
Psychiatry ‘Silver Guide’

Guidance for Psychiatric Training in the UK

Version 1.0

August 2022

1. Introduction

Welcome to Psychiatry!

The Silver Guide has been developed from the Gold Guide (GG8), with relevance to Psychiatry. This guide helps explain the structures involved in training, with an overview of the psychiatry training pathway.

A number of key pieces of documentation define the objectives and skills of all psychiatrists in training including:

- [Gold Guide 8th Edition \(2020\)](#)
- [GMC Generic Professional Capabilities Framework](#)
- [GMC Good Medical Practice \(2019\)](#)
- [GMC Promoting Excellence: Standards for Medical Education & Training](#)
- [Core Values for Psychiatrists \(2017\)](#)

This guide provides an overview of the key curricula features, including the curricula framework and structure. Core and higher specialty/sub-specialty(endorsement) training pathways are outlined, including dual-training pairings. The guide aligns to the latest version of the Gold Guide (GG 8) and should be read in conjunction with the GMC's Generic Professional Capabilities (GPC) Framework, Good Medical Practice, and the College's Core Values for Psychiatrists.

An overview of our assessment system, including information on the MRCPsych Examination (undertaken in Core Psychiatry Training), and Workplace Based Assessments (WPBAs) is also provided. The guide provides advice to both trainees and trainers needing performance support to achieve the required Key Capabilities.

The achievement of all the Key Capabilities (in core and generic skills) is essential for all specialty and subspecialty (endorsement) training. Doctors in training in higher psychiatric specialties will build upon the capabilities that have been acquired in core psychiatry training throughout their training, and post completion of training.

The maintenance of all capabilities in Psychiatry will be necessary for relicensing and revalidation, linking closely to the details in Good Medical Practice and Core Values for Psychiatrists.

2. Undertaking a Specialty Training Programme

Once trainees have satisfactorily completed a Psychiatry training programme comprising either core then higher psychiatry training (CT1 – ST6) or run-through training (ST1 – ST6), the whole of which has been prospectively approved by the GMC, they will be eligible for a Certificate of Completion of Training (CCT). Award of a CCT will entitle them to apply for entry to the specialist register.

Entry to specialty training programmes and subsequent award of a CCT can only be achieved through competitive selection through the relevant core and/or specialty national selection process.

For information on alternative routes, please see our [routes to registration webpages](#).

2.1. Recruitment into training

The NHS and the UK health departments promote and implement equal opportunities policies. There is no place for unlawful discrimination on grounds of age, disability, gender reassignment, marriage and civil partnership, pregnancy and maternity, race, religion or belief, sex, or sexual orientation. Advertisements for training programmes will incorporate a clear statement on equal opportunities confirming the suitability of the programme for less than full-time (LTFT) training.

Appointment processes must conform to employment law as well as to best practice in selection and recruitment. Recruitment into Psychiatric Training is dealt with by HEE North West.

For further information on recruitment, please view the [Health Education North West guidance](#).

2.2. Training numbers (applicable to core and specialty trainees)

Following appointment to a specialty training programme, a Dean's Reference Number (DRN) or National Training Number (NTN) will be awarded. This includes trainees working in NHS and non-NHS employment.

Core trainees will be awarded a DRN. These training numbers are for administrative purposes and do not confer any entitlement to entry to further specialty training.

An NTN will only be awarded to doctors in specialty training programmes that (subject to satisfactory progress) have an end point of the award of a CCT or CESR(CP).

3. Routes to Registration

3.1. Certificate of Completion of Training (CCT)

Psychiatry trainees must successfully complete an indicative 3 years (WTE) Core Psychiatry Training programme before applying in open competition for a place in a higher training programme leading to a Certificate of Completion of Training (CCT) in one of the six Psychiatry specialties.

The six Psychiatry higher specialties are General (Adult) Psychiatry, Child and Adolescent Psychiatry, Forensic Psychiatry, Psychiatry of Learning (Intellectual Disability), Medical Psychotherapy and Old Age Psychiatry. In addition, there are three sub-specialties of General (Adult) Psychiatry; Substance-Misuse (Addiction)

Psychiatry; Liaison Psychiatry and Rehabilitation Psychiatry. Liaison Psychiatry is a sub-specialty of both General (Adult) Psychiatry and Old Age Psychiatry. An outline of the training pathway can be found in figure 2.

3.1.1. CCT Specialty Name Changes

We are in the process of changing the names of the following specialties and sub-specialties:

- General Psychiatry to be re-named “Adult Psychiatry”.
- Psychiatry of Learning Disability to be re-named “Psychiatry of Intellectual Disability”.
- Endorsement in Substance-Misuse Psychiatry to be renamed “Addiction Psychiatry”.

It is within the GMC’s remit to amend endorsement (sub-specialty) name changes; therefore Substance-Misuse Psychiatry will be renamed “Addiction Psychiatry” from implementation of the new curricula.

For parent specialties, the GMC are working with the Department of Health and Social Care, as amendments to CCT pathways require legislative changes. Trainees will therefore continue to receive CCTs in “General Psychiatry” and “Psychiatry of Learning Disability” until these changes have been made.

CONSULTATION DRAFT

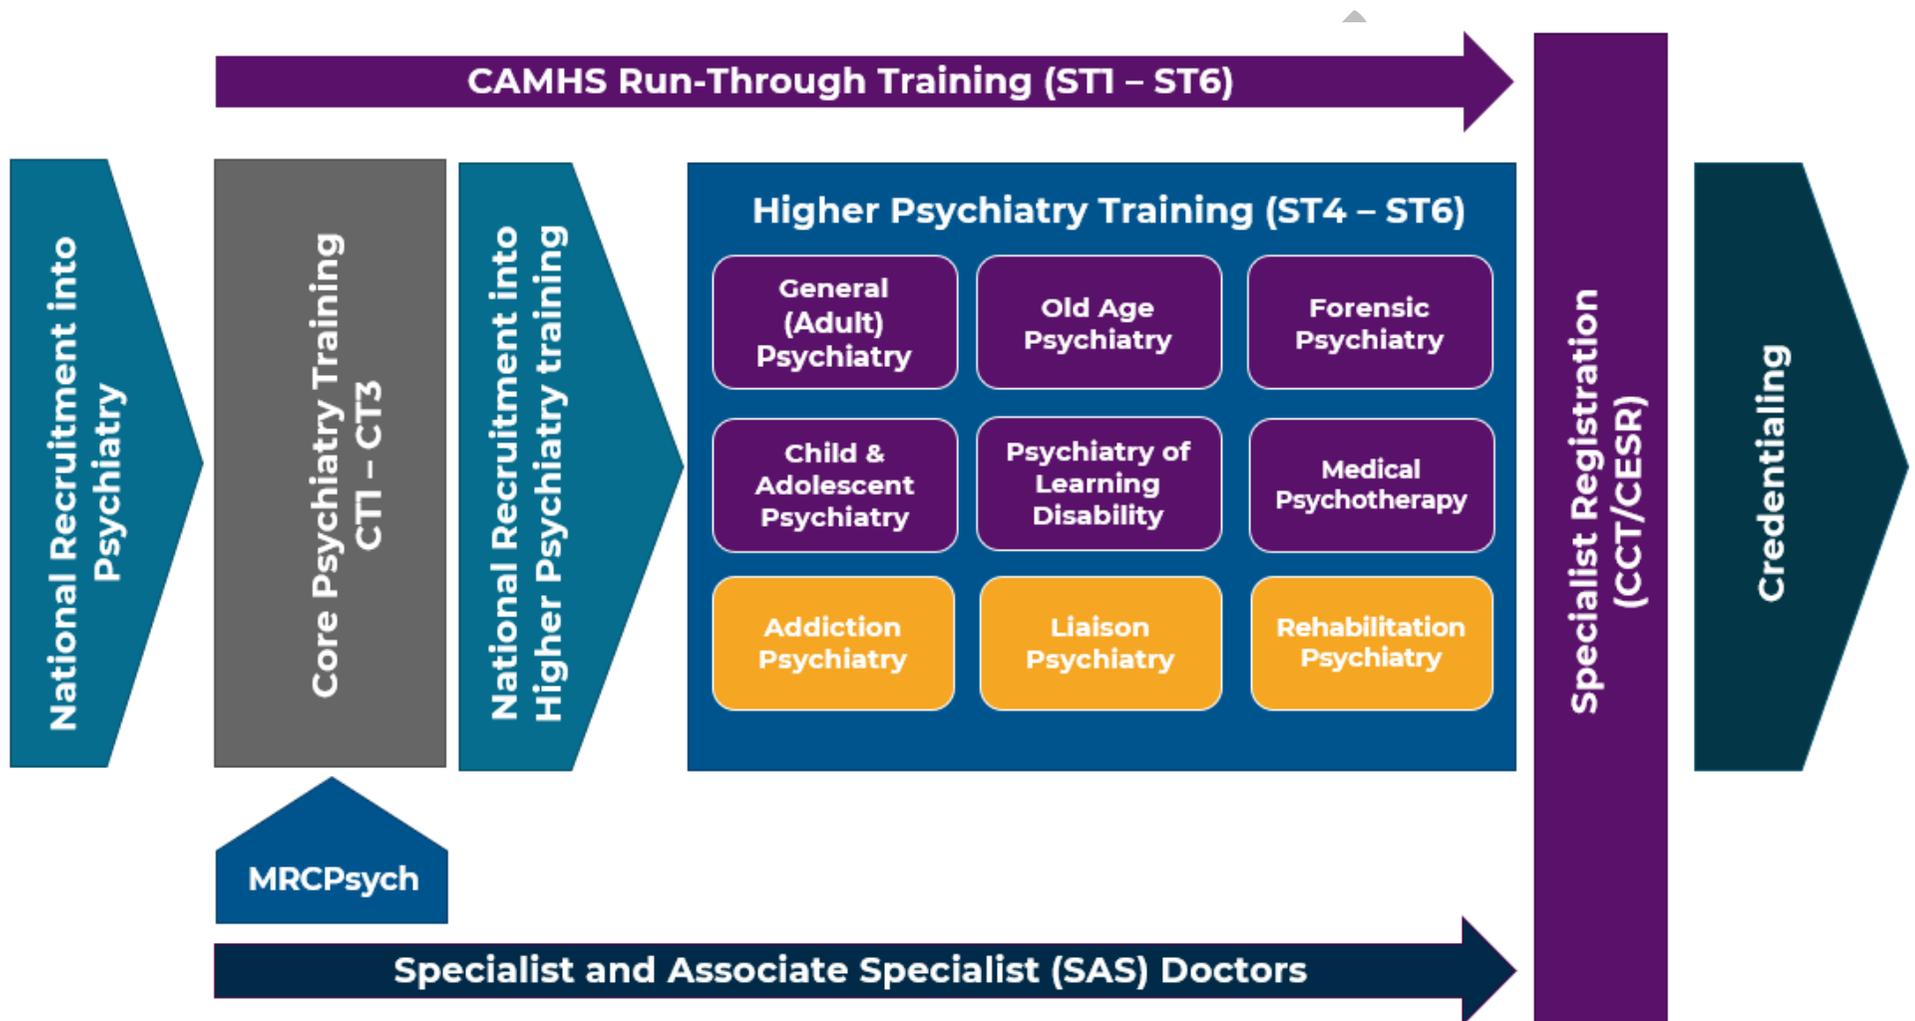

Figure 1. Psychiatry Training Pathway

3.2. Certificate of Eligibility for Specialist Registration (CESR)

3.2.1. What is CESR and what are the eligibility requirements?

CESR is the alternate certificate to CCT, it is the means of obtaining specialist registration in the UK without complete a full UK training programme. The applicant must satisfy the GMC that their previous or current specialist experience, inclusive of previous or alternate qualifications, meet the requirements of the relevant specialty curriculum.

CESR provides a route for doctors who have not completed an approved UK based training programme to obtain specialist registration. Doctors who have undertaken a minimum of 6 months training or obtained a specialist qualification and acquired specialist medical experience or knowledge as a psychiatrist within a non-training post from either inside or outside the UK and are currently practising, may apply to the GMC for assessment of their capabilities.

The process consists of providing evidence (both primary and secondary) to demonstrate each High-Level Outcome (HLO) on the relevant curriculum. Those who have obtained Membership of the Royal College of Psychiatrists (MRCPsych) are not required to demonstrate Core capabilities but those without are required to demonstrate both Core and Higher specialty capabilities. The evidence submitted should be from the applicant's recent practice and any evidence submitted that's over 6 years old will be discounted.

Applications for CESR are made through the GMC, who then allocate them to the College for review. Further information on the process and specialty specific guidance (SSGs) for each Psychiatric specialty can be found on the [GMC website](#).

4. Psychiatric Specialties

4.1. Core Psychiatry Training

The core training programme in Psychiatry is comprised of:

- Completion of an indicative 36 months (WTE) post-foundation in a core training programme approved by the GMC from CT1 to CT3 (or at a level above CT1 to CT3).
- During core training trainees must undertake the [MRCPsych Examination](#) which is comprised of:
 - Two (MCQ/EMI) written papers (Paper A & Paper B)
 - A Clinical Assessment of Skills and Capabilities (CASC).

Trainees must obtain a pass in all sections of the MRCPsych Examination and achieve all core capabilities in an approved training programme before they can be considered to have successfully completed/exited core training. An Annual Review of Capability Progression (ARCP) **outcome 6** will then be issued to trainees.

Trainees wishing to obtain a CCT in one of the six GMC approved Psychiatric specialties must complete an entire programme of training (core and higher). The

MRCPsych Examination must be achieved by CT3/ST3 prior to entry into ST4. Successful completion of training will be awarded with a final **ARCP outcome 6** and a recommendation to the GMC. Information for applying to CCT to the College [can be found on our training pages](#).

4.1.1. Psychotherapy requirements for core trainees

Trainees are expected to undertake a short and long case by the end of CT3 prior to progressing to ST4. Evidence is required via the PACE and SAPE assessments, with governing oversight by a Medical Psychotherapy tutor.

4.1.2. Addiction Psychiatry requirements for core trainees

To achieve the capabilities in Addiction Psychiatry, it is recommended that trainees undertake two WPBAs (CbD) with the oversight of an Addiction Psychiatry Tutor.

Example Core rotation:

- Recommended indicative 12 months in a General (Adult) Psychiatry post
- Recommended indicative 6 months in an Old Age Psychiatry post
- Recommended indicative 6 months in a Child & Adolescent/Learning Disability Psychiatry post
- Recommended indicative two 6-month posts from Forensic Psychiatry, Medical Psychotherapy/Developmental specialty not previously undertaken in a General (Adult) setting which would normally include Rehabilitation Psychiatry, Liaison Psychiatry, Addiction Psychiatry, Perinatal Psychiatry, work with Eating Disorders, and Neuropsychiatry

4.2. Higher Psychiatry Training

The Advanced Training Programme in Psychiatry is comprised of completion of a recommended indicative 36 months of higher specialty training in one of the six GMC approved psychiatric specialties listed below from levels ST4 to ST6:

- General (Adult) Psychiatry
- Child and Adolescent Psychiatry
- Forensic Psychiatry
- Psychiatry of Learning (Intellectual) Disability
- Medical Psychotherapy
- Old Age Psychiatry

Trainees must achieve the capabilities as set out in the appropriate advanced curriculum and achieve an **ARCP outcome 6** on completion of the training programme.

4.2.1. General (Adult) Psychiatry

The clinical experience in the Advanced Training Programme in Adult Psychiatry will consist of the equivalent of an indicative three years (WTE) and comprises: Two years in GMC approved General (Adult) Psychiatry posts.

An indicative 12 months (ST5 or 6) may be in a GMC approved endorsement of General (Adult) Psychiatry in either Substance-misuse (Addiction) Psychiatry,

Liaison Psychiatry, Rehabilitation Psychiatry, or non-endorsement posts such as Neuropsychiatry, Perinatal psychiatry, Eating Disorder etc. Trainee placements in the more specialised services or some experience of other specialities will be facilitated through discussions between trainees, supervisors and the TPD.

Successful completion of an indicative 12 months (WTE) in any of the above GMC approved sub-specialties will lead to an endorsement on the GMC Specialist Register. For trainees on formal academic training programmes, it is recognised that research time can contribute in part towards this time requirement for endorsement, if agreed with the supervisors and TPD, and provided that capabilities are acceptably met at ARCP.

Experience gained in General (Adult) Psychiatry must include properly supervised acute and community management. Increasingly, services and training in General (Adult) Psychiatry are delivered in functional teams that specialise in a single area of work such as:

- psychosis or non-psychosis pathways in the community,
- acute care as an inpatient, crisis, and home treatment teams,
- and specialised services such as early interventions, assertive outreach and recovery models.

Thus, in some areas not all posts will provide all experiences as detailed however over three years of training, trainee should gain clinical experience in assessing and treating adult patients presenting with a wide range of mental disorders, across acute and community settings. This will include both new and follow-up patients, and supervised experience of emergencies and out of hours duties and to help and ensure adequate overall clinical experience and that trainees are able to achieve the key curriculum requirements.

The recommended indicative three years spent in training will provide appropriate psychotherapeutic skills (Psychotherapy experience) and development of transferable skills and experience (e.g., advanced communication, leadership, emergency psychiatry and complex decision making), as well as specialised skills and experience in General (Adult) Psychiatry. This will also allow the development of research skills that are an integral part of training, such as critical evidence evaluation, knowledge of research frameworks, participation in research, and the use of objective clinical tools in clinical practice.

Each year trainees will participate in at least one project with a view to improve patient safety, health, and/or clinical outcomes. This may include NHS quality improvement procedures, management, leadership, audit, and/or involvement in ethically approved research.

Trainees may also take on management, research and/or leadership projects, as part of their placements as appropriate, as discussed and supported by their supervisors and TPDs. One post may meet different training needs in different training years depending on a trainee's progress.

Academic trainees will attend a specialist academic programme arranged within their training scheme. Attendance at relevant external conferences and study days is expected and will be supported through discussion between the trainee, the supervisors and the TPDs. Over three years, trainees will attend relevant specialist courses (including 'train the trainer' courses when relevant), actively contribute to academic activities, and to teaching students, junior doctors and other professionals.

4.2.2. Old Age Psychiatry

The clinical experience in the Advanced Training Programme in Old Age Psychiatry will consist of the equivalent of three years full time experience and will consist of:

- An indicative 24 months (WTE) within old age services,
- Within this indicative 24 months trainees should undertake the equivalent of at least an indicative 6 months (WTE) within inpatient settings. The inpatient experience must include managing detained patients under supervision.
- A further indicative twelve months (WTE) may be spent in old age services, liaison services (either Adult or Old Age, or a combination of both) or in another sub-specialty of psychiatry that should have relevance to the practice of Old Age Psychiatry, e.g., General (Adult) Psychiatry, Forensic Psychiatry, Medical Psychotherapy and Psychiatry of Learning (Intellectual Disability).
- Successful completion the capabilities within the Liaison Psychiatry curriculum will lead to an endorsement on the GMC Specialist Register.

Trainees may get experience working with older adults in the following settings:

- In-patient wards for older adults.
- Community mental health services.
- Memory services.
- Continuing care services.
- Joint psychiatric/geriatric services.
- Day hospital services.
- Sheltered and extra care sheltered settings.
- Residential and nursing care settings
- Home treatment/crisis resolution services specifically for older adults

4.2.3. Child & Adolescent Psychiatry

The clinical experience in the Advanced Training Programme in Child & Adolescent Psychiatry will consist of the equivalent of three years full time experience in approved placements in Child & Adolescent Psychiatry

The trainee will undertake placements of 1 year or 6 months as indicated under the recommended supervision of accredited supervisors in Child and Adolescent Psychiatry. It is recommended that trainees undertake one quality improvement activity at each stage of training.

The clinical experience will encompass seeing patients across the entire age range of 0-18 years and across the wide range of clinical presentations and mental

disorders in this age range. This will also include appropriate psychotherapy skills and psychotherapy experience. Academic trainees will have an academic block and an academic programme as part of the training programme with an academic supervisor; training will be in accordance with NIHR guidance.

The ST4 year will usually include broad-based experience in specialist community CAMHS teams. The ST5-ST6 years will cover more specialist experiences, including a recommended 6 months' WTE experience of Tier 4 CAMHS (specialist inpatient or day-patient services); experience of liaison/ working with different Paediatric services; and other specialist experiences for e.g., Forensic CAMHS, CAMHS-ID, substance misuse services, specialist Eating Disorder services (will depend on the training scheme. Trainees may also take on management experiences and leadership projects as part of their placements as appropriate, having discussed with their supervisors and TPDs. One post may meet different training needs in different training years depending on a trainee's progress. Trainee placements in the more specialised services will be through discussions between trainees, supervisors and the TPD.

Trainees' caseloads will vary based on the placement (e.g., a trainee placed in a Tier 4 service is likely to have a smaller caseload than when placed in a community 0-18 CAMHS team). It is important that caseloads reflect not only the wide range of clinical presentations and disorders in CAMHS, but also balanced with complexity of cases to ensure trainees achieve the key capabilities in the curriculum. Caseloads should also enable trainees to prepare for independent practice as consultants in Child & Adolescent Psychiatry, being able to manage diverse needs and priorities as highlighted in the curriculum. It is suggested that trainees on placement in a Community CAMHS team will carry a caseload of 20-30 cases (not exceeding 40 cases) of a mixed caseload (for a full-time trainee) through the placement. Typically, seeing and assessing 50-75 new cases every year for a full-time trainee (this suggested number will include urgent/ emergency work which would be 'one-off assessments', work on an out-of-hours on-call rota, and their placement caseload) will help the trainee ensure adequate overall clinical experience.

Trainees will get experience of emergency child & adolescent psychiatry, which will include 55 on-call shifts (including 'out-of-hours' work) and at least 50 cases in this context during the course of their training in CAP.

CAP ST trainees will attend a specialist academic programme arranged within their training scheme equivalent to a recommendation of 30 ½ day sessions/ year. Attendance at relevant external conferences and study days is expected and will be through discussion between the trainee, the supervisors and the TPDs.

CAP ST trainees must undertake at least a structured review of research literature in one aspect of CAP/child mental health that is of an academic standard to be potentially published, in order to meet the recommended capability in research and scholarship (HLO9). This will be undertaken under the supervision of a suitable academic supervisor. The educational and psychiatric supervisors, along with the TPDs will help trainees to ensure that this activity is achieved and reviewed as completed by the ARCP in ST5.

- CAP Run-Through Pilot Programme – Trainees who wish to pursue training in Child & Adolescent Psychiatry from the outset can apply to join the CAP run-through pilot programme. This pilot programme runs from ST1-ST6, with trainees undertaking compulsorily a 6 months' WTE post in CAP & a 6 months' WTE in a Paediatrics-linked post (Paediatric liaison, improving medical knowledge and skills) usually in ST2. Trainees will progress to ST4 higher training in CAP at the end of core training to enter higher training if they have successfully passed the MRCPsych examination and have achieved all the capabilities to complete core training. Trainees on this pathway still undertake core psychiatry training and will need to obtain the capabilities outlined in the core psychiatry curriculum and attend the core psychiatry academic programmes. From ST4-6, these trainees will follow the same training programme as other CAP ST4-6 trainees.
- *The intake for CAP Run-Through Pilot programme will extend from Aug 2018 – Aug 2021. After Aug 2021, trainees already on this pilot programme will continue as run-through trainees.*

4.2.4. Psychiatry of Learning (Intellectual) Disability

The clinical experience in the Higher Training Programme in Psychiatry of Learning (Intellectual) Disability will consist of the equivalent of three years full time training in approved training placements in Learning (Intellectual) Disability psychiatry. The trainee will work under the supervision of approved clinical supervisors in Learning (Intellectual) Disability Psychiatry.

The purpose of the training programme is to facilitate the development of the knowledge, skills and attitudes, as detailed in the specialty curriculum, that are required to work independently as a consultant psychiatrist in learning (intellectual) disability.

The trainee will spend a recommended two years of full-time training in specialist services for adults with learning (intellectual) disability. The final 12 months of training may encompass additional clinical experience to consolidate and develop specialist skills according to specific needs and interests of the trainee. There is the option of spending up to 12 months of training in specialist services for children and adolescents with intellectual disability. Other specialist placements could include:

- Forensic Learning (Intellectual) Disability Psychiatry.
- Neurodevelopmental disorders across the full IQ spectrum.
- General (Adult) Psychiatry including facilitating access to mainstream services for people with learning (intellectual) disability.
- Neuropsychiatry.

These placements would require approval by the training programme director (TPD).

Clinical experience during higher training in Psychiatry of Learning (Intellectual) Disability will include working within specialist multidisciplinary teams, leading to the development of specialist expertise in the assessment and management of the

range of mental and behaviour disorders prevalent in the population of adults with learning (intellectual) disability.

Trainees will gain experience of working in crisis situations and out of hours through participation in on call rotas - these rotas may be in mainstream psychiatric services or in specialist learning disability services. It is recommended that trainees complete an indicative 55 on call shifts over their time in training. If a trainee has limited opportunity to gain experience in ID-specific out of hours work, then additional experience may be gained through undertaking ID emergency work in the daytime, and by working with ID crisis/intensive support teams where available.

Higher trainee caseloads should include a broad range of clinical cases with varying - and increasing - levels of complexity, including patients across the full range of intellectual impairment. It is important that caseloads are tailored to the training needs of individual trainee and designed to ensure trainees achieve the key capabilities in the specialty curriculum. Factors such as complexity and intensity of support needs of individuals on the caseload will need to be taken into consideration when determining the appropriate number. Caseloads should include an appropriate mix of new and ongoing cases and over the course of one year of training in a community placement, it is expected that trainees will complete regular new patient assessments, covering a broad spectrum of clinical presentations and diagnostic complexity.

Trainees will develop advanced skills in the assessment and treatment of mental disorders and neurodevelopmental disorders in adults with intellectual disability. They will work with multidisciplinary teams to formulate and manage behaviours that challenge. They will understand the importance of a person-centred holistic approach, which includes a biological, psychological, and social approach, and liaise effectively with the families, carers and wider systems of support.

Trainees in Learning (Intellectual) Disability Psychiatry will attend and present at a specialist academic programme arranged within their training scheme. Attendance at relevant external conferences and study days is also expected and will be approved according to individual training needs and local study leave approval procedures.

In addition to developing specialist skills required of a Consultant Psychiatrists in Learning (Intellectual) Disability, trainees will develop transferrable skills including leadership and management, emergency psychiatry and complex decision making. It is recommended that trainees complete at least one project with a view to improve patient safety, health, and/or clinical outcomes per year and present their findings for wider learning.

Trainees should engage in academic research with an aim to complete a research project of a standard appropriate for publication by the end of training.

The Annual Review of Competency Progression (ARCP) is the means by which trainees are reviewed annually to assess their progression against the standards set down in the Psychiatry of Learning (Intellectual) Disability specialty curriculum.

4.2.5. Forensic Psychiatry

The purpose of Forensic Psychiatry is the assessment, care and treatment of mentally disordered offenders and others requiring similar services. Risk assessment and management and the prevention of further victimisation are core elements of this.

In order to develop the key capabilities and attain the high level outcomes required by the curriculum, it is recommended that specialty training in forensic psychiatry lasts for the equivalent of 3 years full time training in forensic psychiatric posts, and it is recommended that all substantive training posts are with accredited clinical supervisors who are on the specialty register for forensic psychiatry.

For each trainee, we recommend that the majority of their training programme comprise placements of 12 months duration to provide the necessary continuity and consistency to develop the required key capabilities. A recommended 12 months, but usually more, will be spent working substantively in medium secure inpatient services. Additional experience will include, but not be limited to, working in high or low secure hospitals, working in prisons, working with forensic psychiatric patients in the community and working with female as well as male patients or offenders. Experience of writing clinical and medico-legal reports, and of giving evidence in courts, may be gained in all these settings.

This breadth of experience will be gained through both substantive clinical placements and sessional placements. There should be scope for trainees to tailor some of these placements to their own particular clinical interests, while ensuring that they are able to develop the key capabilities set out in the curriculum.

Experience of prison Psychiatry may be gained through substantive placements or through sessional work. It is recommended that during the course of their training, a forensic trainee should provide ninety half day sessions within a custodial environment and in addition should carry out assessments of patients in custody to consider transfer to hospital.

4.2.6. Medical Psychotherapy

The clinical experience in the Advanced Training Programme in Medical Psychotherapy will consist of the equivalent of three years full time experience. in a GMC approved psychotherapy scheme, quality assured by local deaneries through the schools of psychiatry.

The trainee will be recruited into an approved national training number (NTN) with a specified major modality as outlined in the training programme.

During their higher specialist training the trainee will gain an in-depth knowledge of theory and practice into their major psychotherapeutic approach acquiring expertise in this modality, and also a broad base of clinical experience with training in two other psychotherapeutic modalities. The major approaches are psychodynamic, cognitive behavioural therapy and systemic (family) therapy.

The trainee will be based within specialist psychotherapy services throughout the duration of their training and may rotate between services during their training.

Clinical placements should last for a recommended twelve months to allow for depth of clinical experience and building up of clinical practice.

Working within specialist psychotherapy services trainees will develop capabilities in

- Delivering psychotherapy to range of patients individually, in groups, and to families.
- Undertaking psychotherapeutic consultation assessment of patients referred for psychotherapy.
- Understanding of the indications, benefits and risks of psychotherapeutic interventions.
- The triage and management of referrals for psychotherapy.
- The application of psychological approaches within a range of psychiatric settings in order to contribute to developing psychologically informed approaches and treatments across wider mental health services.
- Providing psychotherapy supervision, reflective practice and consultation to teams.
- Leadership for psychotherapy services and their development.
- The trainee will develop capabilities working with multidisciplinary colleagues across primary, secondary, tertiary and third sector care settings.
- Research into psychotherapeutic interventions and the psychological understanding of mental disorder.

The breadth of training experience will equip trainees to practice at as a consultant psychiatrist in medical psychotherapy enabling the trainee to work with complexity and apply psychological understanding using a range of approaches that are person-centred. Trainees must ensure continued personal, professional and psychological development through participation in personal psychotherapy which may be undertaken either in one-to-one setting (recommended as once weekly) or in group analysis setting throughout the course of Higher Medical Psychotherapy training. The appropriate modality of therapy will be agreed with the Training Programme Director and the relevant Educational Supervisor. Personal therapy is a prerequisite to developing self-reflection and a deep understanding of how conscious and unconscious aspects of one's mind can influence the individual's personal and professional life.

5. Curricula Framework

5.1. Curricula Structure

The curricula have been developed using the [GMC's Standards for Postgraduate Medical Curricula Excellence by Design](#) and the [Generic Professional Capabilities \(GPC\) Framework](#).

The curricula have been developed using a “**Why, What, How**” approach as follows:

- **Why** – The GPC Framework outlines the overarching learning outcomes under nine key domains.

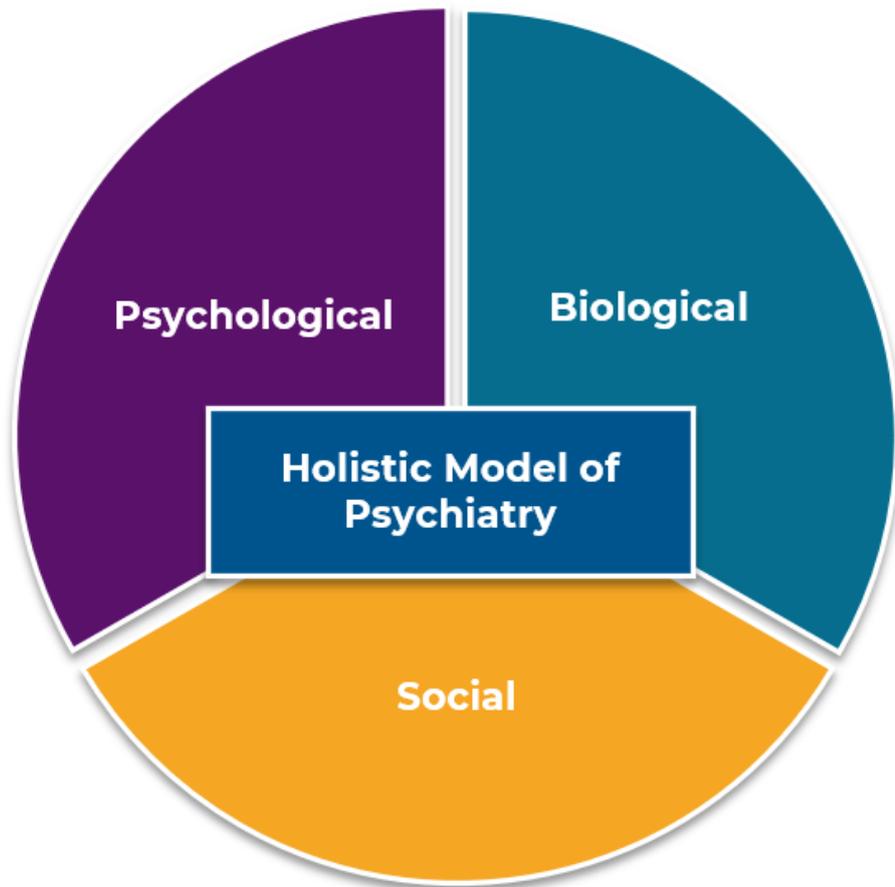

- **What** – High Level Outcomes (HLOs) and capabilities have been developed under each HLO and GPC domain, which outline what trainees need to achieve under each specific domain by the end of core and specialty Psychiatry training.
- **How** – Key Capabilities (KCs) that outline how a trainee can achieve the HLO in a specific domain.

It is important to recognise that these headings are used for structural organisation. The complexity of medical education and practice means that a considerable number of the capabilities set out in each curriculum will overlap between domains, moreover, depending upon circumstances, many capabilities will have additional components that are not defined here.

The framework consists of four key components:

- Psychiatry 'Silver Guide'
- Core, specialty and sub-specialty curricula
- Placement specific personal development plans (PDPs)
- ARCP Decision aids

5.2. Person-centred Holistic Model of Psychiatry

Fundamental to the practice to modern psychiatry are the following concepts:

- treat the patient as a whole,
- a values-based and evidenced-based clinical approach,
- multidisciplinary model of person-centred care, including parity of esteem between mental and physical health,
- shared responsibility and shared decision-making,
- social psychology developments and interventions, and biological advances and interventions, particularly in neuroscience,
- addressing the physical and mental health needs of patients,
- safe effective prescribing,
- a sustainable approach to health,
- the understanding of people's rights and the impact of society and systems on individuals.

In the light of these developments, the Curriculum Revision Working Group has undertaken wide-ranging discussion, highlighting the importance of:

- reflecting equal weighting of the components of the person-centred holistic model of psychiatry within the curriculum,
- the social and environmental context,
- a holistic person-centred care approach for patients,

- equipping Psychiatrists for developments in the service and legal landscapes.

The person-centred holistic approach underpins the specialty of Psychiatry and the key role of Psychiatrists in multidisciplinary teams.

6. Specific Curricula Requirements

6.1. Emergency Psychiatry

6.1.1. Core Psychiatry Requirements

Core trainees should complete a recommended indicative **55 on-call (including out-of-hours experience) shifts, or equivalent**, and **50 cases** for WTE trainees.

6.1.2. Higher (Specialty training) Requirements

Specialty trainees should complete a recommended indicative **55 on-call (including out-of- hours experience) shifts, or equivalent**, and **50 cases** for WTE trainees.

6.2. Sustainability

We recommend that Psychiatrists completing their core training have a firm understanding of the principles of practicing sustainably, including a focus on prevention, patient empowerment, efficient service delivery and low carbon outcomes. Where possible, those completing CT3 should be aware of the potential negative impact of healthcare on the environment including factors such as greenhouse gas emissions, excess waste and unsustainable food systems, and understand how the mental healthcare system can work to reduce these. They should recognise the impact that physical environment may have on patients and be able to think about how access to green space, physical activity and interaction with nature can be promoted in treatment strategies. They should be aware of the importance of prevention to health outcomes, including addressing the social determinants of health, and lastly, they should be aware of the potential burden on mental healthcare systems from climate change and extreme weather events both at population and individual level.

Trainees will have the opportunity to achieve capabilities in sustainability, with the expectation that opportunities are provided to establish knowledge in this area.

6.3. Statutory Approval (Section 12 and equivalent)

It is expected that trainees will be ready to apply for statutory approval by the end of CT3, with requirements met and obtained within the first 3 months of ST4 (WTE). The College provides support in meeting this requirement, and further [information can be found on our training pages](#). Please note that you will need to also look at your local arrangements and requirements for accreditation.

7. Dual Training

The GMC approves which specialties can be undertaken as 'dual training' leading to dual specialist registration. The list of approved dual specialties can be [found on our website](#). Further information on dual training can be found on the [GMC website](#).

In most cases, trainees are competitively appointed to 'dual training' specialties through a single recruitment process. Where trainees are competitively appointed to a training programme leading to dual specialist registration, trainees are expected to complete the programmes in full and obtain the competences/capabilities set out in both curricula. Application to the GMC for a CCT should only take place when both programmes are complete.

Where a trainee wishes to curtail the programme leading to dual certification and to apply to the GMC for a single CCT, the trainee must apply to the Postgraduate Dean for agreement to do so. If the Postgraduate Dean agrees, the dual certification programme will terminate and a single CCT will be pursued.

Trainees who wish to curtail a dual programme and pursue a single CCT must ensure that they have completed/obtained the following:

- The capabilities for a single CCT as stipulated in the curriculum for that specialty.
- Confirmation from the Training Programme Director that the capabilities for a single CCT have been met.
- A final ARCP outcome 6 for a single CCT.

Completion of two CCTs can be of either four or five years' duration and all training must be in GMC approved programmes.

7.1. Training combinations with a recommended four years' duration

7.1.1. General (Adult) Psychiatry and Old Age Psychiatry

An indicative two years (WTE) in designated General (Adult) Psychiatry posts; 12 months may be in a GMC approved sub-specialty of General (Adult) Psychiatry in either:

- Substance-misuse (Addiction) Psychiatry
- Liaison Psychiatry
- Rehabilitation Psychiatry

An indicative two years in designated Old Age Psychiatry Posts; one year may be in the GMC approved sub-specialty of Liaison psychiatry.

A trainee who wishes to pursue a single CCT in either old age psychiatry or adult psychiatry must ensure they have completed the recommended 36 months which must consist of two years in either old age psychiatry posts or adult psychiatry posts & one further year in another psychiatric specialty or sub-specialty post as listed above.

7.2. Training combinations with a recommended five years' duration

7.2.1. General (Adult) Psychiatry and Medical Psychotherapy

An indicative 2 years (WTE) in designated Adult Psychiatry posts; 1 year may be in a GMC approved sub-specialty of Adult Psychiatry in either:

- Substance-misuse (Addiction) Psychiatry
- Liaison Psychiatry
- Rehabilitation Psychiatry

Trainees could also spend 12 months in another but will not lead to an endorsement on the GMC Specialist Register:

- Perinatal Psychiatry
- Neuropsychiatry
- Eating Disorder Psychiatry

A recommended indicative 36 months (WTE) in designated Medical Psychotherapy placements.

A trainee who wishes to pursue a single CCT in either general (adult) psychiatry or medical psychotherapy must ensure they have completed a recommended 36 months which must consist of two years in either adult psychiatry posts and one year in another psychiatry specialty, most likely to be medical psychotherapy or 3 years in designated medical psychotherapy posts.

7.2.2. General (Adult) Psychiatry and Forensic Psychiatry

Two years in designated General Psychiatry posts one year may be in a GMC approved sub-specialty of General Psychiatry in either:

- Substance Misuse (Addiction) Psychiatry
- Liaison Psychiatry
- Rehabilitation Psychiatry

Trainees could also spend 12 months in another but will not lead to an endorsement on the GMC Specialist Register:

- Peri-natal Psychiatry
- Neuropsychiatry
- Eating Disorder Psychiatry

Three years in designated Forensic Psychiatry placements. A trainee who wishes to pursue a single CCT in either general (adult) psychiatry or forensic psychiatry must ensure they have completed the recommended indicative 36 months which must consist of two years in either general psychiatry posts and one year in another psychiatry specialty, most likely to be forensic psychiatry, or three years in designated forensic psychiatry posts.

7.2.3. Forensic Psychiatry and Medical Psychotherapy

- 2 years in designated Forensic Psychiatry placements
- 2 years in designated Medical Psychotherapy Placements
- 1 year in a Forensic Medical Psychotherapy setting

A trainee who wishes to pursue a single CCT in either forensic psychiatry or medical psychotherapy must ensure they have completed the recommended 36 months which should consist of 3 years' in either designated forensic psychiatry posts or 3 years in designated medical psychotherapy posts. Forensic Psychiatry & Adult Psychiatry which must consist of:

- 3 years in designated Forensic Psychiatry placements
- 2 years in designated Adult Psychiatry placements

7.2.4. Child & Adolescent Psychiatry and Forensic Psychiatry

- 2 years in designated Forensic Psychiatry placements.
- 2 years in designated Child & Adolescent Psychiatry Placements
- 1 year in a Forensic Psychiatry setting for adolescents & children.

A trainee who wishes to pursue a single CCT in either forensic psychiatry or child & adolescent psychiatry must ensure they have completed a recommended 36 months which should consist of 3 years' in either designated forensic psychiatry posts or 3 years in designated child & adolescent psychiatry posts.

7.2.5. Child & Adolescent and Psychiatry of Learning (Intellectual) Disability

- 2 years in designated Psychiatry of Learning (Intellectual) Disability placements
- 2 years in designated Child & Adolescent Psychiatry Placements
- 1 year in a Psychiatry of Learning (Intellectual) Disability setting for adolescents & children.

A trainee who wishes to pursue a single CCT in either Psychiatry of Learning (Intellectual) Disability or Child & Adolescent Psychiatry must ensure they have completed a recommended 36 months which should consist of 3 years' in either designated Child & Adolescent Psychiatry posts or 3 years' in Psychiatry of Learning (Intellectual) Disability posts, up to one year of which may be in a Psychiatry of Learning (Intellectual) Disability setting for adolescents and children or another relevant psychiatry specialty.

7.2.6. Child & Adolescent Psychiatry and Medical Psychotherapy

- 2 years in designated Child and Adolescent psychiatric posts.
- 2 years in designated psychotherapy posts
- 1 year in which there is an integration between posts to achieve the curriculum competencies- for example this could include delivering psychological therapy while working on in a CAMHs in patient or outpatient setting.

A trainee who wishes to pursue a single CCT in either child and adolescent psychiatry or medical psychotherapy must ensure they have completed a recommended indicative 36 months which must consist of three years in either child and adolescent posts and one year in another psychiatry specialty, or 3 years in designated medical psychotherapy posts.

8. Sub-specialty endorsements

In psychiatry, it is possible to be awarded a sub-specialty (endorsement) certificate and have this sub-specialty indicated on the specialist register against a doctor's name.

This applies when a doctor has successfully completed a sub-specialty programme approved by the GMC and the award is dependent on the applicant also having completed training in the 'parent' CCT specialty and gaining entry to the specialist register. This training may be undertaken at the same time as the parent specialty training programme.

Trainees undertaking a GMC approved training programme in Adult Psychiatry or a dual training programme in Adult Psychiatry may undertake training in one of the three GMC approved sub-specialties of Adult Psychiatry and apply for an endorsement on completion of their training programme. The three GMC approved sub-specialties of Adult Psychiatry are:

- Substance-misuse (Addiction) Psychiatry
- Liaison Psychiatry
- Rehabilitation Psychiatry

Trainees undertaking a GMC approved training programme in Old Age Psychiatry may undertake training in the GMC approved sub-specialty of Liaison Psychiatry and apply for an endorsement on completion of their training.

On completion of their training programme trainees can apply for the endorsement on the GMC Specialist Register.

Trainees wishing to obtain an endorsement must inform the College in advance. Training for an endorsement should be an indicative 12 months' whole time equivalent (WTE) training on a GMC approved training programme.

It is possible to pursue sub-specialty training after the doctor has been entered on the specialist register, usually after competitive entry to an approved sub-specialty training programme. Details of the sub-specialty training programmes currently approved by the GMC [can be found here](#).

Where sub-specialty training is undertaken within the envelope of a specialty training programme, trainees should apply for a sub-specialty certificate at the same time as they apply for their CCT or CESR(CP). The RCPsych CCT or CESR(CP) recommendations to the GMC should include details of any sub-specialty training programmes successfully completed by a trainee. Doctors appointed to a GMC-approved sub-specialty programme after entry to the specialist register can apply to the GMC for a sub-specialty certificate on successful completion.

9. Quality assurance of our curricula

9.1. Amendments Process

In order to ensure a robust oversight of potential curricula changes, we have set out a clear process for monitoring amendments to the curricula. outlines the process.

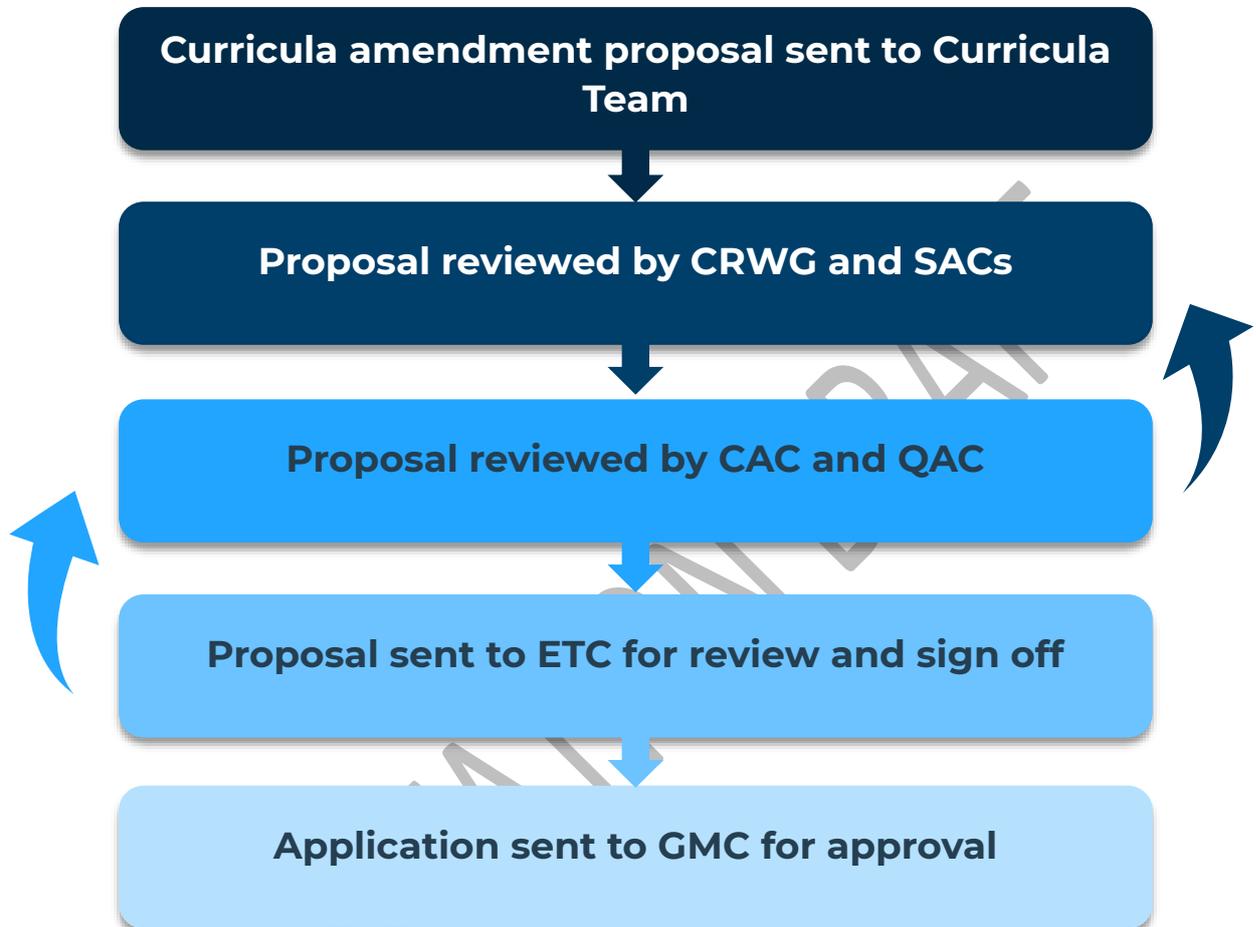

Figure 3. RCPsych internal curricula amendments process

The process is outlined as follows:

1. Proposed amendments are submitted via our online proforma to our Curricula & Quality Assurance Team,
2. Proposals are shared with the Curricula Revision Working Group (CRWG) and Specialty Advisory Committees (SACs) (where required),
3. Once reviewed, proposals with recommendations from the CRWG and SACs are sent to the Curriculum and Assessment Committee (CAC) and Quality Assurance Committee (QAC) for review,
4. All amendments are sent to the Education and Training Committee (ETC) for sign off. Where additional information is required, this will be highlighted,
5. The curriculum team then feedback to the proposer and prepare for application to the GMC where appropriate.

A record of all amendments will be recorded on our amendment's tracker, which will include a record of decisions and outcomes.

Additional information regarding quality assurance in training can be viewed on [our training webpages](#).

10. Roles and Responsibilities

10.1. General Medical Council (GMC)

The GMC is the medical regulatory body for the UK. The work they do is set out by the by the Medical Act (1983), and covers five key areas:

- The medical register – a register of all qualified doctors in the UK.
- Standards for doctors – the GMC set out the standards of professional values, knowledge, skills and behaviours required of all doctors working in the UK.
- Education and training – they set standards for undergraduate and postgraduate medical education, and monitor training environments.
- Revalidation – the GMC ensure that doctors regularly keep their knowledge and skills up to date by ensuring each doctor has an annual appraisal.
- Addressing concerns – the GMC investigate concerns raised about a doctor's behaviour or practice.

10.2. UK health departments

Policy on medical education is the responsibility of health ministers. Coordination and alignment of those policies across the UK is through the Medical Education UK Reference Group. Detailed policy issues are remitted to health officials, who will bring the contents to the attention of their respective health ministers.

10.2.1. Health Education England

Health Education England (HEE) supports the delivery of excellent healthcare and health improvement to the patients and public of England, by ensuring that the workforce has the right numbers, skills, values and behaviours, at the right time and in the right place. It has five national functions:

- providing national leadership on planning and developing the healthcare and public health workforce
- promoting high-quality education and training that is responsive to the changing needs of patients and local communities, including responsibility for ensuring the effective delivery of important national functions such as medical trainee recruitment.
- ensuring security of supply of the healthcare and public health workforce
- appointing and supporting the development of Local Education and Training Boards (LETBs)
- allocating and accounting for NHS education and training resources, and accounting for the outcomes achieved

HEE will support healthcare providers and clinicians to take greater responsibility for planning and commissioning education and training through the development of Local Education and Training Boards, which are statutory committees of HEE. While HEE is 9 | Version: GG8 incorporating the Purple Guide, 31 March 2020 accountable for English issues only, it works with stakeholders as appropriate in areas where there may be implications for the rest of the UK.

10.2.2. Health Education and Improvement Wales

Established on 1 October 2018, Health Education and Improvement Wales (HEIW) is the only Special Health Authority within NHS Wales. HEIW sits alongside Health Boards and Trusts, and has a leading role in the education, training, development and shaping of the healthcare workforce in Wales in order to ensure high-quality care for the people of Wales.

The key functions of HEIW include:

- working closely with partners and key stakeholders, and planning ahead to ensure the health and care workforce meets the needs of the NHS and people of Wales, now and in the future
- being a reputable source of information and intelligence on the Welsh health and care workforce
- commissioning, designing and delivering high-quality, value for money education and training, in line with standards
- using education, training and development to encourage and facilitate career progression
- supporting education, training and service regulation by playing a key role in representing Wales, and working closely with regulators
- developing the healthcare leaders of today and the future
- providing opportunities for the health and care workforce to develop new skills
- promoting health and care careers in Wales, and Wales as a place to live
- supporting professional organisational development in Wales
- continuously improving what HEIW does and how it does it

10.2.3. NHS Education for Scotland

NHS Education for Scotland (NES) is a national special health board, established in 2002, working in partnership with its stakeholders to provide education, training and workforce development for those who work in and with NHS Scotland. NES has a Scotland-wide role in undergraduate and postgraduate education as well as continuing professional development across all professional groups, and it maintains a local perspective through centres in Edinburgh, Glasgow, Dundee, Aberdeen and Inverness with over 1,000 staff who work closely with frontline educational support roles and networks.

The overarching aim of NES is to deliver first-class medical education and training for Scotland to ensure safe, effective care for patients, both now and in future.

Working with all its partners, NES aims to achieve this by:

- organising and providing excellent training programmes that attract high-quality doctors to Scotland,
- meeting and exceeding all regulatory standards through consistent application of best practice and the principles of continual improvement,
- supporting the ongoing education and training of Scotland's trained doctors, together with those who support their work.

NES also supports the appraisal and revalidation of all doctors in Scotland as well as several cross-cutting and multi-professional programmes, including patient safety, quality improvement of patient care, and the development of Scotland's remote and rural workforce.

In addition, NES prepares professionals for practice in clinical psychology, pharmacy, optometry and healthcare science, and it provides access to education for nursing, midwifery and allied health professionals, healthcare chaplains and healthcare support workers as well as administrative, clerical and support staff.

The Scotland Deanery of NES was created on 1 April 2014 from the four extant deaneries in Scotland. The Scotland Deanery is responsible for managing the training of Scotland's postgraduate trainee doctors, who deliver care every day while in hospitals and general practices within NHS Scotland. Staff in the regional teams work closely with the wider NHS through the regional workforce planning groups.

The Scottish model also allows its four regions to work together as part of the Medical Directorate of NES, ensuring equity of recruitment and management approach. National policies and working committees, such as Specialty Training Boards, mean that Scotland can consistently deliver a high-quality approach.

Within the Scotland Deanery, Postgraduate Deans and General Practice Directors have identical roles and responsibilities for training; they provide strategic leadership and direction for postgraduate medical education and training to meet the requirements of the GMC. They take advice from the Colleges and Faculties to assist them.

10.2.4. The Northern Ireland Medical and Dental Training Agency

The Northern Ireland Medical and Dental Training Agency (NIMDTA) is an arm's length body sponsored by the Department of Health for Northern Ireland (DoH) to train medical and dental professionals for Northern Ireland. It achieves this through:

- the commissioning, promotion and oversight of postgraduate medical and dental education and training throughout Northern Ireland,
- the recruitment, selection and allocation of doctors and dentists to foundation, core and specialty training programmes,
- assessment of the performance of trainees through annual review and appraisal,
- close partnership with local education providers (principally Health and Social Care Trusts and general practices) to ensure that the training and

supervision of trainees supports the delivery of high-quality, safe patient care.

NIMDTA is accountable for the performance of its functions to the Northern Ireland Assembly through the Minister of Health and to the GMC for ensuring that the standards set by the GMC for medical training, educational structures and processes are achieved.

It is recognised that delivering the curriculum requires the coordinated efforts of a number of parties.

Trainees, Clinical, Psychiatric and Educational Supervisors, Training Programme Directors, and Postgraduate Schools of Psychiatry across the UK all have responsibility for ensuring that the curriculum is delivered as intended.

10.3. Supervision

All supervisors as detailed below will have [“Recognition of Trainer” status](#) from the GMC via their annual Appraisal and Revalidation.

Supervision in postgraduate psychiatry training encompasses three core aspects:

- Clinical Supervision
- Psychiatric Supervision
- Educational Supervision

Supervision is designed to:

- Ensure safe and effective patient care,
- Establish an environment for learning and educational progression,
- Provide reflective space to process dynamic aspects of therapeutic relationships, maintain professional boundaries and support development of resilience, well-being and leadership.

Further information about supervision is outlined in appendix 2.

10.3.1. Educator and training support

All Supervisors and TPDs should keep up to date with training requirements, including education related CPD. Specific training courses around doctors needing performance support should be built into educator’s CPD programmes and accessed proactively.

Clinical Supervisors who are managing trainees with performance difficulties should be made aware of the training needs before the placement commences and receive a robust handover; joint working with the trainee’s Educational Supervisor around training needs and objectives for the placement should take place, supported by the TPD, with advice sought from HEE as required. Increased frequency of Educational Supervision meetings should support the placement.

10.3.2. Clinical Supervision

The clinical work of all trainees must be supervised by an appropriately qualified senior psychiatrist. All trainees must be made aware day-to-day who the

nominated clinical supervisory psychiatrist is in all clinical situations. This will usually be the substantive consultant whose team they are attached to but in some circumstances, this may be delegated to other consultants, to a senior trainee or to an appropriately experienced senior non-consultant grade doctor during periods of leave, out-of-hours etc.

Clinical supervision must be provided at a level appropriate to the needs of the individual trainee. No trainee should be expected to work to a level beyond their competence and experience; no trainee should be required to assume responsibility for or perform clinical techniques in which they have insufficient experience and expertise. Trainees should only perform tasks without direct supervision when the supervisor is satisfied regarding their competence; both trainee and supervisor should at all times be aware of their direct responsibilities for the safety of patients in their care.

The clinical supervisor:

- Should be involved with teaching and training the trainee in the workplace.
- Must support the trainee in various ways: a) direct supervision, in the ward, the community or the clinic consulting room b) close but not direct supervision, e.g., in the next door room, reviewing cases and process during and/or after a session c) regular discussions, review of cases and feedback.
- May delegate some clinical supervision to other members of clinical team as long as the team member clearly understands the role and the trainee is informed. The trainee must know who is providing clinical supervision at all times.
- Will perform workplace-based assessments for the trainee and will delegate performance of WPBA's to appropriate members of the multi-disciplinary team.
- Will provide regular review during the placement, both formally and informally to ensure that the trainee is obtaining the necessary experience. This will include ensuring that the trainee obtains the required supervised experience in practical procedures and receives regular constructive feedback on performance.

It is recommended that Clinical Supervision is 0.25PA from clinical PAs per trainee.

10.3.3. Psychiatric Supervision

Psychiatrists in training will require regular reflective 1:1 supervision with a nominated substantive consultant with specialist registration in a Psychiatric Specialty. This will usually be the nominated consultant who is also providing clinical, and sometimes educational, supervision.

Psychiatric supervision is required for all trainees throughout core and higher training in Psychiatry and is recommended as one hour per week. It plays a critical role in the development of Psychiatrists in training in developing strategies for resilience, well-being, maintaining appropriate professional boundaries and understanding the dynamic issues of therapeutic relationships. It is also an opportunity to reflect on and develop leadership capabilities and is informed by

psychodynamic, cognitive coaching models. It is recommended that consultants delivering psychiatric supervision have protected time within their job plans to deliver this. This aspect of supervision requires 0.25 PA per week per trainee.

Trainees should utilise this time to set up their Placement Specific Professional Development Plans (PDPs).

The supervisor undertaking psychiatric supervision is responsible for producing the Psychiatric Supervision Report (PSR) informing the ARCP process and will ensure contributions are received from key individuals involved in the local training programme including clinical supervisors.

Those providing psychiatric supervision are expected to have undergone specific training and keep up their educational CPD in order to remain accredited.

10.3.4. Educational Supervision

An Educational Supervisor will usually be a Consultant Psychiatrist, Senior Lecturer or Professor, who has been appointed to a substantive Consultant Psychiatry position. They are responsible for the educational supervision of one or more doctors in training who are employed in an approved training programme. The Educational Supervisor will require specific experience and training for the role. Educational Supervisors are also expected to maintain their educational CPD and attend refresher courses. Educational Supervisors will work with a small (no more than five) number of trainees. Sometimes the Educational Supervisor will also be the Psychiatric/Clinical Supervisor, as determined by explicit local arrangements, for example due to limited numbers of training placements/trainers being available.

All trainees will have an Educational Supervisor whose name will be notified to the trainee. The precise method of allocating Educational Supervisors to trainees, i.e. by placement, year of training etc, will be determined locally and will be made explicit to all concerned.

The Educational Supervisor:

- Works with individual trainees to develop and facilitate an individual learning plan that addresses their educational needs. The learning plan will guide learning that incorporates the domains of knowledge, skills and attitudes.
- Will act as a resource for trainees who seek specialty information and guidance.
- Will liaise with the Local specialty Programme Tutor/Lead and other members of the department to ensure that all are aware of the learning needs of the trainee.
- Will oversee and on occasions, perform, the trainee's workplace-based assessments.
- Will monitor the trainee's attendance at formal education sessions, their completion of audit projects and other requirements of the Programme.
- Should contribute as appropriate to the formal education programme.
- Will produce structured reports as required by the School/Deanery.

In order to support trainees, and Educational Supervisor will:

- Oversee the education of the trainee, act as their mentor and ensure that they are making the necessary clinical and educational progress.
- Meet the trainee at the earliest opportunity (preferably in the first week of the programme), to ensure that the trainee understands the structure of the programme, the curriculum, portfolio and system of assessment and to establish a supportive relationship. At this first meeting the educational agreement should be discussed with the trainee and the necessary paperwork signed and a copy kept by both parties. It is recommended that trainees meet with their Educational Supervisors three times throughout their placement. In particular, a meeting midway through a placement is considered important.
- Ensure that the trainee receives appropriate career guidance and planning.
- Provide the trainee with opportunities to comment on their training and on the support provided and to discuss any problems they have identified.

We advise that the Educational Supervisor is assigned to a trainee for the duration of their training period both within core and higher training.

Educational Supervision should be 0.125PA per trainee per week.

10.3.5. Training Programme Directors

The Coordinating/Programme Director is responsible for the overall strategic management and quality control of the core training programme within the Training School/Deanery. The Deanery (Training School) and the relevant Service Provider (s) should appoint them jointly. They are directly responsible to the Deanery (School) but also have levels of accountability to the relevant service providers(s). With the increasing complexity of training and the more formal monitoring procedures that are in place, the role of the Programme Director must be recognised in their job plan, with time allocated to carry out the duties adequately. One programmed activity (PA) per week is generally recommended for 25 trainees. In a large scheme 2 PA's per week will be required.

For example, a TPD in specialty training will:

- participate in the local arrangements developed by the Postgraduate Dean, which may include Heads of School or Chairs of Specialty Training Boards, to support the management of the specialty training programme(s), and work with delegated College/Faculty representatives (e.g. College/Faculty, Regional Advisors) and national College/Faculty training committees or Specialty Advisory Committees to ensure that programmes deliver the specialty curricula and enable trainees to gain the relevant competences, knowledge, skills, attitudes and experience
- take into account the collective needs of the trainees in the programme when planning individual programmes.
- with relevant Directors of Medical Education provide support for Clinical, Psychiatric and Educational supervisors in the programme.
- contribute to the ARCP process in the specialty.

- help the Postgraduate Dean manage trainees who are running into difficulties by supporting educational supervisors in their assessments and in identifying remedial placements where required.
- ensure (with the help of administrative support) that employers are normally notified at least three months in advance of the name and relevant details of the trainees who will be placed with them. From time to time, however, it might be necessary for TPDs to recommend that trainees be moved at shorter notice.
- produce timely reports on the training programme, on individual trainees and on the review of information regarding the quality of training, as required by HEE, NES, the Wales Deanery and NIMDTA.
- have career management skills (or be able to provide access to them) and be able to provide career advice to trainees in their programme.
- act as positive advocates for their specialty in order to maximise recruitment (e.g., by coordinating taster sessions during foundation training, career fair representation or liaison with specialty leads and with the Colleges/Faculties).

In addition, there should be a Training Programme Director for the School/Deanery Core Psychiatry Training Programme who will undertake the above responsibilities with respect to the Foundation and Core Psychiatry Programmes and in addition:

- Will implement, monitor and improve the core training programmes in the Services/Trust(s) in conjunction with the Directors of Medical Education and the School/Deanery and ensure that the programme meets the requirements of the curriculum and the Service/Trust and complies with contemporary College Guidance & Standards and GMC Generic Standards for Training.
- Will take responsibility with the Psychotherapy Tutor for the provision of appropriate psychotherapy training experiences for trainees. This will include:
 - Ensuring that Psychiatric Supervisors are reminded about and supported in their task of developing the trainee's capabilities in a psychotherapeutic approach to routine clinical practice.
 - Advising and supporting trainees in their learning by reviewing progress in psychotherapy.
 - Ensuring that there are appropriate opportunities for supervised case work in psychotherapy.

10.3.6. Medical Psychotherapy Tutor

It is a GMC requirement that every core psychiatry training scheme should have a qualified Medical Psychotherapy Tutor (RCPsych 2012) who will lead on the development of core psychotherapeutic capabilities. The Medical Psychotherapy Tutor will have undergone higher/advanced specialist training in medical psychotherapy with a CCT (Certificate of Completion of Training) in Medical Psychotherapy (or equivalent). The Medical Psychotherapy Tutor is responsible for the organisation and educational governance of psychotherapy training in the core psychiatry training scheme in a School of Psychiatry/equivalent in line with the GMC requirement of medical psychotherapy leadership in core psychotherapy training (GMC medical psychotherapy report and action plan, 2013).

It is the responsibility of the Director for Medical Education (DME) within each trust to ensure that provision of services is designed to ensure trainees have the opportunity to fulfil this training requirement.

The Medical Psychotherapy Tutor:

- Offers a clinical service in which their active and ongoing psychotherapy practice provides a clinical context for psychotherapy training in accordance with GMC requirements (2013).
- Ensures that all core trainees have the opportunity to complete the psychotherapy requirements of the core curriculum.
- Advises and supports core and higher trainees in their learning by reviewing progress in psychotherapy.
- Oversees the establishment and running of the core trainee Balint/case-based discussion group.
- Provides and oversees psychotherapy assessments for patients and is responsible for ensuring sufficient cases are provided and assessed as suitable cases for core and higher trainees. There is evidence that this is best provided within a dedicated psychotherapy service (UK Psychotherapy Training report 2018).
- Oversees the waiting list of therapy cases for core trainees and higher trainees.
- Monitors the selection of appropriate short and long therapy cases in accordance with the core curriculum.
- Selects and supports appropriate psychotherapy case supervisors to supervise and assess the trainees.
- Ensures the psychotherapy case supervisors are aware of the aims of psychotherapy training in psychiatry and are in active practice of the model of therapy they supervise according to GMC requirements (2013)
- Ensures the psychotherapy case supervisors are trained in the Psychotherapy Workplace Based Assessments (WPBAs).
- Differentiates the formative assessment of the SAPE (Structured Assessment of Psychotherapy Expertise) which the supervisor completes from the summative PACE (Psychotherapy Assessed Clinical Encounter) which the Medical Psychotherapy Tutor (or their delegate) completes for the ARCP.
- Ensures active participation of medical and non-medical psychotherapy supervisors in the ARCP process.
- Maintains and builds on the curriculum standard of core psychotherapy training in the School of Psychiatry through the ARCP process.

10.3.7. Assessors

Assessors are members of the healthcare team, who need not be educational or Clinical, Psychiatric or Educational supervisors, who perform workplace-based assessments (WPBA's) for trainee psychiatrists. In order to perform this role, assessors must be competent in the area of practice that they have been asked to assess and they should have received training in assessment methods. The training will include standard setting, a calibration exercise and observer training. Assessors should also have up-to-date training in equality and diversity awareness. While it is

desirable that all involved in the training of doctors should have these elements of training, these stipulations do not apply to those members of the healthcare team that only complete multi-source feedback forms (mini-PAT) for trainees.

It is not necessary for assessors to have prior knowledge of a trainee when completing a WPBA, but they should be a Consultant, ST, Associate Specialist, or Senior Nurse, Psychologist/AHP or Social Worker who feels confident to assess the case.

- For CT1-CT3 trainees; nurses, psychologists/AHPs and social workers at band **7 or equivalent** (e.g., grade 9 for social workers) can be assessors.
- For ST4-ST6 trainees; nurses, psychologists/AHPs and social workers at band **8 or equivalent** (e.g., grade 10 for social workers) can be assessors.
- CT1-CT3 trainees cannot assess each other, and ST4-6 trainees cannot assess each other but ST4-ST6 trainees can assess Core trainees.

Trainees should try and use a range of different assessors (ideally a different one for each assessment).

As always, we would recommend that trainees check with their Psychiatric Supervisor if they are unsure about the suitability of a particular assessor.

10.4. Trainee Responsibilities

Responsibilities for trainees include:

- Act professionally and take appropriate responsibility for patients under their care and for their training and development.
- Ensure they attend the one hour of Psychiatric supervision per week, which is focused on discussion of individual training matters and not immediate clinical care. If this supervision is not occurring the trainee should discuss the matter with their Educational Supervisor or Training Programme Director.
- Receive clinical supervision and support with their clinical caseload appropriate to their level of experience and training.
- Be aware of and ensure that you have access to a range of learning resources including:
 - a local training course (e.g., MRCPsych course, for Core Psychiatry trainees).
 - a local postgraduate academic programme.
 - the opportunity (and funding) to attend courses, conferences and meetings relevant to their level of training and experience.
 - appropriate physical or online educational resources.
 - the advice and support of an audit lead or similar.
 - supervision and practical support for research with protected research time appropriate to grade.
- Make yourself familiar with all aspects of the curriculum and assessment programme and keep a portfolio of evidence of training.
- Ensure you make it a priority to obtain and benefit from relevant experience in psychotherapy.
- Collaborate with their Psychiatric supervisor to:

- agree educational objectives for each post.
 - maximize the educational benefit of 1 hour per week of psychiatric supervision sessions.
 - undertake workplace-based assessments, assessed by your Clinical Supervisors, Psychiatric Supervisor and other members of the multidisciplinary team.
 - use constructive criticism to improve performance.
 - regularly review the placement to ensure that the necessary experience is being obtained.
 - discuss pastoral issues if necessary.
- Have regular contact, with a recommended three sessions per year, with your Educational Supervisor to:
 - develop a personal learning and development plan with a signed educational agreement.
 - ensure that workplace-based assessments and other means of demonstrating developing capability are appropriately undertaken.
 - review examination and assessment progress.
 - regularly refer to your portfolio to inform discussions about your achievements and training needs.
 - receive advice about wider training issues.
 - have access to long-term career guidance and support.

For higher trainees, it would be expected that organisation and initiation of meetings would sit with the trainee.

- Participate in an Annual Review of Competence Progression (ARCP) to determine your achievement of capabilities and progression to the next stage of training.
- On appointment to a specialty training programme the trainee must fully and accurately complete Form R (*not required in Scotland*) and return it to the Deanery with a coloured passport size photograph. The return of Form R confirms that the trainee is signing up to the professional obligations underpinning training. Form R will need to be updated (if necessary) and signed on an annual basis to ensure that the trainee re-affirms his/her commitment to the training and thereby remains registered for their training programme. The Form R is currently being integrated into the Portfolio Online.
- Send to the postgraduate dean a signed copy of the Conditions of Taking up a training post, which reminds you of your professional responsibilities, including the need to participate actively in the assessment process. The return of the Form R initiates the annual assessment outcome process.
- Inform the postgraduate dean and the Royal College of Psychiatrists of any changes to the information recorded.
- Ensure you keep the following records of your training:
 - Copies of all Form Rs for each year of registering with the deanery.
 - **Copies of ARCP forms for each year of assessment.**
 - Any correspondence with the postgraduate deanery in relation to your training.

- Any correspondence with the Royal College in relation to their training.
- Make yourself aware of local procedures for reporting concerns about your training and personal development and if such concerns arise, you should report them in a timely manner.

10.5. Managing Poor Performance

For trainees where performance difficulties are highlighted, referral to specific support services should be considered. Referral should be made in discussion with the trainee and TPD and should be done in a timely manner, however if trainee insight and engagement proves challenging, an ARCP Panel recommendation may be required. Examples of such services include:

- **Training Support/Professional Support & Wellbeing Services** – work with issues impacting on educational performance and progression, including communication skills, time management and also assessment of specific learning difficulties e.g., dyslexia.
- **Occupational Health Services** – Generic Occupational Health Services will be available through the trainee’s employer and should be involved when a trainee’s health is impacting on their fitness to work. Specialist Occupational Health advice may be sought if there are issues regarding fitness to train.
- Trainees with disabilities should receive **support and appropriate Reasonable Adjustments made**, in consultation with Occupational Health, to enable them to meet their capabilities. If the necessary adjustments make it impractical for a trainee to achieve their capabilities, then this should be escalated by the TPD to the Head of School and advice sought from the Dean or designated APD.

Examples of poor performance can be seen below (Paice, 2006):

- *The ‘Disappearing Act’* – Difficulty contacting a trainee; frequent absences; lateness.
- *Low work rate* – Struggling to keep up with the work including struggling with performing procedures.
- *‘Ward Rage’* – Finding that you are on a ‘short fuse’.
- *Rigidity* – Finding you struggle to tolerate ambiguity; finding it difficult to compromise; struggling to be flexible, finding it difficult to lead (appropriate to your stage of training), difficulty being able to use initiative, prioritise work and adapt to changing circumstances.
- *‘Bypass syndrome’* – Avoiding seeking doctor’s opinion for help.
- *Career problem* – Difficulty with undertaking examinations; uncertainty regarding career choices
- *Insight failure* – Rejection of constructive criticism; defensiveness.

If you find yourself experiencing any of the above – please ask for help.

10.5.1. Support for Poor Performance

Trainee poor performance will be monitored and managed by their Psychiatric Supervisor, via the Psychiatric Supervision Report (PSR). Additional support is

provided through Educational and Clinical Supervision as required. Trainees and trainers are encouraged to address performance issues early on.

11. Time out of training

11.1. Out of Programme (OOP)

Trainees can apply for a period of time out of training, known as going Out of Programme (OOP). All out of programme has to be approved by your postgraduate dean. Trainees out of programme may also need approval from the RCPsych. Applications for OOP should be discussed with trainees' Training Programme Director (TPD) and Educational Supervisor (ES) as early as possible.

Approval can take up to three months, and trainees need to therefore give their employer (current and/or next) three months' notice.

Types of out of programme that trainees can apply for are as follows:

- **Out of Programme for Clinical Experience (OOPE)** – this could be to gain or enhance clinical experience relating to a specialty. OOPE doesn't count towards a CCT or CESR/CP, so approval is not required from the RCPsych.
- **Out of Programme Career break (OOPC)** – This would be used to pursue other interests, or for a period of ill health. OOPC doesn't count towards a CCT or CESR/CP so approval is not needed from the RCPsych.
- **Out of Programme for Research (OOPR)** – This is for a period of research (for example, time out to undertake an PhD). This will not normally exceed three years. OOPR can count towards a CCT or CESR/CP and will need approval from the RCPsych.
- **Out of Programme for approved clinical training (OOPT)** – This is for clinical training which isn't part of your main training programme. OOPT is normally approved for a maximum of one year, but in exceptional circumstances can be approved for up to two years. OOPT can count towards a CCT or CESR/CP and will need approval from the RCPsych.
- **Out of Programme Pause (OOPP)** – In 2019, HEE undertook a pilot outlining a new route to taking time out of training called "OOP Pause". This allows trainees to "pause" their training, with the potential to retrospectively gain approval for time to count towards their CCT. Work is still ongoing, and further information [can be found here](#).

11.2. Acting up as a Consultant (AUC)

Acting up as a consultant may count towards a CCT or CESR/CP where there is provision for these types of posts. Where acting up as a consultant in the same training programme that a trainee has enrolled onto, approval from the RCPsych is not needed. If a trainee is acting up as a consultant in a different training programme, the usual process for applying out of programme (e.g. OOPT) must be followed. At the RCPsych, we refer to this as an "OOPT-AUC".

Up to a maximum of three months whole time equivalent (for LTFT trainee the timescale is also three months WTE) spent in an 'acting up' consultant post may count towards a trainees CCT as part of the GMC approved specialty training programme, provided the post meets the following criteria:

- The trainee follows local procedures by making contact with the Postgraduate Dean and their team who will advise trainees about obtaining prospective approval.
- The trainee is in their final year of training (or possibly penultimate year if in dual training) .
- The post is undertaken in the appropriate CCT specialty.
- The approval of the Training Programme Director and Postgraduate Dean is sought.
- There is agreement from the employing trust to provide support and clinical supervision to a level approved by the trainee's TPD.
- The trainee still receives one hour per week psychiatric supervision either face-to-face or over the phone by an appropriately accredited trainer.
- Trainees retain their NTN during the period of acting up.
- Full time trainees should 'act up' in full time Consultant posts wherever possible. All clinical sessions should be devoted to the 'acting up' consultant post (i.e., there must be no split between training and 'acting up' consultant work).
- In exceptional circumstances, where no full time Consultant posts are available, full-time trainees may 'act up' in part-time consultant posts but must continue to make up the remaining time within the training programme.
- The post had been approved by the [Regional Advisor \(RA\)](#) in its current form.
- If a trainee is on-call, there must be consultant supervision.
- **If the period is at the end of the final year of the training programme, a recommendation for the award of a CCT will not be made until the report from the Psychiatric and Educational Supervisors has been received towards the end of the acting up period, and there is a satisfactory ARCP outcome (6).**

If the post is in a different training programme:

- the usual Out of Programme (OOPT) approval process applies and the GMC will prospectively need to see an application form from the deanery and a college letter endorsing the AUC post.
- a programme is a formal alignment or rotation of posts which together comprise a programme of training in a given specialty or subspecialty as approved by the GMC, which are based on a particular geographical area.

For more information on time out of training and applications to the College, please contact qualityassurance@rcpsych.ac.uk.

12. Assessment Strategy and blueprint

12.1. Purpose

The Royal College of Psychiatrists Assessment Strategy has been designed to fulfil several purposes:

- Providing evidence that a trainee is a capable and safe practitioner and that they are meeting the standards required by Good Medical Practice, and the GMC's Generic Professional Capabilities Framework (GPC).
- Creating opportunities for giving formative feedback that a trainee may use to inform their further learning and professional development.
- Drive learning in important areas of capability.
- Help identify areas in which trainees require additional or targeted training.
- Providing evidence that a trainee is progressing satisfactorily by attaining the curriculum learning outcomes.

Contribute evidence to the Annual Review of Capability Progression (ARCP) at which the summative decisions regarding progress and ultimately the award of the Certificate of Completion of Training (CCT) is made.

12.2. Assessment Blueprint

The assessment blueprint (outlined in the below matrix) shows the assessment methods that can be mapped to each High Level Outcome (HLO) domain. It is not expected that all trainees will be assessed by all possible methods in each capability. The learning needs of individual trainees will determine which capabilities they should be assessed in and the number of assessments that need to be performed. The trainee's Psychiatric and Educational Supervisors have a vital role in guiding the trainee and ensuring that the trainee's assessments constitute sufficient curriculum coverage.

12.2.1. Assessment Matrix

The assessments have been mapped to the nine domains of the GMC's Generic Professional Capabilities Framework. Trainees are encouraged to map WPBAs to all Key Capability domains where possible. The below matrix outlines the suggested spread across all KC domains (see appendix 2).

12.3. Assessment Methods

The assessment system consists of the following elements:

12.3.1. MRCPsych Examination

Two written papers (paper A and paper B) that comprise a summative assessment of the knowledge base that underpins psychiatric practice. Both papers must be passed before the doctor can proceed to the Clinical Examination (CASC).

The structure of the MRCPsych exam is as follows:

Paper A

Paper A is a three-hour paper-based examination which is comprised of 150 questions, each worth one mark (150 marks in total). It is comprised of the following:

- Two-thirds multiple choice questions (MCQ)
- One-third extended matching item questions (EMI)

Paper A covers the following sections of the [MRCPsych Syllabus](#):

- Behavioural Science and Sociocultural Psychiatry
- Human Development
- Basic Neurosciences
- Clinical Pharmacology
- Classification and Assessment in Psychiatry

The percentage split/marks are outlined as follows:

Behavioural Science and Socio-cultural Psychiatry	16.67% / 25 marks
Human Development	16.67% / 25 marks
Basic Neurosciences	25.00% / 37 or 38 marks
Clinical Psychopharmacology	25.00% / 37 or 38 marks
Classification and Assessment in Psychiatry	16.67% / 25 marks

Paper B

Paper B is a written paper which assesses critical review and the clinical topics in psychiatry. It is a three-hour exam with 150 questions (work one mark each). Questions are outlined as follows:

- One third of the paper covers [critical review](#)
- Two thirds of the paper covers clinical topics

Paper B covers the following sections of the MRCPsych Syllabus:

- Organisation and Delivery of Psychiatric Services
- Adult Psychiatry
- Old Age Psychiatry
- Psychotherapy
- Child & Adolescent Psychiatry
- Addiction Psychiatry
- Forensic Psychiatry
- Psychiatry of Learning Disability
- Critical Review

The percentage split/marks for each area are as follows:

Organisation and Delivery	5.50% / 8 marks
Adult	20.00% / 30 marks
Old Age	9.00% / 14 marks
Psychotherapy	5.50% / 8
Child & Adolescent	9.00% / 14 marks
Addictions	6.50% / 10 marks
Forensic	5.50% / 8 marks
Learning Disability	5.50% / 8 marks
Critical Review	33.50% / 50 marks

Clinical Examination (CASC)

The Clinical Examination (Clinical Assessment of Skills and capabilities - CASC) is a summative assessment of a doctor's competence in the core skills of psychiatric practice. The Clinical Assessment of Skills and capabilities (CASC) is an OSCE style examination consisting of two circuits, completed in one day.

The CASC is formed of 16 stations, and is structured as follows:

- Five stations focused on history taking, including risk assessment.
- Five stations focused on Examination – both physical and mental state, including capacity assessment.
- Six stations focused on patient management.

The two circuits are devised as follows:

Circuit One	Six stations focused on management. One station focused on examination. One station focused on history taking. Four minutes reading. Seven-minute task.
Circuit Two	Four stations focused on examination. Four stations focused on history taking. 90 seconds reading. Seven-minute task.

The CASC is marked using the Borderline Regression Method (BRM). Each station is marked by a trained examiner, who provides two sets of scores:

- Five-point 'analytic' global domain scores, ranging from 1 (poor) to 5 (excellent) for between three and five domains.
- One six-point overall global judgement which comprises of 'Excellent Pass', 'Pass', 'Borderline Pass', 'Borderline Fail', 'Fail', or 'Severe Fail'.

Further information on scoring can be viewed on the [MRCPsych Examination pages](#).

On passing the CASC, the doctor is eligible to apply for membership of the Royal College of Psychiatrists (MRCPsych) provided other requirements are also met. For further information about membership of the College, please [visit our membership pages](#).

Trainees must obtain a pass in the MRCPsych examination and achieve all core capabilities before they can be considered to have successfully completed core training.

12.3.2. Workplace Based Assessment (WPBA)

Workplace Based Assessment (WPBA) is the assessment of a doctor's performance in those areas of professional practice best tested in the workplace. The assessment of performance by WPBA will continue the process established in the Foundation Programme and will extend throughout Core and Higher Specialty Psychiatry Training. It must be understood that WPBA's are primarily tools for giving formative feedback and in order to gain the full benefit of this form of assessment, trainees should ensure that their assessments take place at regular intervals throughout the period of training.

All trainees must complete at least one case-focused assessment in the first month of each placement in their training programme.

A completed WPBA accompanied by an appropriate reflective note written by the trainee and evidence of further development may be taken as evidence that a trainee demonstrates critical self-reflection.

Clinical, Psychiatric and Educational supervisors will draw attention to those trainees aren't utilising opportunities to undertake WPBAs across the span of their training.

An individual WPBA is not a summative assessment, but outcomes from a number of WPBA's will contribute evidence to inform summative decisions.

In undertaking the review of the current curricula, we haven't altered the WPBA system, but have mapped the assessment gradings within each form to the HLO themes outlined as follows:

- 1.1 Professional Relationships
- 1.2 Professional Standards
- 2.1 Communication
- 2.2 Clinical Knowledge and Skills
- 2.3 Complexity and Uncertainty
- 3.1 Knowledge of legal and organisational frameworks
- 4.1 Health Promotion and Illness Prevention in Individuals and Community

- 5.1 Teamworking
- 5.2 Leadership
- 6.1 Patient Safety
- 6.2 Quality Improvement
- 7.1 Safeguarding
- 8.1 Education & Training
- 9.1 Conducting Research and Critical Appraisal

HLO themes have been mapped directly to the GMCs Generic Professional Capabilities (GPC) Framework.

The WPBA tools consist of:

- **Assessment of Clinical Expertise (ACE)** in which an entire clinical encounter is observed and rated thus providing an assessment of a doctor's ability to assess a complete case.
- **Assessment of Teaching (AoT)** enables an assessment to be made of planned teaching carried out by the Trainee, which is a requirement of this curriculum.
- **Case Based Discussion (CBD)** is also used in the Foundation Programme and is an assessment made on the basis of a structured discussion of a patient whom the Trainee has recently been involved with and has written in their notes.
- **Case Based Discussion Group Assessment (CBDGA)** has been developed by the College to provide structured feedback on a trainee's attendance and contribution to case discussion groups (also known as Balint- type groups) in Core Psychiatry Training.
- **Direct Observation of non-Clinical Skills (DONCS)** has been developed by the College from the Direct Observation of Procedural Skills (DOPS). The DONCS is designed to provide feedback on a doctor's performance of non-clinical skills by observing them chairing a meeting, teaching, supervising others or engaging in another non-clinical procedure.
- **Direct Observation of Procedural Skills (DOPS)** is also used in the Foundation Programme and is similar to mini-ACE except that the focus is on technical and procedural skills.
- **Journal Club Presentation (JCP)** similar to CP, this enables an assessment to be made of a Journal article/research/audit project presented by the Trainee.
- **Mini-Assessed Clinical Encounter (mini-ACE)** modified from the mini-Clinical Evaluation Exercise (mini-CEX) used in the Foundation Programme, part of a clinical encounter, such as history-taking, is observed and rated.
- **Multi-Source Feedback (MSF)** is obtained using the Mini Peer Assessment Tool (mini-PAT), which is an assessment made by a cohort of co-workers across the domains of Good Medical Practice. Trainees should nominate 10-12 suitable assessors who they currently work with, for the mini-PAT assessment. Ideally this should include no more than two assessors in any one position (i.e. two consultants, two nurses, two peers, two juniors, two admin, two healthcare professionals etc). Trainees should nominate their named Clinical Supervisor, that is, the consultant who is responsible for the majority of clinical supervision in their current placement, unless stated otherwise by their deanery. This may or may not be the same person as the trainee's educational supervisor. **The**

trainee must discuss/agree with their Psychiatric Supervisor those who are to be nominated.

- A valid mini-PAT requires at least six responses.
- **Psychotherapy Assessment of Clinical Expertise (PACE)** has been developed by the College to provide evidence of satisfactory completion of a psychotherapy case. Should be overseen by the Psychotherapy Tutor, a Consultant Psychiatrist in Medical Psychotherapy.
- **Structured Assessment of Psychotherapy Expertise (SAPE)** has been developed by the College to provide evidence of satisfactory completion of a psychotherapy case.

Further information on training and assessments can be found on the [RCPsych training pages](#). Recommended numbers per specialty can be found in Appendix 2.

12.3.3. Reflective Practice

Reflective practice is important in ensuring trainees and trainers reflect on their practice, using reflection to further develop skills. We encourage reflective practice using the available reflective practice form on the trainee eportfolio. Further information on the importance of reflective practice [can be found here](#).

13. Professional Development Sessions

Professional Development Sessions (PDS) are an integral part of the psychiatry higher training programme which are currently known as 'Special Interest Sessions' throughout the higher psychiatry training curricula.

13.1. Description

Higher trainees require time separate to clinical duties to enable them to fulfil both the breadth and depth of the curriculum. These sessions provide learning opportunities that might not otherwise be available to them. It is anticipated that the trainee will undertake a range of PDS during their higher training, according to their training and development needs.

PDS consist of two sessions per week (pro-rata for LTFT trainees) and are separate to weekly teaching programmes for higher trainees, study leave and mandatory training requirements (e.g., risk assessment/fire safety/Mental Health Act/information governance training etc).

A plan for professional development sessions must be created prospectively and agreed with the Educational Supervisor/Training Programme Director as part of a trainees' Personal Development Plan (PDP). The activities during PDS will align with the curriculum, specifically the HLOs and require evidence of achievement such as appropriate WBPAs.

For example, PDS may be used to achieve the learning objectives in research that might not be available in the trainee's clinical role and supervisors should

encourage all trainees to take up this opportunity for a recommended one session per week for a year. The trainee may use the PDS to further develop a relevant clinical interest or address a learning need by gaining clinical experience at a specialist clinic (e.g., Adult ADHD, Eating Disorders, ASD assessment, neuropsychiatry including sleep disorders etc) or by obtaining a higher education (e.g., Post Graduate Certification) or leadership and management qualification (e.g. RCPsych Leadership and Management Scheme).

13.2. Benefits

GMC research has suggested that increased pressure on doctors has led to certain aspects of clinical service being prioritised at the expense of continuing professional development and reflection. These activities are important for the overall health system to operate efficiently and safely in the long term (*The state of medical education and practice in the UK 2018, GMC*).

Professional development sessions where training needs are protected from clinical pressures can mitigate these concerns, although the long-term benefits may be difficult to quantify. However, Professional Development Sessions should not replace training and supervision in the trainee's usual workplace, merely complement it.

Consultant psychiatrists are independent learners who undertake continuous professional development to ensure their practice utilises the latest knowledge and skills (*Continuing Professional Development, GMC*). The development of a personal development plan is key to building the skills required to identify learning needs and self-directed learning within the curriculum framework.

Consultant Psychiatrists often hold multiple professional roles and responsibilities (*Generic Professional Capabilities Framework, GMC*). To reflect this wide-ranging skill set Professional Development Sessions have a broad scope allowing trainees to advance clinical and non-clinical skills to support future practice.

A training programme with multiple connections to other areas of practice is desirable as it exposes trainees to patients whose needs cross specialty boundaries (*Adapting for the future, GMC*). Furthermore, the broad ecology of skills and knowledge fostered through the flexibility afforded in PDS contributes to making the consultant workforce of the future more resilient, diverse and responsive to patient needs.

For example, a trainee undertaking Balint leadership training, would be able to better supervise colleagues, assist in training future psychiatrists as well as gain a deeper understanding of their patients' psychological formulation.

Encouraging Excellence is a key principle of postgraduate curricula (*Excellence by Design, GMC*) and Professional development sessions should encourage trainees to realise their full potential. As they are personalised with a wide variety of educational opportunities available, these sessions will hopefully provide an

engaging and relevant educational experience leading to excellence in learning outcomes.

Professional Development Sessions may also benefit recruitment and retention. Trainees' highly value protected training time (*Supported and Valued, RCPsych*) and therefore less protected training time may exacerbate an already high attrition rate.

14. Study Leave

Current guidance on study leave [can be found here](#). Updated guidance for psychiatrists will be added in due course.

15. Annual Review of Competence Progression

This section deals with how ARCP panels review supporting evidence enabling them to arrive at a judgement of progress (known as an 'Outcome').

15.1. ARCP: What is its purpose?

The ARCP provides a formal process that reviews the evidence presented by the trainee and their educational supervisor relating to the trainee's progress in the training programme. It enables the trainee, the Head of School/Postgraduate Dean and employers to document that the capabilities required are being gained at an appropriate rate and through appropriate experience.

It should normally be undertaken on at least an annual basis for all trainees and with no more than a maximum interval of 15 months to facilitate revalidation. The process may be conducted more frequently if there is a need to deal with performance and progression issues or, where appropriate, to facilitate acceleration of training outside of the annual review.

The ARCP fulfils the following functions:

- It provides an effective mechanism for reviewing and recording the evidence related to a trainee's performance in the training programme or in a recognised training post (e.g., locum appointment for training (LAT) – Scotland only).
- At a minimum, it must incorporate a review of the trainee's educational portfolio including a structured report from the Educational Supervisor(s), documented assessments (as required by the specialty curriculum) and achievements.
- It provides a means whereby the evidence of the outcome of formal assessments, through a variety of GMC-approved workplace-based assessment tools and other assessment strategies (including examinations that are part of the programme of assessment), is coordinated and recorded to present a coherent record of a trainee's progress.

- It provides an effective mechanism for the review of out-of-programme experience and recording its contribution (where approved) to progress. It considers any time out of training during the assessment period and from entry to the programme and determines whether the training duration needs to be extended.
- As long as adequate documentation has been presented, it makes judgements about the capabilities acquired by trainees and their suitability to progress to the next stage of training.
- As long as adequate documentation has been presented, it makes judgements about the capabilities acquired by trainees in a LAT post (Scotland only) and documents these accordingly.
- It provides advice to the Responsible Officer (RO) about revalidation of the trainee across their full scope of work to enable the RO to make a recommendation to the GMC when required and ensures that any unresolved concerns about fitness to practise are acted on.
- It provides a final statement of the trainee's successful attainment of the curriculum capabilities including fulfilment of the GMC's standards in the Generic Professional Capabilities Framework for the programme and thereby the completion of the training programme.
- It enables the Postgraduate Dean to present evidence to the relevant College/Faculty so that it can recommend the trainee to the GMC for award of the CCT or CESR(CP).
- Where applicable, it provides comment and feedback on the quality of the structured Educational Supervisor's report.

15.2. ARCP Outcomes

The ARCP panel will recommend an outcome described below for each foundation/specialty/sub-specialty for each trainee, including those on integrated clinical/academic programmes.

The ARCP outcome should not be a surprise to the trainee, and trainees should be given some indication of their progress prior to the ARCP panel.

For dual training or main specialty and sub-specialty training, the GMC requires a separate outcome per specialty and sub-specialty.

It is recommended that members of the panel use a checklist to confirm that they have considered all the requirements and add any comments to explain the judgement.

While the ARCP panel must recommend the outcome for an individual trainee on the basis of the submitted evidence, it must also take into account any mitigating factors on the trainee's part such as personal circumstances.

When an Outcome 2, 3 or 4 recommendation is made by the ARCP panel, the Postgraduate Dean will confirm this in writing to the trainee, including where relevant their right to review or appeal the decision.

The ARCP process should be uniform throughout the UK and regional variations actively discouraged. Historically, variation in process has grown up through well-meaning attempts to improve quality in individual schools. However, this has

resulted in a plethora of local forms and expectations. Further information on our guidance for ARCPs can be found in our [ARCP recommendations paper](#).

16. Transferring between specialties

The Accreditation for Transferrable Competencies Framework (ATCF) has been replaced by the AoMRC's [Guidance for Flexibility in Postgraduate Training and Changing Specialties](#).

17. Applying for Consultant Psychiatry posts

Trainees are eligible to apply for a consultant post and may be interviewed up to six calendar months (WTE) prior to their anticipated CCT/CESR(CP) date if progress has been satisfactory and if it is anticipated that the final ARCP outcome will recommend that training is completed by the time the suggested CCT/CESR(CP) date is reached.

There may be instances when the six-month period is interrupted by statutory leave. In those circumstances, it is a decision for the potential employer as to whether the trainee is eligible for the consultant post. Once a doctor has been entered on the specialist register, they are able to take up a substantive, fixed-term or honorary consultant post in the NHS.

Where ARCP Outcome 6 is not subsequently issued and the trainee has already been appointed to a consultant post, the trainee will need to inform the employer immediately to discuss the possibility of deferring the start of employment to follow award of a CCT/CESR(CP).

There may be exceptional circumstances where there is a requirement for tailored training within the approved curriculum towards a specific post. An advance appointment longer than six months can then be justified where particular training requirements for the post have been identified that would need to be met in the latter stages of training leading to CCT/CESR(CP). Such circumstances would require authorisation by the appropriate health department and must be outlined in the recruitment documentation and agreed by the Postgraduate Dean. As an alternative approach, consideration could be given to achieving these capabilities within a post-CCT credential. Further information on credentialing will be developed in due course. The [GMC's Credentialing Framework can be viewed here](#).

18. Less Than Full-Time (LTFT) Training

18.1. Overview

HEE, NES, HEIW and NIMDTA have a strong commitment to helping all doctors in training to reach their full potential. All doctors in training can apply for LTFT training.

This guidance is drawn from the NHS Employers document [Principles Underpinning the New Arrangements for Flexible Training \(2005\)](#) and is supported by the [GMC's position statement on LTFT training \(2017\)](#).

Those in LTFT training must meet the same requirements in specialty and general practice training as those in full-time training, from which it will differ only in the possibility of limiting participation in medical activities by the number of hours worked per week.

The aims of LTFT training are to:

- retain in the workforce doctors who are unable or do not wish to continue their training on a full-time basis.
- promote career and personal development as well as work/life balance for doctors training in the NHS.
- ensure continued training in programmes on a time equivalence (pro rata) basis.

A balance needs to be maintained between LTFT training arrangements, the educational requirements of both full-time and LTFT trainees, and service need. As far as possible, Postgraduate Deans will seek to integrate LTFT training into full-time training by:

- using full-time posts for LTFT training placements.
- using slot shares.
- ensuring equity of access to study leave.
- developing permanent LTFT training placements and programmes where appropriate.

In exceptional circumstances, the Postgraduate Dean may consider the establishment of personal, individualised placements that are additional to those funded through routine contract arrangements, subject to training capacity, GMC approval and resources.

Trainees will:

- Reflect the same balance of work as their full-time colleagues. Day-time working, on-call and out-of-hours duties will normally be undertaken on a basis pro rata to that worked by full-time trainees in the same grade and specialty unless either operational circumstances at the employing organisation or the circumstances that justify LTFT training make this inappropriate or impossible, provided that legal and educational requirements are met.
- Normally move between placements within rotations on the same basis as full-time trainees.

Trainees on LTFT placements are not precluded from undertaking other work although they should ensure that in undertaking this work, they practise according

to the GMC's standards in Good Medical Practice and that this does not impact negatively on their training. By utilisation of their annual Form R submission, they should ensure that the Postgraduate Dean as their designated Responsible Officer is aware of all additional work undertaken within their remit of holding a licence to practise. Further information can be found on the [COPMeD webpages](#).

Decisions by HEE, NES, HEIW and NIMDTA only relate to educational support for the application. Employers/host training organisations must make a separate decision about the employment aspects of any request, including the proposed placement and any associated out-of-hours work. Contractual provisions are addressed in the [NHS Employers document Equitable Pay for Flexible Medical Training \(2005\)](#) and on their webpages regarding terms and conditions of service.

18.2. Eligibility for LTFT training

Employment legislation setting out the statutory right to request flexible working sets the recommended standards with which an employer must comply. The legislation does not set a priority order around reasons for requesting flexible working.

Building on the 2005 NHS Employers document Principles Underpinning the New Arrangements for Flexible Training, the Gold Guide should be considered as providing separate guidance to this legislation, in the context of requesting to undertake LTFT training in a training programme. This reflects the tripartite nature of current practice of supporting LTFT training between the trainee, HEE, NES, HEIW or NIMDTA and the employer/host training organisation.

For further information on LTFT training, please see the Gold Guide.

19. Academic training, research and higher degrees

All of the specialty training curricula require trainees to understand the important value and purpose of medical research, and to develop the skills and attributes needed to critically assess research evidence. We have highlighted the core skills required under HLO 9 in all curricula. In addition, some trainees will wish to consider or develop a career in academic medicine and may wish to explore this by undertaking a period of academic training (in either research or education) during their clinical training. The following web links provide important advice on pursuing an academic clinical career:

- [National Institute for Health Research Integrated Academic Training](#)
- [NHS Scotland | Scottish Academic Training \(SCREDS\)](#)
- [HEIW | Academic Medicine](#)
- [NIMDTA | Academic Training](#)
- [Academy of Medical Sciences](#)
- [Psych Star Scheme](#)
- [Clinical Academic posts](#)
- [Out of Programme \(Research\), which includes PhDs and additional research opportunities](#)

Such opportunities are available through two main routes:

Option 1: Trainees can compete for opportunities to enter integrated combined academic and clinical programmes.¹⁰ Those who are appointed to such posts will need to meet the clinical requirements for appointment if they are not already in specialty training, as well as the academic requirements. Examples of integrated academic training include academic foundation programmes.

Option 2: Trainees can take time out of their specialty training programme for a period of time entirely focused on research leading to either an MD or PhD (time out of programme for research (OOPR), with the agreement of the TPD and Postgraduate Dean. Trainees will continue to hold their training number/contract during this time out of their clinical programme. (Other routes may be available to trainees in certain specialties such as public health.)

For more information, please view the Gold Guide.

20. Training: Protected Characteristics

20.1. Doctors with Protected Characteristics

[The Equality Act \(2010\)](#) outlines protected characteristics as follows:

- Age
- Disability
- Gender reassignment
- Marriage and civil partnership
- Pregnancy and maternity
- Race
- Religion or belief
- Sex
- Sexual orientation

The curricula are designed to be broad and flexible, allowing trainees flexibility in developing their capabilities. We expect trainees and trainers to take responsibility for ensuring protected characteristics are taken into account, and that reasonable adjustments are made where possible. Trainees who anticipate that a protected characteristic(s) will have a potential impact on their training should discuss this with their Educational Supervisor in the first instance. Supervisors are expected to ensure that adjustments are made so that trainees can undertake and complete curricula requirements.

Postgraduate Deans, programme directors and FSDs are required to tailor individual specialty training programmes to help doctors with disabilities to meet the requirements for satisfactory completion. The outcomes set out in the curriculum should be assessed to the same standard but reasonable adjustments may need to be made to the method of education, training and assessment.

Employers must make reasonable adjustments if disabled appointees require these. The need to do so should not be a reason for not offering an otherwise

suitable placement. They should also take into account the assessments of progress and individual appointee's educational needs wherever possible.

Applicants should inform their programme director and employer at an early stage so that a suitable rotation can be identified.

All trainees who are unable to train and work on health grounds should be managed in the first instance under their employer's occupational health arrangements and are eligible through their employer for statutory sickness absence and pay, which is dependent on their length of service.

Postgraduate Deans/Deputies will review any health matters (including occupational health advice) with trainees to ensure appropriate decisions are made regarding training.

All trainees with a full licence to practise, including those who are unable to train or work on health grounds, must comply with the requirements for revalidation and submit Form R annually.

20.2. Absences from training and impact on certification (or completion) date

Absences from training (including OOP not approved towards training), other than for study leave or annual leave, may have an impact on a doctor's ability to demonstrate competence/capability and progression through the curriculum. The GMC has therefore determined that within each 12-month period where a trainee has been absent for a total of 14 days or more (when a trainee would normally be at work), a review will be triggered of whether the trainee needs to have their core training programme end date or CCT/CESR(CP) date extended. Generally, when a trainee returns from extended planned leave e.g. maternity leave, they should get their revised CCT date using the [RCPsych CCT calculator](#) and upload it to their eportfolio.

Where trainees returning from statutory leave (e.g., maternity/paternity/fostering/adoption leave) have been able to account for unused annual leave, in accordance with the GMC's 2012 position statement on time out of training, this may impact on the core training programme end date or CCT/CESR(CP) date when this is reviewed at the ARCP.

The GMC's Good Medical Practice states that it is the responsibility of each individual trainee to be honest and open, and to act with integrity. As such, trainees should ensure that HEE, NES, HEIW or NIMDTA are aware of their absences through the relevant reporting processes. This information will be shared with the relevant College/ Faculty and the GMC.

21. Inter-deanery Transfer (IDT)

The national **inter-deanery transfer** (IDT) process has been put in place to support medical trainees who have had an unforeseen significant change in circumstances since commencement of their current training programme that remains at the date of their IDT application. Trainees are able to submit an application and required supporting documents in one of the two transfer windows that take place each year.

The national IDT eligibility criteria, application guides, supporting document templates and FAQs can be found at Inter Deanery Transfers. Trainees should familiarise themselves with these documents before applying as only applications that meet the eligibility criteria, including the supporting document requirements, can be considered for a transfer.

While it is possible for trainees to move between HEE, NES, HEIW and NIMDTA (via IDTs), there is no automatic entitlement or right for this to take place. Trainees will be expected to provide evidence that they have well-founded reasons for needing to move and that it is not tenable for them to remain in their current training programme.

Transfers are contingent on the availability of a funded training post and a training number/contract in the receiving locality in HEE, NES, HEIW or NIMDTA. Post funding and the training number/contract do not follow the trainee.

Transfers will only be considered during two time period windows each year, which will be advertised in advance. The timing of these windows allows trainees, who may be required to give three months' notice, sufficient time to do so if transferring to posts commencing in August and February.

Start dates for posts will be agreed between the transferring/receiving locality in HEE, NES, HEIW or NIMDTA and the trainee. Requests to transfer will not be considered outside of these windows except in very exceptional circumstances. It would be expected that any trainee transferring as part of this process would have appropriate educational review normally in the form of an ARCP prior to transfer.

There are situations where trainees will move across national or local office boundaries without requiring an IDT:

- **Educational or training reasons** - HEE, NES, HEIW and NIMDTA should provide a full range of programmes and placements for the specialties in which they offer training (or have formal arrangements for doing so that are not dependent on ad hoc transfer arrangements).
- **Secondment to a different locality in HEE, NES, HEIW or NIMDTA** - This would normally be undertaken as OOPT, and such moves would be planned to fit in with the agreed training programme and training availability. Trainees would keep their original training number/contract.
- **Rotation between HEE, NES, HEIW and NIMDTA as part of a planned training programme** - This arrangement applies in some specialties and across placements in HEE, NES, HEIW and NIMDTA because of local

arrangements or to support access to appropriate training in some specialties.

- **Undertaking research in a different locality in HEE, NES, HEIW or NIMDTA** - Trainees given permission by their Postgraduate Dean to take OOPR will retain their home training number/contract even if research takes place in a different locality in HEE, NES, HEIW or NIMDTA. Trainees will have no entitlement to transfer subsequently to the locality in HEE, NES, HEIW or NIMDTA in which they have been doing their research but will need to go through either the IDT request process (and meet the requirements of eligibility) or a competitive process.
- **Undertaking sub-specialty training in a different locality in HEE, NES, HEIW or NIMDTA** - Trainees who are successful in being appointed to a sub-specialty training programme in a different locality in HEE, NES, HEIW or NIMDTA will usually have no entitlement to transfer. They will remain under the management of the home locality in HEE, NES, HEIW or NIMDTA and return there after completion of the sub-specialty training.

Further information is outlined in the Gold Guide.

We hope you find the above information useful, however please don't hesitate to contact your PS or ES, or TPD, and the College if you have any further queries via specialtytraining@rcpsych.ac.uk.

Acknowledgements

We would like to thank the following people for their contribution to the development of the 2022 curriculum framework:

RCPsych Curricula Project Management Team

Dr John Russell, Associate Dean for Curricula, Chair of Curricula Revision Working Group and Curriculum & Assessment Committee
Pauline Whitelaw, Curricula & Quality Assurance Manager (from June 2019)
Nikki Cochrane, Head of Training and Workforce
Julian Ryder, Interim Head of Training and Workforce (until August 2019)
Molly Baker, Curricula & Quality Assurance Coordinator (from February 2021)
Alice Simpson, Curricula & Quality Coordinator (until January 2020)
Tony Roche, Curricula & Quality Manager (until June 2019)

Curriculum Revision Working Group

Dr Israel Adebekun, Associate Dean for Trainee Support
Dr Alex Bailey, Chair, Old Age Psychiatry Specialty Advisory Committee
Dr Mary Barrett, Chair, Psychiatry of Intellectual Disability Specialty Advisory Committee
Dr Rahul Bhattacharya, Member, Examinations Sub-Committee
Dr William Burbridge-James, Chair, Medical Psychotherapy Specialty Advisory Committee
Professor Nandini Chakraborty, Associate Dean for Equivalence
Dr Tom Clark, Chair, Forensic Psychiatry Specialty Advisory Committee
Dr Subodh Dave, Associate Dean for Trainee Support
Dr Suyog Dhakras, Chair, Child and Adolescent Psychiatry Specialty Advisory Committee
Dr Paul Emerson, Specialist Advisor for Portfolio Online
Dr Josanne Holloway, Member, Examinations Sub-Committee
Dr Yvonne Hurst, Educationalist, Royal College of Surgeons Edinburgh
Dr Akshay Kansagra, Core Trainee Representative, Psychiatric Trainees Committee
Dr Rajesh Mohan, Presidential Lead for Race and Equality
Ms Veryan Richards, Patient and Carer Representative
Dr Ross Runciman, Chair, Psychiatric Trainees Committee
Dr Subulade Smith, Presidential Lead for Race and Equality
Dr Indira Vinjamuri, Chair, Adult Psychiatry Specialty Advisory Committee

Support and Advice

Dr Kate Lovett, Dean, Royal College Psychiatrists
Professor Wendy Burn, President, Royal College of Psychiatrists (until June 2020)
Dr Adrian James, President, Royal College of Psychiatrists (from June 2020)
Education & Training Committee
Curriculum and Assessment Committee
Psychiatric Trainees Committee
Sonia Walter, Director of Professional Standards
Fauzan Palekar, Director of Professional Standards (to August 2019)

Kimberley Archer, Approvals Operations Manager, General Medical Council
Richard Filby-Aziz, Curriculum Development and Support Manager, General Medical Council
Dr Susie Gibbs, CAMHS/ID Consultant, Fife
Roswitha Dharampal, Dinwoodie Research Fellowship

RCPsych Specialty Training Team

Kathryn Squire, Specialty Training Manager, Royal College of Psychiatrists
Elizabeth Boxall, CESR Coordinator, Royal College of Psychiatrists

In addition, we would like to thank the following committees, working groups and Faculties for their contribution and feedback:

Specialty Advisory Committees (SACs)

General (Adult) Psychiatry
Child & Adolescent Psychiatry

Appendix 2 – Supervision in Psychiatry

Supervision Area	Clinical Supervision	Psychiatric Supervision	Educational Supervision
Who is eligible to supervise?	<p>Appropriately qualified and experienced senior psychiatrist.</p> <p>SAS doctors who meet the appropriate requirements set out in the GMC evidence framework can supervise <i>core trainees</i>.</p>	Nominated substantive consultant on the specialist register in Psychiatry.	<p>Usually a Consultant Psychiatrist, Senior Lecturer or Professor, who has been appointed to a substantive consultant psychiatry position.</p> <p>SAS doctors with sufficient experience can undertake the role where appropriate.</p> <p>Requires specific experience and training for the role, and are expected to maintain educational CPD.</p>
Supervision Responsibility & Frequency	Day-to-day awareness of nominated clinical supervisor in all clinical situations.	<p>Regular 1:1 supervision, often a nominated consultant who is also providing clinical and sometimes educational supervision.</p> <p>Recommended 1 hour per week for trainees.</p>	<p>Responsible for educational supervision for one or more trainees (no more than five trainees).</p> <p>Two meetings per year.</p>
Protected time requirements	Recommended 0.25PA per week per trainee.	Recommended 0.25PA per week per trainee protected time.	Recommended 0.125PA per trainee per week.
Supervision Level	Required for all trainees throughout core and higher training. Clinical supervision	Required for all trainees throughout core and higher training.	Required for all trainees throughout core and higher training.

	should be tailored to ensure patient safety and meet the developmental needs of individual trainees.		
Purpose	Aim – to ensure patient safety and support clinical teaching and training.	Aim – to support professional development of psychiatrists in training. Supports strategies for developing resilience, well-being and maintaining appropriate professional boundaries, as well as developing sophisticated understanding of therapeutic relationships and psychodynamic aspects of the work. The role also includes pastoral, developmental, leadership and containing elements.	Aim – to support and monitor educational progress. Works with individual trainees to develop and facilitate an individual learning plan to develop curriculum competencies.
Delegation	Clinical supervision can be delegated to other suitably qualified doctors or members of the clinical team including non-medical staff providing the role is understood and trainee aware.	Psychiatric supervision must not delegate to others expect in exceptional situations of unplanned absence where arrangements must be made for a substantive consultant to provide weekly 1:1 supervision	The educational supervisor liaises with local Training Programme Director, college tutor and other members of department to ensure awareness of a trainee’s training needs and that resources are in place to meet these.
Assessments	May perform WPBAs for trainee, if suitably qualified.	Responsible for producing the Psychiatric Supervision Report (PSR).	Oversees plan to complete WPBAs.

		Responsible for developing placement specific Personal Development Plans (PDPs) with their trainees, in collaboration with trainee and educational supervisor.	Responsible for producing Educational Supervisor Report (ESR) annually for trainees.
CPD and recognition of trainer status	Must attend relevant local training for recognition of trainer status. This is typically run by Postgraduate Deaneries or equivalent bodies.	Competencies developed during full postgraduate training in psychiatry. In addition, psychiatric supervisors are encouraged to undertake further training and attend updates run by RCPsych.	Must attend relevant local training for recognition of trainer status. This is typically run by Postgraduate Deaneries or equivalent bodies.
