling, floors, bedding = 'snow blindness' and could potentially 'numb' senses, causing lethargy or distress.

More volunteer time to enable someone to visit with them if agitated/ unsettled.

There's a need for a dementia specialist consultant and allied healthcare professionals. Lack of consultant psychiatrist service and delays and restricted remit of older peoples mental health team needs to be reviewed and improved. Too often behavioural and mood disturbances are not managed well and put down to [illegible] medical infections. This area needs a considerable review.

Wellbeing activities on the ward linked to functional tasks.

Students

None. I feel patients are supported well.

Therapy Assistants & Allied Healthcare Professional Assistants

Highlighting the importance of everybody reading a patient's "Knowing Me" document. Using the 'table top' card of "Knowing Me" so that how patients like their drinks served is known.
